

2007 New Zealand Curriculum

This includes additional sections that have been developed since the publication of *The New Zealand Curriculum*:

- the revised technology learning area
- the Aotearoa New Zealand's histories curriculum content in social sciences
- updated guidance on the legislative framework (to replace pg. 43)
- a transitional statement on board requirements (to replace pg. 44)
- curriculum statement documents relating to new reading writing and maths requirements

teaching and learning
in years 1–13

The curriculum nautilus

Since it first appeared on the cover of *The New Zealand Curriculum Framework* in 1993, the nautilus has become a familiar symbol for the New Zealand Curriculum. It reappears in this curriculum with a new look.

In real life, the nautilus is a marine animal with a spiral shell. The shell has as many as thirty chambers lined with nacre (mother-of-pearl). The nautilus creates a new chamber as it outgrows each existing one, the successive chambers forming what is known as a logarithmic spiral. This kind of spiral appears elsewhere in nature, for example, in sunflower and cauliflower heads, cyclones, and spiral galaxies.

Physician, writer, and poet Oliver Wendell Holmes (1809–94) saw the spiral shell of the nautilus as a symbol of intellectual and spiritual growth. He suggested that people outgrew their protective shells and discarded them as they became no longer necessary: “One’s mind, once stretched by a new idea, never regains its original dimensions.”

It is as a metaphor for growth that the nautilus is used as a symbol for the New Zealand Curriculum.

The New Zealand Curriculum

Foreword

Tēnā koutou katoa

It is my pleasure to introduce this revision of the New Zealand Curriculum. Like its predecessors, it is the work of many people who are committed to ensuring that our young people have the very best of educational opportunities.

The previous curriculum, implemented from 1992 onwards, was our first outcomes-focused curriculum: a curriculum that sets out what we want students to know and to be able to do. Since it was launched, there has been no slowing of the pace of social change. Our population has become increasingly diverse, technologies are more sophisticated, and the demands of the workplace are more complex. Our education system must respond to these and the other challenges of our times. For this reason, a review of the curriculum was undertaken in the years 2000–02.

Following this review, Cabinet agreed that the national curriculum should be revised. A widely representative reference group oversaw a development process that included trials in schools, collaborative working parties, online discussions, and an inquiry into relevant national and international research. This process led to the publication of *The New Zealand Curriculum: Draft for Consultation 2006*. The Ministry of Education received more than 10 000 submissions in response. These were collated and analysed and were taken into consideration when the document that you now have in your hands was being written.

The New Zealand Curriculum is a clear statement of what we deem important in education. It takes as its starting point a vision of our young people as lifelong learners who are confident and creative, connected, and actively involved. It includes a clear set of principles on which to base curriculum decision making. It sets out values that are to be encouraged, modelled, and explored. It defines five key competencies that are critical to sustained learning and effective participation in society and that underline the emphasis on lifelong learning.

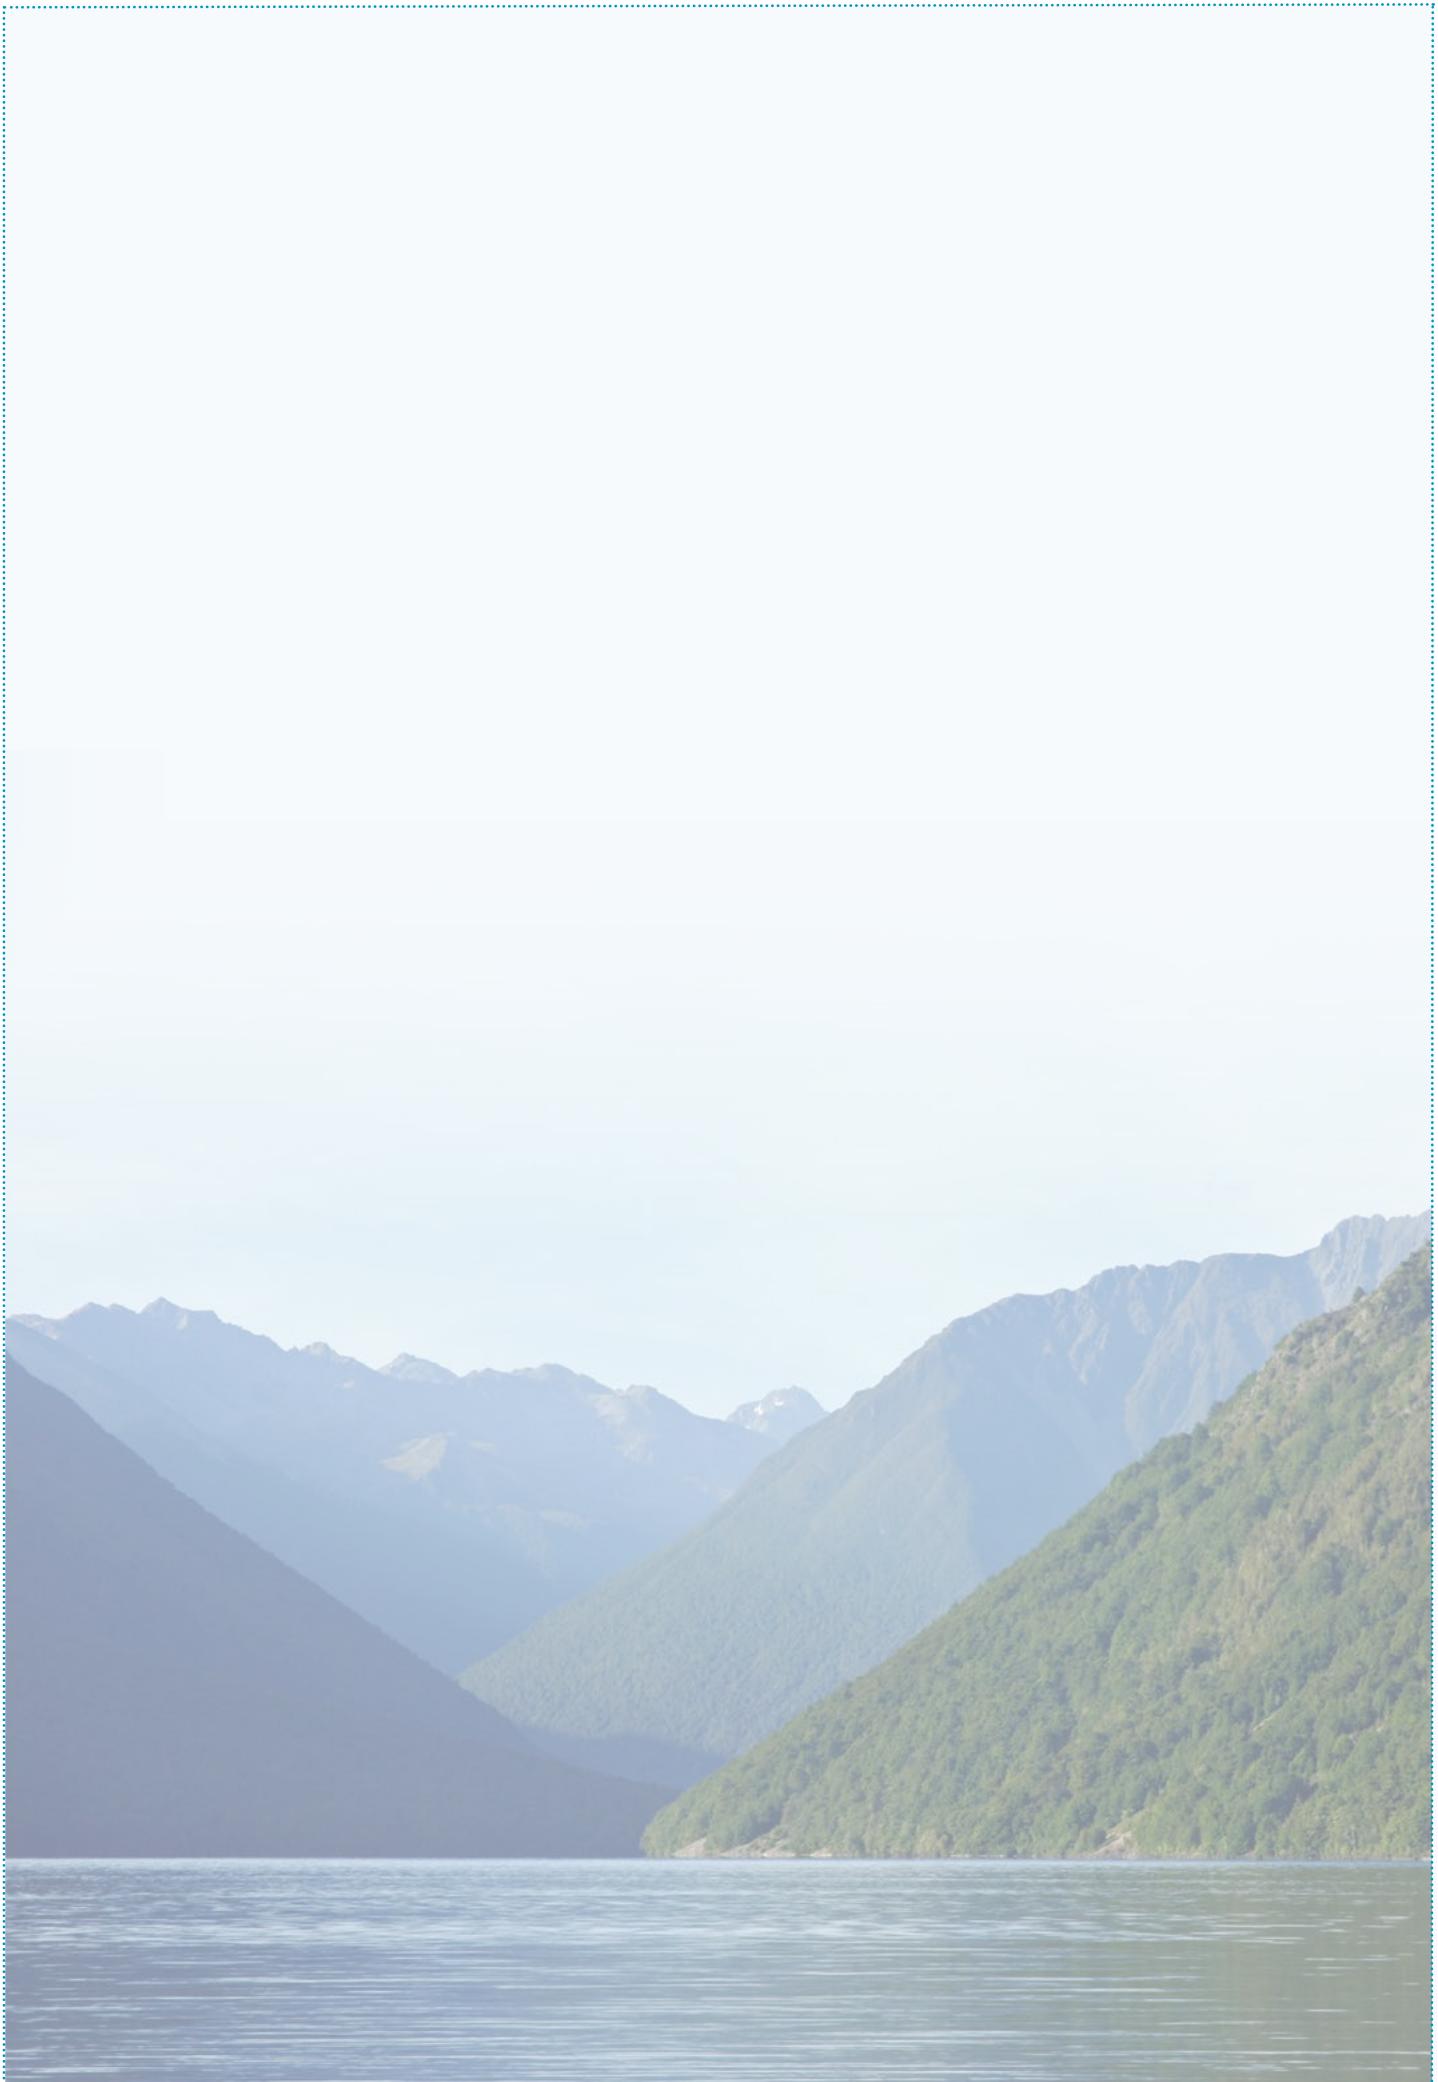

The New Zealand Curriculum states succinctly what each learning area is about and how its learning is structured. The sets of achievement objectives have been carefully revised by teams of academics and teachers to ensure that they are current, relevant, and well-defined outcomes for students. A new learning area, learning languages, has been added to encourage students to participate more actively in New Zealand's diverse, multicultural society and in the global community.

My thanks go to all who have contributed to the development of *The New Zealand Curriculum*: members of the reference group, teachers, principals, school boards, parents, employer representatives, curriculum associations, education sector bodies, academics, and the wider community. You can be proud of the part you have played in creating this sound framework for teaching and learning; a framework designed to ensure that all young New Zealanders are equipped with the knowledge, competencies, and values they will need to be successful citizens in the twenty-first century.

The challenge now is to build on this framework, offering our young people the most effective and engaging teaching possible and supporting them to achieve to the highest of standards.

Nāku noa

Karen Sewell
Secretary for Education

Purpose and Scope

A statement of official policy

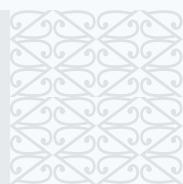

The New Zealand Curriculum is a statement of official policy relating to teaching and learning in English-medium New Zealand schools. Its principal function is to set the direction for student learning and to provide guidance for schools as they design and review their curriculum. A parallel document, *Te Marautanga o Aotearoa*, will serve the same function for Māori-medium schools. Although they come from different perspectives, both start with visions of young people who will develop the competencies they need for study, work, and lifelong learning and go on to realise their potential. Together, the two documents will help schools give effect to the partnership that is at the core of our nation's founding document, *Te Tiriti o Waitangi* / the Treaty of Waitangi.

The New Zealand Curriculum applies to all English-medium state schools (including integrated schools) and to all students in those schools, irrespective of their gender, sexuality, ethnicity, belief, ability or disability, social or cultural background, or geographical location. The term "students" is used throughout in this inclusive sense unless the context clearly relates to a particular group.

Schools that also offer Māori-medium programmes may use *Te Marautanga o Aotearoa* as the basis for such programmes.

Overview

A schematic view of this document

The New Zealand Curriculum

Directions for Learning

Vision

Young people who will be confident, connected, actively involved, lifelong learners.

Values

Excellence; Innovation, inquiry, and curiosity; Diversity; Equity; Community and participation; Ecological sustainability; Integrity; Respect.

Key Competencies

Thinking; Using language, symbols, and texts; Managing self; Relating to others; Participating and contributing.

Learning Areas

English; The arts; Health and physical education; Learning languages; Mathematics and statistics; Science; Social sciences; Technology. Official languages

Achievement Objectives

Principles

High expectations, Treaty of Waitangi, Cultural diversity, Inclusion, Learning to learn, Community engagement, Coherence, Future focus

The School Curriculum

Vision

What we want for
our young people

Our vision is for young people:

- who will be creative, energetic, and enterprising;
- who will seize the opportunities offered by new knowledge and technologies to secure a sustainable social, cultural, economic, and environmental future for our country;
- who will work to create an Aotearoa New Zealand in which Māori and Pākehā recognise each other as full Treaty partners, and in which all cultures are valued for the contributions they bring;
- who, in their school years, will continue to develop the values, knowledge, and competencies that will enable them to live full and satisfying lives;
- who will be confident, connected, actively involved, and lifelong learners.

Confident

Positive in their own identity
Motivated and reliable
Resourceful
Enterprising and entrepreneurial
Resilient

Connected

Able to relate well to others
Effective users of communication tools
Connected to the land and environment
Members of communities
International citizens

Actively involved

Participants in a range of life contexts
Contributors to the well-being of New Zealand –
social, cultural, economic, and environmental

Lifelong learners

Literate and numerate
Critical and creative thinkers
Active seekers, users, and creators of knowledge
Informed decision makers

Principles

Foundations of curriculum decision making

The principles set out below embody beliefs about what is important and desirable in school curriculum – nationally and locally. They should underpin all school decision making.

These principles put students at the centre of teaching and learning, asserting that they should experience a curriculum that engages and challenges them, is forward-looking and inclusive, and affirms New Zealand's unique identity.

Although similar, the principles and the values have different functions. The principles relate to how curriculum is formalised in a school; they are particularly relevant to the processes of planning, prioritising, and review. The values are part of the everyday curriculum – encouraged, modelled, and explored.

All curriculum should be consistent with these eight statements:

High expectations

The curriculum supports and empowers all students to learn and achieve personal excellence, regardless of their individual circumstances.

Treaty of Waitangi

The curriculum acknowledges the principles of the Treaty of Waitangi and the bicultural foundations of Aotearoa New Zealand. All students have the opportunity to acquire knowledge of te reo Māori me ōna tikanga.

Cultural diversity

The curriculum reflects New Zealand's cultural diversity and values the histories and traditions of all its people.

Inclusion

The curriculum is non-sexist, non-racist, and non-discriminatory; it ensures that students' identities, languages, abilities, and talents are recognised and affirmed and that their learning needs are addressed.

Learning to learn

The curriculum encourages all students to reflect on their own learning processes and to learn how to learn.

Community engagement

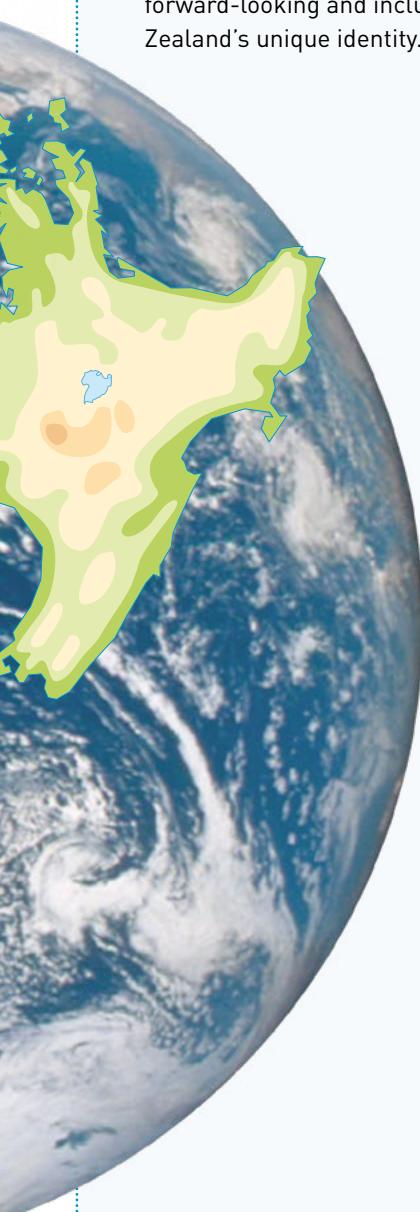

The curriculum has meaning for students, connects with their wider lives, and engages the support of their families, whānau, and communities.

Coherence

The curriculum offers all students a broad education that makes links within and across learning areas, provides for coherent transitions, and opens up pathways to further learning.

Future focus

The curriculum encourages students to look to the future by exploring such significant future-focused issues as sustainability, citizenship, enterprise, and globalisation.

Values

To be encouraged,
modelled, and explored

Values are deeply held beliefs about what is important or desirable. They are expressed through the ways in which people think and act.

Every decision relating to curriculum and every interaction that takes place in a school reflects the values of the individuals involved and the collective values of the institution.

The values on the list below enjoy widespread support because it is by holding these values and acting on them that we are able to live together and thrive. The list is neither exhaustive nor exclusive.

Students will be encouraged to value:

- **excellence**, by aiming high and by persevering in the face of difficulties;
- **innovation, inquiry, and curiosity**, by thinking critically, creatively, and reflectively;
- **diversity**, as found in our different cultures, languages, and heritages;
- **equity**, through fairness and social justice;
- **community and participation** for the common good;
- **ecological sustainability**, which includes care for the environment;
- **integrity**, which involves being honest, responsible, and accountable and acting ethically;

and to **respect** themselves, others, and human rights.

The specific ways in which these values find expression in an individual school will be guided by dialogue between the school and its community. They should be evident in the school's philosophy, structures, curriculum, classrooms, and relationships. When the school community has developed strongly held and clearly articulated values, those values are likely to be expressed in everyday actions and interactions within the school.

Through their learning experiences, students will learn about:

- their own values and those of others;
- different kinds of values, such as moral, social, cultural, aesthetic, and economic values;
- the values on which New Zealand's cultural and institutional traditions are based;
- the values of other groups and cultures.

Through their learning experiences, students will develop their ability to:

- express their own values;
- explore, with empathy, the values of others;
- critically analyse values and actions based on them;
- discuss disagreements that arise from differences in values and negotiate solutions;
- make ethical decisions and act on them.

All the values listed above can be expanded into clusters of related values that collectively suggest their fuller meanings. For example, *community and participation for the common good* is associated with values and notions such as peace, citizenship, and manaakitanga.

Key Competencies

Capabilities for living and lifelong learning

The New Zealand Curriculum identifies five key competencies:

- thinking
- using language, symbols, and texts
- managing self
- relating to others
- participating and contributing.

People use these competencies to live, learn, work, and contribute as active members of their communities. More complex than skills, the competencies draw also on knowledge, attitudes, and values in ways that lead to action. They are not separate or stand-alone. They are the key to learning in every learning area.

The development of the competencies is both an end in itself (a goal) and the means by which other ends are achieved. Successful learners make use of the competencies in combination with all the other resources available to them. These include personal goals, other people, community knowledge and values, cultural tools (language, symbols, and texts), and the knowledge and skills found in different learning areas. As they develop the competencies, successful learners are also motivated to use them, recognising when and how to do so and why.

Opportunities to develop the competencies occur in social contexts. People adopt and adapt practices that they see used and valued by those closest to them, and they make these practices part of their own identity and expertise.

The competencies continue to develop over time, shaped by interactions with people, places, ideas, and things. Students need to be challenged and supported to develop them in contexts that are increasingly wide-ranging and complex.

Thinking

Thinking is about using creative, critical, and metacognitive processes to make sense of information, experiences, and ideas. These processes can be applied to purposes such as developing understanding, making decisions, shaping actions, or constructing knowledge. Intellectual curiosity is at the heart of this competency.

Students who are competent thinkers and problem-solvers actively seek, use, and create knowledge. They reflect on their own learning, draw on personal knowledge and intuitions, ask questions, and challenge the basis of assumptions and perceptions.

Using language, symbols, and texts

Using language, symbols, and texts is about working with and making meaning of the codes in which knowledge is expressed. Languages and symbols are systems for representing and communicating information, experiences, and ideas. People use languages and symbols to produce texts of all kinds: written, oral/aural, and visual; informative and imaginative; informal and formal; mathematical, scientific, and technological.

Students who are competent users of language, symbols, and texts can interpret and use words, number, images, movement, metaphor, and technologies in a range of contexts. They recognise how choices of language, symbol, or text affect people's understanding and the ways in which they respond to communications. They confidently use ICT (including, where appropriate, assistive technologies) to access and provide information and to communicate with others.

Managing self

This competency is associated with self-motivation, a "can-do" attitude, and with students seeing themselves as capable learners. It is integral to self-assessment.

Students who manage themselves are enterprising, resourceful, reliable, and resilient. They establish personal goals, make plans, manage projects, and set high standards. They have strategies for meeting challenges. They know when to lead, when to follow, and when and how to act independently.

Relating to others

Relating to others is about interacting effectively with a diverse range of people in a variety of contexts. This competency includes the ability to listen actively, recognise different points of view, negotiate, and share ideas.

Students who relate well to others are open to new learning and able to take different roles in different situations. They are aware of how their words and actions affect others. They know when it is appropriate to compete and when it is appropriate to co-operate. By working effectively together, they can come up with new approaches, ideas, and ways of thinking.

Participating and contributing

This competency is about being actively involved in communities. Communities include family, whānau, and school and those based, for example, on a common interest or culture. They may be drawn together for purposes such as learning, work, celebration, or recreation. They may be local, national, or global. This competency includes a capacity to contribute appropriately as a group member, to make connections with others, and to create opportunities for others in the group.

Students who participate and contribute in communities have a sense of belonging and the confidence to participate within new contexts. They understand the importance of balancing rights, roles, and responsibilities and of contributing to the quality and sustainability of social, cultural, physical, and economic environments.

Official Languages

English

Te Reo Māori

New Zealand Sign Language

Te reo Māori and New Zealand Sign Language (NZSL) are official languages of New Zealand.¹ English, the medium for teaching and learning in most schools, is a de facto official language by virtue of its widespread use. For these reasons, these three languages have special mention in *The New Zealand Curriculum*.

Te Reo Māori

Ko te reo te manawa pou o te Māori,

Ko te ihi te waimanawa o te tangata,

Ko te roimata, ko te hūpē te waiaroha.

Ko tōku nui, tōku wehi, tōku whakatiketike, tōku reo.

Te reo Māori is indigenous to Aotearoa New Zealand. It is a taonga recognised under the Treaty of Waitangi, a primary source of our nation's self-knowledge and identity, and an official language. By understanding and using te reo Māori, New Zealanders become more aware of the role played by the indigenous language and culture in defining and asserting our point of difference in the wider world.

*Ko te reo Māori te kākahu o te whakaaro,
te huarahi i te ao tūroa.*

By learning te reo and becoming increasingly familiar with tikanga, Māori students strengthen their identities, while non-Māori journey towards shared cultural understandings. All who learn te reo Māori help to secure its future as a living, dynamic, and rich language. As they learn, they come to appreciate that diversity is a key to unity.

Te reo Māori underpins Māori cultural development and supports Māori social and economic development in Aotearoa New Zealand and internationally.

Understanding te reo Māori stretches learners cognitively, enabling them to think in different ways and preparing them for leadership.

By learning te reo Māori, students are able to:

- participate with understanding and confidence in situations where te reo and tikanga Māori predominate and to integrate language and cultural understandings into their lives;
- strengthen Aotearoa New Zealand's identity in the world;
- broaden their entrepreneurial and employment options to include work in an ever-increasing range of social, legal, educational, business, and professional settings.

Ko te manu e kai ana i te miro, nōna te ngahere.

Ko te manu e kai ana i te mātauranga, nōna te ao.

Ko te reo te mauri o te mana Māori.

All three may be studied as first or additional languages. They may also be the medium of instruction across all learning areas. Requirements for the teaching of English are outlined on page 18. Guidelines specific to the learning of te reo Māori and NZSL (published separately) provide detailed information for schools that choose to offer them.

New Zealand Sign Language

Unique to New Zealand, NZSL is a complete visual-gestural language with its own grammar, vocabulary, and syntax. Like other signed languages, it uses the hands, the body, and facial expressions (including lip patterns) to express meaning and the eyes to perceive meaning. Like any language, it is capable of communicating an infinite number of ideas. Face-to-face interaction is particularly important in NZSL because it has no written form. There are, however, notation systems that are used for recording signs on paper.

NZSL is primarily used by members of New Zealand's Deaf community and those affiliated in some way with this community, for example, hearing people who have Deaf relatives or people (such as interpreters) who work with Deaf people.

For many Deaf people, NZSL is essential for effective daily communication and interactions. New Zealand needs more people who are fluent users of the language and who have an appreciation of Deaf culture. By learning NZSL, hearing students are able to communicate with their Deaf peers and participate in the Deaf community. Skilled communicators may find career opportunities that involve working with Deaf people. As Deaf people come to have a wider circle to converse with, our society becomes more inclusive.

Learning NZSL can be a positive and enriching experience for both deaf and hearing people of any age. By learning NZSL, Deaf children and hearing children of Deaf parents gain a sense of belonging in the Deaf community.

For hearing students who wish to learn a second or subsequent language, NZSL may be offered as another option alongside the spoken languages offered by their school. In such cases, schools need to consult with their Deaf communities and ensure that, wherever possible, students have access to Deaf role models with NZSL as their first language. Learners need to have opportunities for sustained conversations with other users of NZSL, and they need to be exposed to language role models in a variety of situations.

¹The Māori Language Act 1987 and the New Zealand Sign Language Act 2006

Learning Areas

Important for a broad, general education

The New Zealand Curriculum specifies eight learning areas: English, the arts, health and physical education, learning languages, mathematics and statistics, science, social sciences, and technology.

The learning associated with each area is part of a broad, general education and lays a foundation for later specialisation. Like the key competencies, this learning is both end and means: valuable in itself and valuable for the pathways it opens to other learning.

While the learning areas are presented as distinct, this should not limit the ways in which schools structure the learning experiences offered to students. All learning should make use of the natural connections that exist between learning areas and that link learning areas to the values and key competencies.

■ Learning areas and language

Each learning area has its own language or languages. As students discover how to use them, they find they are able to think in different ways, access new areas of knowledge, and see their world from new perspectives.

For each area, students need specific help from their teachers as they learn:

- the specialist vocabulary associated with that area;
- how to read and understand its texts;
- how to communicate knowledge and ideas in appropriate ways;
- how to listen and read critically, assessing the value of what they hear and read.

In addition to such help, students who are new learners of English or coming into an English-medium environment for the first time need explicit and extensive teaching of English vocabulary, word forms, sentence and text structures, and language uses.

As language is central to learning and English is the medium for most learning in the New Zealand Curriculum, the importance of literacy in English cannot be overstated.

In **English**, students study, use, and enjoy language and literature communicated orally, visually, or in writing.

In **the arts**, students explore, refine, and communicate ideas as they connect thinking, imagination, senses, and feelings to create works and respond to the works of others.

In **health and physical education**, students learn about their own well-being, and that of others and society, in health-related and movement contexts.

In **learning languages**, students learn to communicate in an additional language, develop their capacity to learn further languages, and explore different world views in relation to their own.

In **mathematics and statistics**, students explore relationships in quantities, space, and data and learn to express these relationships in ways that help them to make sense of the world around them.

In **science**, students explore how both the natural physical world and science itself work so that they can participate as critical, informed, and responsible citizens in a society in which science plays a significant role.

In the **social sciences**, students explore how societies work and how they themselves can participate and take action as critical, informed, and responsible citizens.

In **technology**, students learn to be innovative developers of products and systems and discerning consumers who will make a difference in the world.

English

*Ko te reo te tuakiri
Ko te reo tōku ahurei
Ko te reo te ora.*

■ What is English about?

English is the study, use, and enjoyment of the English language and its literature, communicated orally, visually, and in writing, for a range of purposes and audiences and in a variety of text forms. Learning English encompasses learning the language, learning through the language, and learning about the language.

Understanding, using, and creating oral, written, and visual texts of increasing complexity is at the heart of English teaching and learning. By engaging with text-based activities, students become increasingly skilled and sophisticated speakers and listeners, writers and readers, presenters and viewers.

■ Why study English?

Literacy in English gives students access to the understanding, knowledge, and skills they need to participate fully in the social, cultural, political, and economic life of New Zealand and the wider world. To be successful participants, they need to be effective oral, written, and visual communicators who are able to think critically and in depth.

By understanding how language works, students are equipped to make appropriate language choices and apply them in a range of contexts. Students learn to deconstruct and critically interrogate texts in order to understand the power of language to enrich and shape their own and others' lives.

Students appreciate and enjoy texts in all their forms. The study of New Zealand and world literature contributes to students' developing sense of identity, their awareness of New Zealand's bicultural heritage, and their understanding of the world.

Success in English is fundamental to success across the curriculum. All learning areas (with the possible exception of languages) require students to receive, process, and present ideas or information using the English language as a medium. English can be studied both as a heritage language and as an additional language.

English presents students with opportunities to engage with and develop the key competencies in diverse contexts.

■ How is the learning area structured?

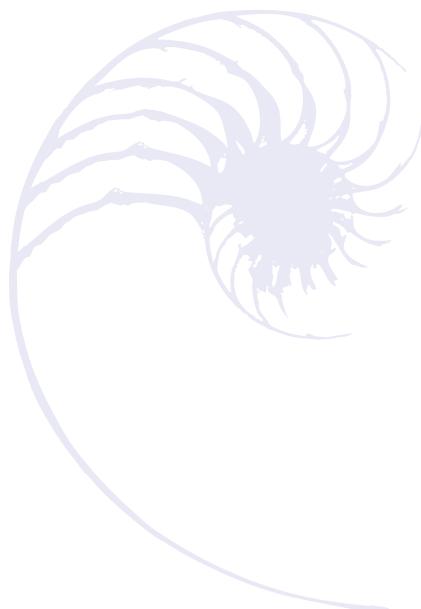

English is structured around two interconnected strands, each encompassing the oral, written, and visual forms of the language. The strands differentiate between the modes in which students are primarily:

- making meaning of ideas or information they receive (**Listening, Reading, and Viewing**);
- creating meaning for themselves or others (**Speaking, Writing, and Presenting**).

The achievement objectives within each strand suggest progressions through which most students move as they become more effective oral, written, and visual communicators. Using a set of underpinning processes and strategies, students develop knowledge, skills, and understandings related to:

- text purposes and audiences;
- ideas within language contexts;
- language features that enhance texts;
- the structure and organisation of texts.

Students need to practise *making meaning* and *creating meaning* at each level of the curriculum. This need is reflected in the way that the achievement objectives are structured. As they progress, students use their skills to engage with tasks and texts that are increasingly sophisticated and challenging, and they do this in increasing depth.

The Arts

*Te toi whakairo, ka ihiihi, ka wehiwehi,
ka aweawe te ao katoa.*

What are the arts about?

The arts are powerful forms of expression that recognise, value, and contribute to the unique bicultural and multicultural character of Aotearoa New Zealand, enriching the lives of all New Zealanders. The arts have their own distinct languages that use both verbal and non-verbal conventions, mediated by selected processes and technologies. Through movement, sound, and image, the arts transform people's creative ideas into expressive works that communicate layered meanings.

Why study the arts?

Arts education explores, challenges, affirms, and celebrates unique artistic expressions of self, community, and culture. It embraces *toi Māori*, valuing the forms and practices of customary and contemporary Māori performing, musical, and visual arts.

Learning in, through, and about the arts stimulates creative action and response by engaging and connecting thinking, imagination, senses, and feelings. By participating in the arts, students' personal well-being is enhanced. As students express and interpret ideas within creative, aesthetic, and technological frameworks, their confidence to take risks is increased. Specialist studies enable students to contribute their vision, abilities, and energies to arts initiatives and creative industries.

In the arts, students learn to work both independently and collaboratively to construct meanings, produce works, and respond to and value others' contributions. They learn to use imagination to engage with unexpected outcomes and to explore multiple solutions.

Arts education values young children's experiences and builds on these with increasing sophistication and complexity as their knowledge and skills develop. Through the use of creative and intuitive thought and action, learners in the arts are able to view their world from new perspectives. Through the development of arts literacies, students, as creators, presenters, viewers, and listeners, are able to participate in, interpret, value, and enjoy the arts throughout their lives.

How is the learning area structured?

The arts learning area comprises four disciplines: dance, drama, music – sound arts, and visual arts. Within each, students develop literacies as they build on skills, knowledge, attitudes, and understandings at each of the eight levels of the curriculum. Through arts practices and the use of traditional and new technologies, students' artistic ideas are generated and refined through cycles of action and reflection.

Each discipline is structured around four interrelated strands: **Understanding the Arts in Context**, **Developing Practical Knowledge** in the arts, **Developing Ideas** in the arts, and **Communicating and Interpreting** in the arts. The achievement objectives for each discipline reflect its distinct body of knowledge and practices. By building on and revisiting learning from previous levels, arts programmes in each discipline provide progressions of learning opportunities in all four strands. This spiral process ensures that students' learning is relevant, in-depth, and meaningful.

Over the course of years 1–8, students will learn in all four disciplines. Over the course of years 9–10, they will learn in at least two. Students in years 11–13 may specialise in one or more of the disciplines or undertake study in multimedia and other new technologies.

Dance

Dance is expressive movement that has intent, purpose, and form. In dance education, students integrate thinking, moving, and feeling. They explore and use dance elements, vocabularies, processes, and technologies to express personal, group, and cultural identities, to convey and interpret artistic ideas, and to strengthen social interaction. Students develop literacy in dance as they learn about, and develop skills in, performing, choreographing, and responding to a variety of genres from a range of historical and contemporary contexts.

Drama

Drama expresses human experience through a focus on role, action, and tension, played out in time and space. In drama education, students learn to structure these elements and to use dramatic conventions, techniques, and technologies to create imagined worlds. Through

purposeful play, both individual and collaborative, they discover how to link imagination, thoughts, and feelings.

As students work with drama techniques, they learn to use spoken and written language with increasing control and confidence and to communicate effectively using body language, movement, and space. As they perform, analyse, and respond to different forms of drama and theatre, they gain a deeper appreciation of their rich cultural heritage and language and new power to examine attitudes, behaviours, and values.

By means of the drama that they create and perform, students reflect and enrich the cultural life of their schools, whānau, and communities.

Music – Sound Arts

Sound from natural, acoustic, and digital environments is the source material for expressive ideas in music. These ideas are manipulated and extended into forms, genres, and styles that are recognised as music. Music is a fundamental form of expression, both personal and cultural. Value is placed upon the musical heritages of New Zealand's diverse cultures, including traditional and contemporary Māori musical arts. By making, sharing, and responding to music, students contribute to the cultural life of their schools, whānau, peer groups, and communities. As they engage with and develop knowledge and deeper understandings of music, they draw on cultural practices and on histories, theories, structures, technologies, and personal experiences.

In music education, students work individually and collaboratively to explore the potential of sounds and technologies for creating, interpreting, and representing music ideas. As they think about and explore innovative sound and media, students have rich opportunities to further their own creative potential.

Students develop literacies in music as they listen and respond, sing, play instruments, create and improvise, read symbols and notations, record sound and music works, and analyse and appreciate music. This enables them to develop aural and theoretical skills and to value and understand the expressive qualities of music.

As students learn to communicate musically with increasing sophistication, they lay a foundation for lifelong enjoyment of and participation in music. Some will go on to take courses in musicology, performance, or composition. These may be steps on the way to music-related employment.

Visual Arts

Through engaging in the visual arts, students learn how to discern, participate in, and celebrate their own and others' visual worlds. Visual arts learning begins with children's curiosity and delight in their senses and stories and extends to communication of complex ideas and concepts. An understanding of Māori visual culture is achieved through exploration of Māori contexts. The arts of European, Pasifika, Asian, and other cultures add significant dimensions to New Zealand visual culture.

In visual arts education, students develop visual literacy and aesthetic awareness as they manipulate and transform visual, tactile, and spatial ideas to solve problems. They explore experiences, stories, abstract concepts, social issues, and needs, both individually and collaboratively. They experiment with materials, using processes and conventions to develop their visual enquiries and create both static and time-based art works. They view art works, bringing their own experiences, sharing their responses, and generating multiple interpretations. Their meaning making is further informed by investigation of the contexts in which art works are created, used, and valued. As they develop their visual literacy, students are able to engage with a wider range of art experiences in increasingly complex and conscious ways.

The visual arts develop students' conceptual thinking within a range of practices across drawing, sculpture, design, painting, printmaking, photography, and moving image. Art history may include a study of theories of the arts, architecture, and design. Theoretical investigations also inform practical enquiry. Opportunities to explore and communicate in the visual arts continue to expand as technologies and multi-disciplinary practices evolve.

Health and Physical Education

He oranga ngākau, he pikinga waiora.

What is health and physical education about?

In health and physical education, the focus is on the well-being of the students themselves, of other people, and of society through learning in health-related and movement contexts.

Four underlying and interdependent concepts are at the heart of this learning area:

- **Hauora** – a Māori philosophy of well-being that includes the dimensions taha wairua, taha hinengaro, taha tinana, and taha whānau, each one influencing and supporting the others.
- **Attitudes and values** – a positive, responsible attitude on the part of students to their own well-being; respect, care, and concern for other people and the environment; and a sense of social justice.
- The **socio-ecological perspective** – a way of viewing and understanding the interrelationships that exist between the individual, others, and society.
- **Health promotion** – a process that helps to develop and maintain supportive physical and emotional environments and that involves students in personal and collective action.

Why study in this learning area?

Through learning and by accepting challenges in health-related and movement contexts, students reflect on the nature of well-being and how to promote it. As they develop resilience and a sense of personal and social responsibility, they are increasingly able to take responsibility for themselves and contribute to the well-being of those around them, of their communities, of their environments (including natural environments), and of the wider society.

This learning area makes a significant contribution to the well-being of students beyond the classroom, particularly when it is supported by school policies and procedures and by the actions of all people in the school community.

How is the learning area structured?

The learning activities in health and physical education arise from the integration of the four concepts above, the following four strands and their achievement objectives, and seven key areas of learning.

The four strands are:

- **Personal Health and Physical Development**, in which students develop the knowledge, understandings, skills, and attitudes that they need in order to maintain and enhance their personal well-being and physical development;
- **Movement Concepts and Motor Skills**, in which students develop motor skills, knowledge and understandings about movement, and positive attitudes towards physical activity;
- **Relationships with Other People**, in which students develop understandings, skills, and attitudes that enhance their interactions and relationships with others;
- **Healthy Communities and Environments**, in which students contribute to healthy communities and environments by taking responsible and critical action.

The seven key areas of learning are:

mental health, sexuality education, food and nutrition, body care and physical safety, physical activity, sport studies, and outdoor education.

All seven areas are to be included in teaching and learning programmes at both primary and secondary levels.

Note that:

- it is expected that schools will consult with their communities when developing health and sexuality education programmes;
- it is expected that all students will have had opportunities to learn basic aquatics skills by the end of year 6 and practical cooking skills by the end of year 8;
- outdoor education programmes must follow safe practice and meet legal requirements.

Health and physical education encompasses three different but related subjects: health education, physical education, and home economics. These subjects share a conceptual framework and achievement objectives.

Health education

In health education, students develop their understanding of the factors that influence the health of individuals, groups, and society: lifestyle, economic, social, cultural, political, and environmental factors. Students develop competencies for mental wellness, reproductive health and positive sexuality, and safety management, and they develop understandings of nutritional needs. Students build resilience through strengthening their personal identity and sense of self-worth, through managing change and loss, and through engaging in processes for responsible decision making. They learn to demonstrate empathy, and they develop skills that enhance relationships. Students use these skills and understandings to take critical action to promote personal, interpersonal, and societal well-being.

Physical education

In physical education, the focus is on movement and its contribution to the development of individuals and communities. By learning in, through, and about movement, students gain an understanding that movement is integral to human expression and that it can contribute to people's pleasure and enhance their lives. They learn to understand, appreciate, and move their bodies, relate positively to others, and demonstrate constructive attitudes and values. This learning takes place as they engage in play, games, sport, exercise, recreation, adventure, and expressive movement in diverse physical and social environments. Physical education encourages students to engage in movement experiences that promote and support the development of physical and social skills. It fosters critical thinking and action and enables students to understand the role and significance of physical activity for individuals and society.

Home economics

In home economics, students develop an understanding of the factors that influence the well-being of individuals and families within the home and community and of the actions people take to enhance and sustain those environments. In the context of food and nutrition, students evaluate current issues and theories of nutrition, identify and reflect on factors that influence people's choices and behaviours, and use this knowledge to make informed decisions. Through the processes of selecting, preparing, cooking, and serving food, students develop their creativity and experience a sense of accomplishment. At the same time, they develop personal and interpersonal understandings and skills that contribute to well-being.

Learning Languages

*Ko tōu reo, ko tōku reo,
te tuakiri tangata.
Thei uriuri, thei nakonako.*

What is learning languages about?

Learning a new language provides a means of communicating with people from another culture and exploring one's own personal world.

Languages are inseparably linked to the social and cultural contexts in which they are used. Languages and cultures play a key role in developing our personal, group, national, and human identities. Every language has its own ways of expressing meanings; each has intrinsic value and special significance for its users.

This learning area provides the framework for the teaching and learning of languages that are additional to the language of instruction. Level 1 of the curriculum is the entry level for students with no prior knowledge of the language being learned, regardless of their school year.

Why study a language?

Languages link people locally and globally. They are spoken in the community, used internationally, and play a role in shaping the world. Oral, written, and visual forms of language link us to the past and give us access to new and different streams of thought and to beliefs and cultural practices.

Te reo Māori and New Zealand Sign Language (NZSL) are official languages of New Zealand. Because of New Zealand's close relationships with the peoples of the Pacific, Pasifika languages also have a special place.

By learning an additional language and its related culture(s), students come to appreciate that languages and cultures are systems that are organised and used in particular ways to achieve meaning. Learning a new language extends students' linguistic and cultural understanding and their ability to interact appropriately with other speakers. Interaction in a new language, whether face to face or technologically facilitated, introduces them to new ways of thinking about, questioning, and interpreting the world and their place in it. Through such interaction, students acquire knowledge, skills, and attitudes that equip them for living in a world of diverse peoples, languages, and cultures. As they move between, and respond to, different languages and different cultural practices,

they are challenged to consider their own identities and assumptions.

As they learn a language, students develop their understanding of the power of language. They discover new ways of learning, new ways of knowing, and more about their own capabilities. Learning a language provides students with the cognitive tools and strategies to learn further languages and to increase their understanding of their own language(s) and culture(s).

How is the learning area structured?

This learning area puts students' ability to communicate at the centre by making Communication the core strand. This strand is supported by two further strands, which are directed specifically at developing the linguistic and cultural awareness needed for communicative competence.

In the core **Communication** strand, students learn to use the language to make meaning. As their linguistic and cultural knowledge increases, they become more effective communicators, developing the receptive skills of listening, reading, and viewing and the productive skills of speaking, writing, and presenting or performing.

In the supporting **Language Knowledge** strand, students study the language in order to understand how it works. They learn about the relationships between different words and different structures, how speakers adjust their language when negotiating meaning in different contexts and for different purposes, and how different types of text are organised. This strand helps students to develop explicit knowledge of the language, which will, over time, contribute to greater accuracy of use.

In the supporting **Cultural Knowledge** strand, students learn about culture and the interrelationship between culture and language. They grow in confidence as they learn to recognise different elements of the belief systems of speakers of the target language. They become increasingly aware of the ways in which these systems are expressed through language and cultural practices. As they compare and contrast different beliefs and cultural practices, including their own, they understand more about themselves and become more understanding of others.

The content of the learning area is specified in terms of a general proficiency statement for each progressive pair of levels, together with achievement objectives for

the core strand and the two supporting strands. The achievement objectives in the Communication strand provide the basis for assessment. The two supporting strands are only assessed indirectly through their contribution to the Communication strand.

The achievement objectives are generic in order to encompass all languages that may be offered for learning in schools. Language-specific guidelines provide further information.

Mathematics and Statistics

*Kei hopu tōu ringa ki te aka tāepa,
engari kia mau ki te aka matua.*

What is mathematics and statistics about?

Mathematics is the exploration and use of patterns and relationships in quantities, space, and time. Statistics is the exploration and use of patterns and relationships in data. These two disciplines are related but different ways of thinking and of solving problems. Both equip students with effective means for investigating, interpreting, explaining, and making sense of the world in which they live.

Mathematicians and statisticians use symbols, graphs, and diagrams to help them find and communicate patterns and relationships, and they create models to represent both real-life and hypothetical situations. These situations are drawn from a wide range of social, cultural, scientific, technological, health, environmental, and economic contexts.

Why study mathematics and statistics?

By studying mathematics and statistics, students develop the ability to think creatively, critically, strategically, and logically. They learn to structure and to organise, to carry out procedures flexibly and accurately, to process and communicate information, and to enjoy intellectual challenge.

By learning mathematics and statistics, students develop other important thinking skills. They learn to create models and predict outcomes, to conjecture, to justify and verify, and to seek patterns and generalisations. They learn to estimate with reasonableness, calculate with precision, and understand when results are precise and when they must be interpreted with uncertainty. Mathematics and statistics have a broad range of practical applications in everyday life, in other learning areas, and in workplaces.

How is the learning area structured?

The achievement objectives are presented in three strands. It is important that students can see and make sense of the many connections within and across these strands.

Number and Algebra. Number involves calculating and estimating, using appropriate mental, written, or machine calculation methods in flexible ways. It also involves knowing when it is appropriate to use estimation and being able to discern whether results are reasonable. Algebra involves generalising and representing the patterns and relationships found in numbers, shapes, and measures.

Geometry and Measurement. Geometry involves recognising and using the properties and symmetries of shapes and describing position and movement. Measurement involves quantifying the attributes of objects, using appropriate units and instruments. It also involves predicting and calculating rates of change.

Statistics involves identifying problems that can be explored by the use of appropriate data, designing investigations, collecting data, exploring and using patterns and relationships in data, solving problems, and communicating findings. Statistics also involves interpreting statistical information, evaluating data-based arguments, and dealing with uncertainty and variation.

Mā te whakaaro nui e hanga te whare; mā te mātauranga e whakaū.

What is science about?

Science is a way of investigating, understanding, and explaining our natural, physical world and the wider universe. It involves generating and testing ideas, gathering evidence – including by making observations, carrying out investigations and modelling, and communicating and debating with others – in order to develop scientific knowledge, understanding, and explanations. Scientific progress comes from logical, systematic work and from creative insight, built on a foundation of respect for evidence. Different cultures and periods of history have contributed to the development of science.

Why study science?

Science is able to inform problem solving and decision making in many areas of life. Many of the major challenges and opportunities that confront our world need to be approached from a scientific perspective, taking into account social and ethical considerations.

By studying science, students:

- develop an understanding of the world, built on current scientific theories;
- learn that science involves particular processes and ways of developing and organising knowledge and that these continue to evolve;
- use their current scientific knowledge and skills for problem solving and developing further knowledge;
- use scientific knowledge and skills to make informed decisions about the communication, application, and implications of science as these relate to their own lives and cultures and to the sustainability of the environment.

How is the learning area structured?

The fundamental aims of science education are expressed as a series of achievement aims, grouped by strand. (For these, see the chart of achievement objectives for science, available separately.) The achievement objectives at each level are derived from the aims and are similarly grouped by strand.

The **Nature of Science** strand is the overarching, unifying strand. Through it, students learn what science is and how scientists work. They develop the skills, attitudes, and values to build a foundation for understanding the world. They come to appreciate that while scientific knowledge is durable, it is also constantly re-evaluated in the light of new evidence. They learn how scientists carry out investigations, and they come to see science as a socially valuable knowledge system. They learn how science ideas are communicated and to make links between scientific knowledge and everyday decisions and actions. These outcomes are pursued through the following major contexts in which scientific knowledge has developed and continues to develop.

The **Living World** strand is about living things and how they interact with each other and the environment. Students develop an understanding of the diversity of life and life processes, of where and how life has evolved, of evolution as the link between life processes and ecology, and of the impact of humans on all forms of life. As a result, they are able to make more informed decisions about significant biological issues. The emphasis is on the biology of New Zealand, including the sustainability of New Zealand's unique fauna and flora and distinctive ecosystems.

The **Planet Earth and Beyond** strand is about the interconnecting systems and processes of the Earth, the other parts of the solar system, and the universe beyond. Students learn that Earth's subsystems of geosphere (land), hydrosphere (water), atmosphere (air), and biosphere (life) are interdependent and that all are important. They come to appreciate that humans can affect this interdependence in both positive and negative ways.

Students also learn that Earth provides all the resources required to sustain life except energy from the Sun, and that, as humans, we act as guardians of these finite resources. This means knowing and understanding the numerous interactions of Earth's four systems with the solar system. Students can then confront the issues facing our planet and make informed decisions about the protection and wise use of Earth's resources.

The **Physical World** strand provides explanations for a wide range of physical phenomena, including light, sound, heat, electricity, magnetism, waves, forces, and motion, united by the concept of energy, which is transformed from one form to another without loss. By studying physics, students gain an understanding of interactions between parts of the physical world and of

the ways in which they can be represented. Knowing about physics enables people to understand a wide range of contemporary issues and challenges and potential technological solutions.

The **Material World** strand involves the study of matter and the changes it undergoes. In their study of chemistry, students develop understandings of the composition and properties of matter, the changes it undergoes, and the energy involved. They use their understanding of the fundamental properties of chemistry to make sense of the world around them. They learn to interpret their observations by considering the properties and behaviour of atoms, molecules, and ions. They learn to communicate their understandings, using the symbols and conventions of chemistry. Using their knowledge of chemistry, they are better able to understand science-related challenges, such as

environmental sustainability and the development of new materials, pharmaceuticals, and sources of energy.

The core strand, **Nature of Science**, is required learning for all students up to year 10. The other strands provide contexts for learning. Over the course of years 1–10, science programmes should include learning in all four context strands.

Students in years 11–13 are able to specialise in one or more science disciplines, depending on the choices offered in their schools. The achievement objectives in the context strands provide for strand-based specialisations, but a wider range of programmes is possible; for example, schools may offer programmes in biochemistry, education for sustainability, agriculture, horticulture, human biology, or electronics.

Social Sciences

*Unuhia te rito o te harakeke kei whea te kōmako e kō?
Whakatairangitia – rere ki uta, rere ki tai;
Ui mai koe ki ahau he aha te mea nui o te ao,
Māku e kī atu he tangata, he tangata, he tangata!*

What are the social sciences about?

The social sciences learning area is about how societies work and how people can participate as critical, active, informed, and responsible citizens. Contexts are drawn from the past, present, and future and from places within and beyond New Zealand.

Why study the social sciences?

Through the social sciences, students develop the knowledge and skills to enable them to: better understand, participate in, and contribute to the local, national, and global communities in which they live and work; engage critically with societal issues; and evaluate the sustainability of alternative social, economic, political, and environmental practices.

Students explore the unique bicultural nature of New Zealand society that derives from the Treaty of Waitangi. They learn about people, places, cultures, histories, and the economic world, within and beyond New Zealand. They develop understandings about how societies are organised and function and how the ways in which people and communities respond are shaped by different perspectives, values, and viewpoints. As they explore how others see themselves, students clarify their own identities in relation to their particular heritages and contexts.

How is the learning area structured?

Achievement objectives for social studies at levels 1–5 integrate concepts from one or more of four conceptual strands:

Identity, Culture, and Organisation – Students learn about society and communities and how they function. They also learn about the diverse cultures and identities of people within those communities and about the effects of these on the participation of groups and individuals.

Place and Environment – Students learn about how people perceive, represent, interpret, and interact with places and environments. They come to understand the relationships that exist between people and the environment.

Continuity and Change – Students learn about past events, experiences, and actions and the changing ways in which these have been interpreted over time. This helps them to understand the past and the present and to imagine possible futures.

The Economic World – Students learn about the ways in which people participate in economic activities and about the consumption, production, and distribution of goods and services. They develop an understanding of their role in the economy and of how economic decisions affect individuals and communities.

Understandings in relation to the achievement objectives can be developed through a range of approaches. Using a social inquiry approach, students:

- ask questions, gather information and background ideas, and examine relevant current issues;
- explore and analyse people's values and perspectives;
- consider the ways in which people make decisions and participate in social action;
- reflect on and evaluate the understandings they have developed and the responses that may be required.

Inquiry in the social sciences is also informed by approaches originating from such contributing disciplines as history, geography, and economics.

Learning based on the level 1–5 social studies achievement objectives establishes a foundation for the separate social science disciplines offered in the senior secondary school. At levels 6–8, students are able to specialise in one or more of these, depending on the choices offered by their schools. Achievement objectives are provided for social studies, economics, geography, and history, but the range of possible social science disciplines that schools can offer is much broader, including, for example, classical studies, media studies, sociology, psychology, and legal studies.

Technology

*Kaua e rangiruatia te hāpai o te hoe;
e kore tō tātou waka e ū ki uta.*

What is technology about?

Technology is intervention by design: the use of practical and intellectual resources to develop products and systems (technological outcomes) that expand human possibilities by addressing needs and realising opportunities. Adaptation and innovation are at the heart of technological practice. Quality outcomes result from thinking and practices that are informed, critical, and creative.

Technology makes enterprise use of its own particular knowledge and skills, together with those of other disciplines. Graphics and other forms of visual representation offer important tools for exploration and communication.

Technology is never static. It is influenced by and in turn impacts on the cultural, ethical, environmental, political, and economic conditions of the day.

Why study technology?

The aim is for students to develop a broad technological literacy that will equip them to participate in society as informed citizens and give them access to technology-related careers. They learn practical skills as they develop models, products, and systems. They also learn about technology as a field of human activity, experiencing and/or exploring historical and contemporary examples of technology from a variety of contexts.

Technology is associated with the transformation of energy, information, and materials. Technological areas include structural, control, food, and information and communications technology and biotechnology. Relevant contexts can be as varied as computer game software, food products, worm farming, security systems, costumes and stage props, signage, and taonga.

How is the learning area structured?

The learning area comprises three strands: Technological Practice, Technological Knowledge, and Nature of Technology. Teaching and learning programmes will integrate all three, though a particular unit of work may focus on just one or two.

Knowledge and skills are learned in context. By offering a variety of contexts, teachers help their students to recognise links and develop generic understandings. Students should be encouraged to access relevant knowledge and skills from other learning areas.

In the **Technological Practice** strand, students examine the practice of others and undertake their own. They develop a range of outcomes, including concepts, plans, briefs, technological models, and fully realised products or systems. Students investigate issues and existing outcomes and use the understandings gained, together with design principles and approaches, to inform their own practice. They also learn to consider ethics, legal requirements, protocols, codes of practice, and the needs of and potential impacts on stakeholders and the environment.

Through the **Technological Knowledge** strand, students develop knowledge particular to technological enterprises and environments and understandings of how and why things work. Students learn how functional modelling is used to evaluate design ideas and how prototyping is used to evaluate the fitness for purpose of systems and products as they are developed. An understanding of material properties, uses, and development is essential to understanding how and why products work the way they do. Similarly, an understanding of the constituent parts of systems and how these work together is essential to understanding how and why systems operate in the way they do.

Through the **Nature of Technology** strand, students develop an understanding of technology as a discipline and of how it differs from other disciplines. They learn to critique the impact of technology on societies and the environment and to explore how developments and outcomes are valued by different peoples in different times. As they do so, they come to appreciate the socially embedded nature of technology and become increasingly able to engage with current and historical issues and to explore future scenarios.

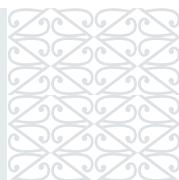

In years 11–13, students work with fewer contexts in greater depth. This requires them to continue to draw fully on learning from other disciplines. For example, students working with materials and/or food technology will need to refer to chemistry, and students working on an architectural project will find that an understanding of art history is invaluable. Some schools may offer courses such as electronics and horticulture as technology specialisations.

Learning for senior students opens up pathways that can lead to technology-related careers. Students may access the workplace learning opportunities available in a range of industries or move on to further specialised tertiary study.

Effective Pedagogy

Teacher actions promoting student learning

While there is no formula that will guarantee learning for every student in every context, there is extensive, well-documented evidence about the kinds of teaching approaches that consistently have a positive impact on student learning. This evidence tells us that students learn best when teachers:

- create a supportive learning environment;
- encourage reflective thought and action;
- enhance the relevance of new learning;
- facilitate shared learning;
- make connections to prior learning and experience;
- provide sufficient opportunities to learn;
- inquire into the teaching–learning relationship.

Creating a supportive learning environment

Learning is inseparable from its social and cultural context. Students learn best when they feel accepted, when they enjoy positive relationships with their fellow students and teachers, and when they are able to be active, visible members of the learning community. Effective teachers foster positive relationships within environments that are caring, inclusive, non-discriminatory, and cohesive. They also build good relationships with the wider school community, working with parents and caregivers as key partners who have unique knowledge of their children and countless opportunities to advance their children’s learning. Effective teachers attend to the cultural and linguistic diversity of all their students. The classroom culture exists within and alongside many other cultures, including the cultures of the wider school and the local community, the students’ peer culture, and the teacher’s professional culture.

Encouraging reflective thought and action

Students learn most effectively when they develop the ability to stand back from the information or ideas that they have engaged with and think about these objectively. Reflective learners assimilate new learning, relate it to what they already know, adapt it for their own purposes, and translate thought into action. Over time, they develop their creativity, their ability to think critically about information and ideas, and their metacognitive ability (that is, their ability to think about their own thinking). Teachers encourage such thinking when they design tasks and opportunities that require students to critically evaluate the material they use and consider the purposes for which it was originally created.

Enhancing the relevance of new learning

Students learn most effectively when they understand what they are learning, why they are learning it, and how they will be able to use their new learning. Effective teachers stimulate the curiosity of their students, require them to search for relevant information and ideas, and challenge them to use or apply what they discover in new contexts or in new ways. They look for opportunities to involve students directly in decisions relating to their own learning. This encourages them to see what they are doing as relevant and to take greater ownership of their own learning.

Facilitating shared learning

Students learn as they engage in shared activities and conversations with other people, including family members and people in the wider community. Teachers encourage this process by cultivating the class as a learning community. In such a community, everyone, including the teacher, is a learner; learning conversations and learning partnerships are encouraged; and challenge, support, and feedback are always available. As they engage in reflective discourse with others, students build the language that they need to take their learning further.

Making connections to prior learning and experience

Students learn best when they are able to integrate new learning with what they already understand. When teachers deliberately build on what their students know and have experienced, they maximise the use of learning time, anticipate students’ learning needs, and avoid unnecessary duplication of content. Teachers can help students to make connections across learning areas as well as to home practices and the wider world.

Providing sufficient opportunities to learn

Students learn most effectively when they have time and opportunity to engage with, practise, and transfer new learning. This means that they need to encounter new learning a number of times and in a variety of different tasks or contexts. It also means that when curriculum coverage and student understanding are in competition, the teacher may decide to cover less but cover it in greater depth. Appropriate assessment helps the teacher to determine what “sufficient” opportunities

mean for an individual student and to sequence students' learning experiences over time.

Teaching as inquiry

Since any teaching strategy works differently in different contexts for different students, effective pedagogy requires that teachers inquire into the impact of their teaching on their students.

Inquiry into the teaching–learning relationship can be visualised as a cyclical process that goes on moment by moment (as teaching takes place), day by day, and over the longer term. In this process, the teacher asks:

- What is important (and therefore worth spending time on), given where my students are at?

This *focusing inquiry* establishes a baseline and a direction. The teacher uses all available information to determine what their students have already learned and what they need to learn next.

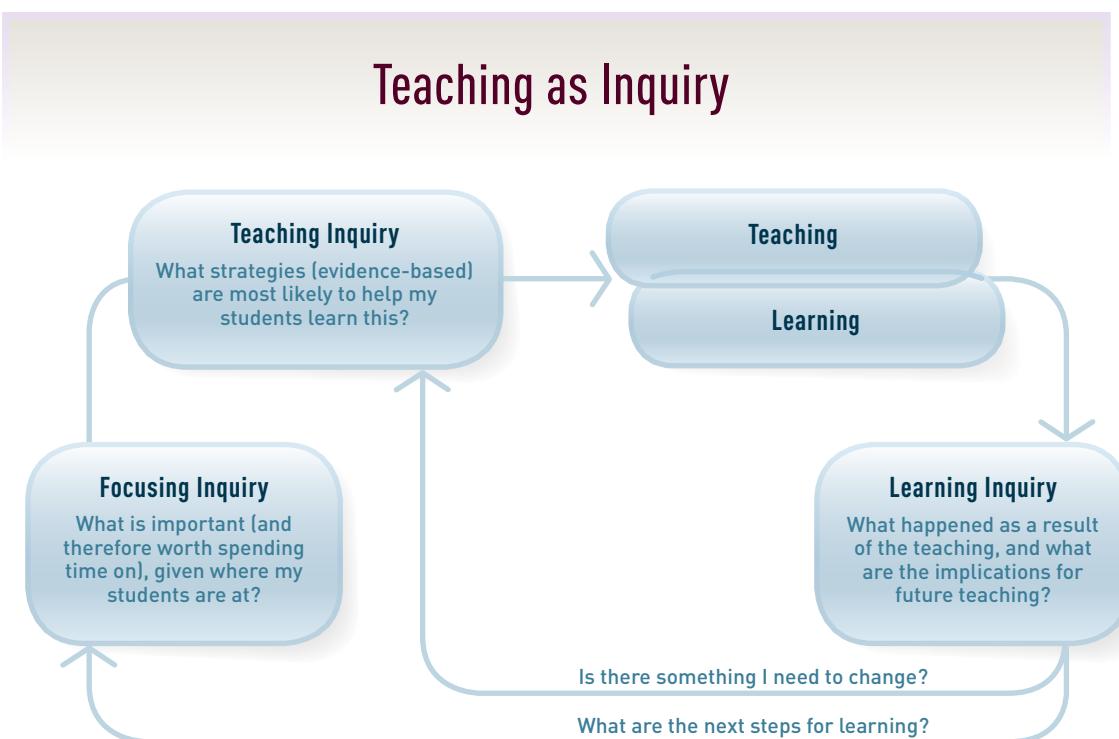

- What strategies (evidence-based) are most likely to help my students learn this?

In this *teaching inquiry*, the teacher uses evidence from research and from their own past practice and that of colleagues to plan teaching and learning opportunities aimed at achieving the outcomes prioritised in the focusing inquiry.

- What happened as a result of the teaching, and what are the implications for future teaching?

In this *learning inquiry*, the teacher investigates the success of the teaching in terms of the prioritised outcomes, using a range of assessment approaches. They do this both while learning activities are in progress and also as longer-term sequences or units of work come to an end. They then analyse and interpret the information to consider what they should do next.

See pages 39–40 for a discussion of purposeful assessment.

E-learning and pedagogy

Information and communication technology (ICT) has a major impact on the world in which young people live. Similarly, e-learning (that is, learning supported by or facilitated by ICT) has considerable potential to support the teaching approaches outlined in the above section.

For instance, e-learning may:

- assist the making of *connections* by enabling students to enter and explore new learning environments, overcoming barriers of distance and time;

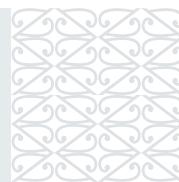

- facilitate *shared learning* by enabling students to join or create communities of learners that extend well beyond the classroom;
- assist in the creation of *supportive learning environments* by offering resources that take account of individual, cultural, or developmental differences;
- enhance *opportunities to learn* by offering students virtual experiences and tools that save them time, allowing them to take their learning further.

Schools should explore not only how ICT can supplement traditional ways of teaching but also how it can open up new and different ways of learning.

The School Curriculum: Design and Review

From New Zealand Curriculum to school curriculum

Curriculum design and review is a continuous, cyclic process. It involves making decisions about how to give effect to the national curriculum in ways that best address the particular needs, interests, and circumstances of the school's students and community. It requires a clear understanding of the intentions of the New Zealand Curriculum and of the values and expectations of the community. Above all, it clarifies priorities for student learning, the ways in which those priorities will be addressed, and how student progress and the quality of teaching and learning will be assessed. Curriculum change should build on existing good practice and aim to maximise the use of local resources and opportunities.

Curriculum is designed and interpreted in a three-stage process: as the national curriculum, the school curriculum, and the classroom curriculum. The national curriculum provides the framework and common direction for schools, regardless of type, size, or location. It gives schools the scope, flexibility, and authority they need to design and shape their curriculum so that teaching and learning is meaningful and beneficial to their particular communities of students. In turn, the design of each school's curriculum should allow teachers the scope to make interpretations in response to the particular needs, interests, and talents of individuals and groups of students in their classes.

All New Zealand students, regardless of where they are situated, should experience a rich and balanced education that embraces the intent of the national curriculum. The *principles* should underpin and guide the design, practice, and evaluation of curriculum at every stage. The *values*, *key competencies*, and *learning areas* provide the basis for teaching and learning across schools and within schools. This learning will contribute to the realisation of a vision of young people who will be confident, connected, actively involved, lifelong learners.

Key considerations

- The relationship between the New Zealand Curriculum and the school curriculum
- Principles
- Values, key competencies, and learning areas
- Achievement objectives
- Assessment
- Learning pathways

The relationship between the New Zealand Curriculum and the school curriculum

The New Zealand Curriculum sets the direction for teaching and learning in English-medium New Zealand schools. But it is a framework rather than a detailed plan. This means that while every school curriculum must be clearly aligned with the intent of this document, schools have considerable flexibility when determining the detail. In doing this, they can draw on a wide range of ideas, resources, and models.

Schools are required to base their curriculum on the principles of the New Zealand Curriculum, to encourage and model the values, and to develop the key competencies at all year levels.

In years 1–10, schools are required to provide teaching and learning in English, the arts, health and physical education, mathematics and statistics, science, the social sciences, and technology.

Principles

The principles are foundations of curriculum decision-making. They embody beliefs about the nature of the educational experience and the entitlement of students; they apply equally to all schools and to every aspect of the curriculum. Schools should be able to clearly demonstrate their commitment to the principles and to articulate how they are given effect in teaching and learning.

Values, key competencies, and learning areas

The New Zealand Curriculum identifies *values* to be encouraged and modelled and to be explored by students, *key competencies* that students will develop over time and in a range of settings, and *learning areas* that describe what they will come to know and do.

Schools need to consider how each of these aspects of the curriculum will be promoted and developed in teaching and learning. They can do this in different ways.

Schools may, for example, decide to organise their curriculum around one of these three aspects (values, key competencies, or learning areas) and deliberately weave the other two through their programmes. Alternatively, they may decide to organise their

curriculum around central themes, integrating values, key competencies, knowledge, and skills across a number of learning areas. Or they may use another approach or a combination of approaches.

The values, competencies, knowledge, and skills that students will need for addressing real-life situations are rarely confined to one part of the curriculum. Wherever possible, schools should aim to design their curriculum so that learning crosses apparent boundaries.

Values

Every school has a set of values. They are expressed in its philosophy, in the way it is organised, and in interpersonal relationships at every level. Following discussions with their communities, many schools list their values in their charters.

The New Zealand Curriculum identifies a number of values that have widespread community support. These values are to be encouraged and modelled, and they are to be explored by students. Schools need to consider how they can make the values an integral part of their curriculum and how they will monitor the effectiveness of the approach taken.

Key competencies

The key competencies are both end and means. They are a focus for learning – and they enable learning. They are the capabilities that young people need for growing, working, and participating in their communities and society.

The school curriculum should challenge students to use and develop the competencies across the range of learning areas and in increasingly complex and unfamiliar situations. Opportunities for doing this can often be integrated into existing programmes of work. Use can also be made of opportunities provided by the ways in which school environments and events are structured. There will be times when students can initiate activities themselves. Such activities provide meaningful contexts for learning and self-assessment.

In practice, the key competencies are most often used in combination. When researching an issue of interest, for example, students are likely to need to:

- set and monitor personal goals, manage time frames, arrange activities, and reflect on and respond to ideas they encounter (*managing self*);

- interact, share ideas, and negotiate with a range of people (*relating to others*);
- call on a range of communities for information and use that information as a basis for action (*participating and contributing*);
- analyse and consider a variety of possible approaches to the issue at hand (*thinking*);
- create texts to record and communicate ideas, using language and symbols appropriate to the relevant learning area(s) (*using language, symbols, and texts*).

When designing and reviewing their curriculum, schools will need to consider how to encourage and monitor the development of the key competencies. They will need to clarify their meaning for their students. They will also need to clarify the conditions that will help or hinder the development of the competencies, the extent to which they are being demonstrated, and how the school will evaluate the effectiveness of approaches intended to strengthen them.

With appropriate teacher guidance and feedback, all students should develop strategies for self-monitoring and collaborative evaluation of their performance in relation to suitable criteria. Self-assessments might involve students examining and discussing various kinds of evidence, making judgments about their progress, and setting further goals.

Learning areas

The learning area statements (pages 18–33) describe the essential nature of each learning area, how it can contribute to a young person’s education, and how it is structured. These statements, rather than the achievement objectives, should be the starting point for developing programmes of learning suited to students’ needs and interests. Schools are then able to select achievement objectives to fit those programmes.

None of the strands in the required learning areas is optional, but in some learning areas, particular strands may be emphasised at different times or in different years. Schools should have a clear rationale for doing this and should ensure that each strand receives due emphasis over the longer term.

Links between learning areas should be explored. This can lead, for example, to units of work or broad programmes designed to:

- develop students' knowledge and understandings in relation to major social, political, and economic shifts of the day, for example, through studies of Asia and the Pacific Rim;
- develop students' financial capability, positioning them to make well-informed financial decisions throughout their lives.

Future focus

Future-focused issues are a rich source of learning opportunities. They encourage the making of connections across the learning areas, values, and key competencies, and they are relevant to students' futures. Such issues include:

- **sustainability** – exploring the long-term impact of social, cultural, scientific, technological, economic, or political practices on society and the environment;
- **citizenship** – exploring what it means to be a citizen and to contribute to the development and well-being of society;
- **enterprise** – exploring what it is to be innovative and entrepreneurial;
- **globalisation** – exploring what it means to be part of a global community and to live amongst diverse cultures.

Achievement objectives

The achievement objectives found in the New Zealand Curriculum set out selected learning processes, knowledge, and skills relative to eight levels of learning. These desirable levels of knowledge, understanding, and skills represent progress towards broader outcomes that ultimately amount to deeper learning. When designing and reviewing their curriculum, schools choose achievement objectives from each area to fit the learning needs of their students.

Some achievement objectives relate to skills or understandings that can be mastered within a particular learning level. Others are more complex and are developed with increasing sophistication across a number of learning levels. The broader and more complex an objective, the more significant it is likely to be for a student's learning.

It is important for both planning and teaching purposes that schools provide clear statements of learning expectations that apply to particular levels or across a number of levels. These expectations should be stated in ways that help teachers, students, and parents to recognise, measure, discuss, and chart progress.

A school's curriculum is likely to be well designed when:

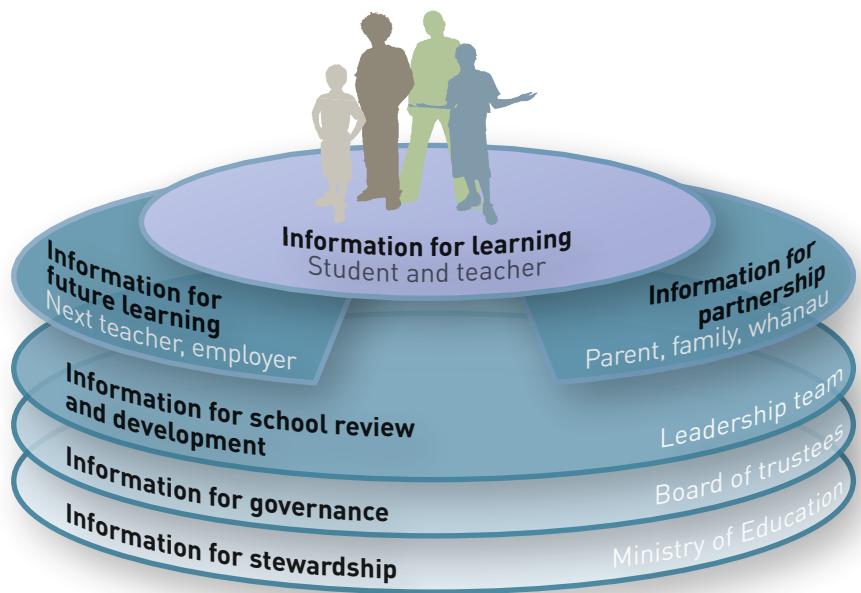

- Principals and teachers can show what it is that they want their students to learn and how their curriculum is designed to achieve this.
- Students are helped to build on existing learning and take it to higher levels. Students with special needs are given quality learning experiences that enable them to achieve, and students with special abilities and talents are given opportunities to work beyond formally described objectives.
- The long view is taken: each student's ultimate learning success is more important than the covering of particular achievement objectives.

Curriculum design and practice should begin with the premise that all students can learn and succeed (see the *high expectations* principle) and should recognise that, as all students are individuals, their learning may call for different approaches, different resourcing, and different goals (see the *inclusion* principle).

Assessment

The primary purpose of assessment is to improve students' learning and teachers' teaching as both student and teacher respond to the information that it provides. With this in mind, schools need to consider how they will gather, analyse, and use assessment information so that it is effective in meeting this purpose.

Assessment for the purpose of improving student learning is best understood as an ongoing process that arises out of the interaction between teaching and learning. It involves the focused and timely gathering, analysis, interpretation, and use of information that can provide evidence of student progress. Much of this evidence is "of the moment". Analysis and interpretation often take place in the mind of the teacher, who then uses the insights gained to shape their actions as they continue to work with their students.

Uses of assessment information

The adjacent diagram shows the different groups of people involved in supporting students' learning and the purposes for which they need assessment information.

Some characteristics of effective assessment

Effective assessment:

- **benefits students** – It clarifies for them what they know and can do and what they still need to learn. When students see that they are making progress, their motivation is sustained and their confidence increases.
- **involves students** – They discuss, clarify, and reflect on their goals, strategies, and progress with their teachers, their parents, and one another. This develops students' capacity for self- and peer assessment, which lead in turn to increased self-direction.
- **supports teaching and learning goals** – Students understand the desired outcomes and the criteria for success. Important outcomes are emphasised, and the teacher gives feedback that helps the students to reach them.
- **is planned and communicated** – Outcomes, teaching strategies, and assessment criteria are carefully matched. Students know in advance how and why they are to be assessed. The teacher's programme planning is flexible so that they can make changes in response to new information, opportunities, or insights.
- **is suited to the purpose** – Evidence is obtained through a range of informal and formal assessment approaches. These approaches are chosen to suit the nature of the learning being assessed, the varied characteristics and experiences of the students, and the purpose for which the information is to be used.

- **is valid and fair** – Teachers obtain and interpret information from a range of sources and then base decisions on this evidence, using their professional judgment. Conclusions are most likely to be valid when the evidence for them comes from more than one assessment.

Assessment is integral to the teaching inquiry process (see page 35) because it is the basis for both the focusing inquiry and the learning inquiry.

School-wide assessment

Schools need to know what impact their programmes are having on student learning. An important way of getting this information is by collecting and analysing school-wide assessment data. Schools can then use this information as the basis for changes to policies or programmes or changes to teaching practices as well as for reporting to the board of trustees, parents, and the Ministry of Education. Assessment information may also be used to compare the relative achievement of different groups of students or to compare the achievement of the school's students against national standards.

Assessment for national qualifications

The *New Zealand Curriculum* provides the basis for the ongoing development of achievement standards and unit standards registered on the National Qualifications Framework, which are designed to lead to the award of qualifications in years 11–13. These include the National Certificate of Educational Achievement and other national certificates that schools may choose to offer.

The New Zealand Curriculum, together with the Qualifications Framework, gives schools the flexibility to design and deliver programmes that will engage all students and offer them appropriate learning pathways. The flexibility of the qualifications system also allows schools to keep assessment to levels that are manageable and reasonable for both students and teachers. Not all aspects of the curriculum need to be formally assessed, and excessive high-stakes assessment in years 11–13 is to be avoided.

Learning pathways

As students journey from early childhood through secondary school and, in many cases, on to tertiary training or tertiary education in one of its various forms, they should find that each stage of the journey prepares them for and connects well with the next. Schools can design their curriculum so that students find the transitions positive and have a clear sense of continuity and direction.

Early childhood learning

Te Whāriki: He Whāriki Mātauranga mō ngā Mokopuna o Aotearoa, the curriculum for early childhood education, provides children with a foundation for ongoing learning. It is based on four principles: Empowerment, Holistic Development, Family and Community, and Relationships.

Te Whāriki includes five curriculum strands: Exploration – Mana Aotūroa, Communication – Mana Reo, Well-being – Mana Atua, Contribution – Mana Tangata, and Belonging – Mana Whenua. Together, they provide a foundation for lifelong learning. These strands correspond to the key competencies identified in this document.

Learning in years 1–6

The transition from early childhood education to school is supported when the school:

- fosters a child's relationships with teachers and other children and affirms their identity;
- builds on the learning experiences that the child brings with them;
- considers the child's whole experience of school;
- is welcoming of family and whānau.

This new stage in children's learning builds upon and makes connections with early childhood learning and experiences. Teaching and learning programmes are developed through a wide range of experiences across all learning areas, with a focus on literacy and numeracy along with the development of values and key competencies.

Learning in years 7–10

During these years, students have opportunities to achieve to the best of their abilities across the breadth and depth of the *New Zealand Curriculum* – values, key competencies, and learning areas – laying a foundation for living and for further learning.

A responsive curriculum will recognise that students in these years are undergoing rapid physical development, becoming increasingly socially aware, and encountering increasingly complex curriculum contexts. Particularly important are positive relationships with adults, opportunities for students to be involved in the community, and authentic learning experiences.

Students' learning progress is closely linked to their ongoing development of literacy and numeracy skills. These continue to require focused teaching.

Learning in years 11–13

The *New Zealand Curriculum* allows for greater choice and specialisation as students approach the end of their school years and as their ideas about future direction become clearer. Schools recognise and provide for the diverse abilities and aspirations of their senior students in ways that enable them to appreciate and keep open a range of options for future study and work. Students can specialise within learning areas or take courses across or outside learning areas, depending on the choices that their schools are able to offer.

In these years, students gain credits towards a range of recognised qualifications. Schools can extend this range by making it possible for students to participate in programmes or studies offered by workplaces and tertiary institutions. Credits gained in this way can often be later transferred to tertiary qualifications.

The values and key competencies gain increasing significance for senior school students as they appreciate that these are the values and capabilities they will need as adults for successful living and working and for continued learning.

Tertiary education and employment

Tertiary education in its various forms offers students wide-ranging opportunities to pursue an area or areas of particular interest. Some tertiary education focuses on the highly specific skills and discipline knowledge required, for example, by trades, ICT, and health professions. In other cases, the emphasis is on more broadly applicable skills and theoretical

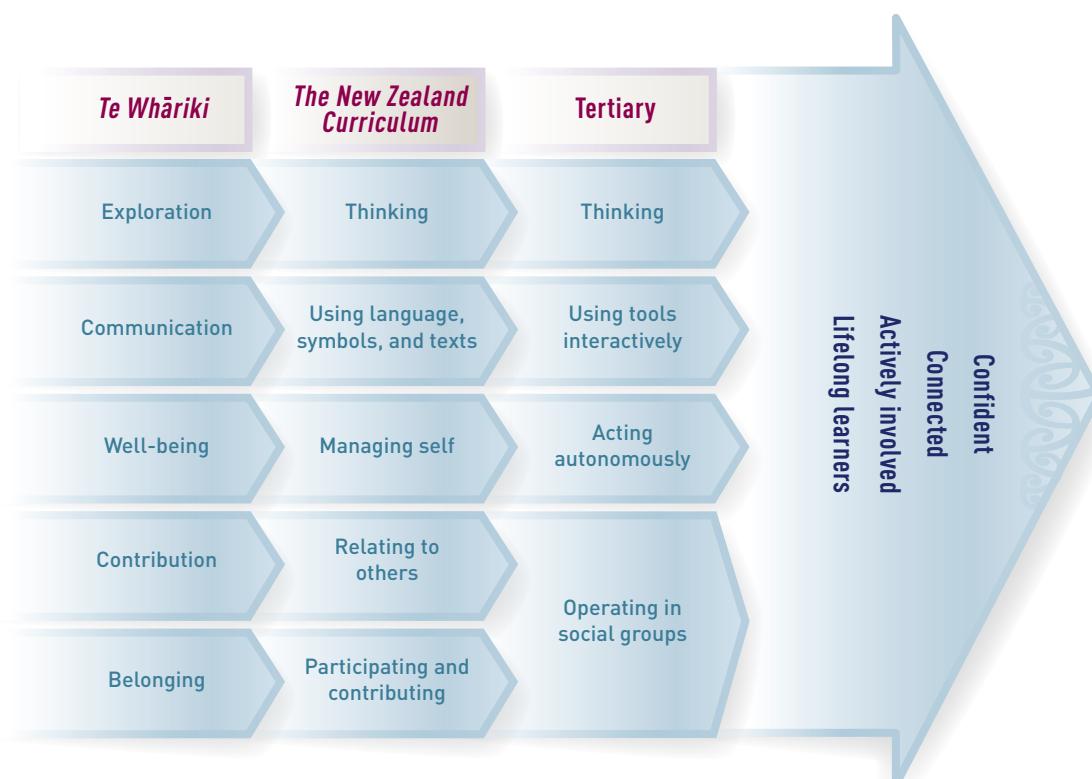

understandings, developed and explored in depth, which provide a foundation for knowledge creation.

Tertiary education builds on the values, competencies, discipline knowledge, and qualifications that students have developed or gained during their school years. Recognising the importance of key competencies to success at tertiary level, the sector has identified four as crucial: thinking, using tools interactively, acting autonomously, and operating in social groups. These correspond closely to the five key competencies defined in this document.

In the past, many young people finished all formal learning when they left school. Today, all school leavers, including those who go directly into paid employment, should take every opportunity to continue learning and developing their capabilities. New Zealand needs its young people to be skilled and educated, able to contribute fully to its well-being, and able to meet the changing needs of the workplace and the economy.

The key competencies: Cross-sector alignment

This diagram suggests how the tertiary competencies align with those of *Te Whāriki* and *The New Zealand Curriculum*:

The School Curriculum

Requirements for Boards of Trustees

Each board of trustees, through the principal and staff, is required to develop and implement a curriculum for students in years 1–13:

- that is underpinned by and consistent with the principles set out on page 9;
- in which the values set out on page 10 are encouraged and modelled and are explored by students;
- that supports students to develop the key competencies set out on pages 12–13.

Each board of trustees, through the principal and staff, is required to provide all students in years 1–10 with effectively taught programmes of learning in:

English, as specified on page 18; the arts, as specified on pages 20–21; health and physical education, as specified on pages 22–23; mathematics and statistics, as specified on page 26; science, as specified on pages 28–29; social sciences, as specified on page 30; and technology, as specified in the supplement.

When designing and reviewing their curriculum, schools select achievement objectives from each area in response to the identified interests and learning needs of their students. For learning in digital technologies, schools need to provide learning opportunities in line with the progress outcomes from the technology learning area.

Note: All schools with students in years 7–10 should be working towards offering students opportunities for learning a second or subsequent language. Teaching programmes should be based on the learning languages statement found on pages 24–25 and the achievement objectives for this learning area. Teaching programmes for students in years 11–13 should be based, in the first instance, on the appropriate national curriculum statements.

Each board of trustees, through the principal and staff, is required:

- to gather information that is sufficiently comprehensive to enable evaluation of student progress and achievement;
- to identify students and groups of students who are not achieving, who are at risk of not achieving, or who have special needs and to identify aspects of the curriculum that require particular attention;
- in consultation with the school's Māori community, to develop and make known its plans and targets for improving the achievement of Māori students.

Each board of trustees, through the principal and staff, is required to implement its curriculum in accordance with the priorities set out in the National Education Goals and the National Administration Guidelines.

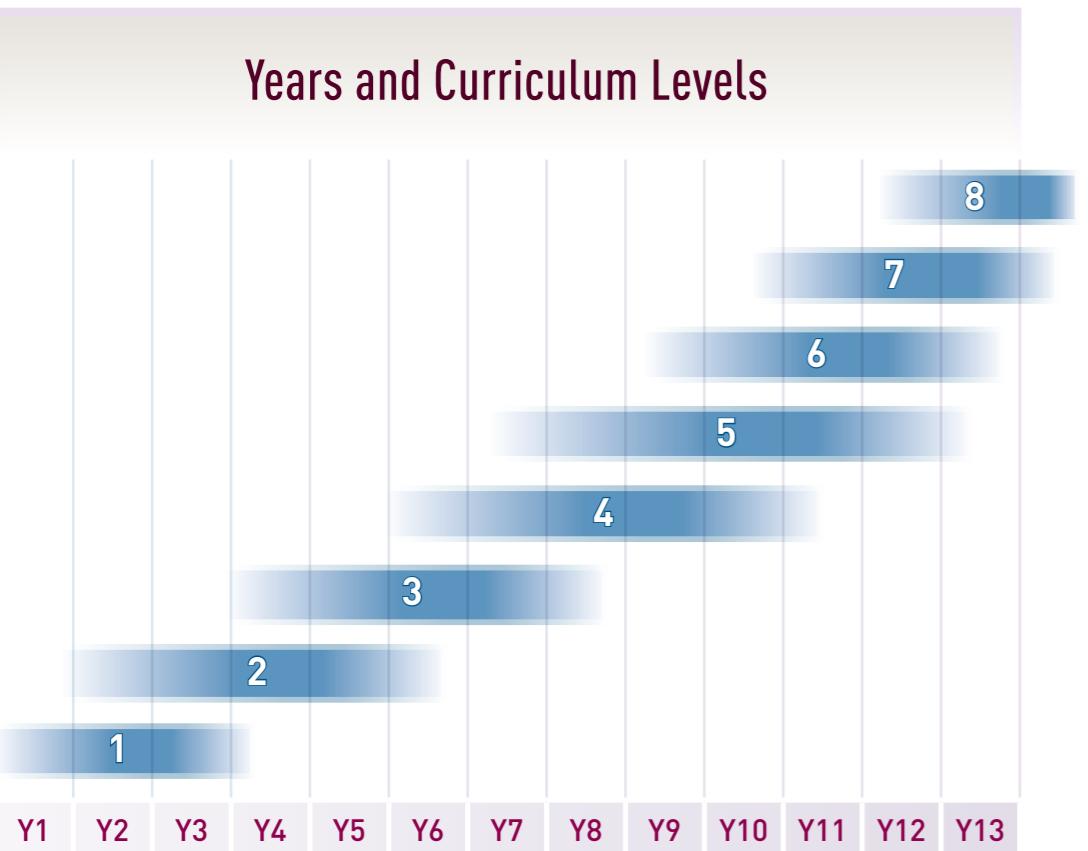

These requirements will be confirmed by notice in *The New Zealand Gazette*.

Years and Curriculum Levels

This diagram shows how curriculum levels typically relate to years at school. Many students do not, however, fit this pattern. They include those with special learning needs, those who are gifted, and those who come from non-English-speaking backgrounds. Students learning an additional language are also unlikely to follow the suggested progression: level 1 is the entry level for those with no prior knowledge of the language being learned, regardless of their school year.

Achievement Objectives by Level

The fold-out charts that follow group achievement objectives by level. This format facilitates cross-curricular collaborative planning and assessment. The achievement objectives are also available in a format that sets them out by levels within learning areas. In some cases, this second set of charts provides additional information.

Level One English

Listening, Reading, and Viewing

Processes and strategies

- Students will:**
- Acquire and begin to use sources of information, processes, and strategies to identify, form, and express ideas.
- INDICATORS:**
- selects and reads texts for enjoyment and personal fulfilment;
 - has an awareness of the connections between oral, written, and visual language;
 - uses sources of information (meaning, structure, visual and grapho-phonetic information) and prior knowledge to make sense of a range of texts;
 - associates sounds with letter clusters as well as with individual letters;
 - uses processing and some comprehension strategies with some confidence;
 - is developing the ability to think critically about texts;
 - begins to monitor, self-evaluate, and describe progress.

By using these processes and strategies when listening, reading, or viewing, students will:

Purposes and audiences

- Recognise that texts are shaped for different purposes and audiences.

INDICATORS:

- identifies the purposes of simple texts;
- evaluates the usefulness of simple texts.

Ideas

- Recognise and identify ideas within and across texts.

INDICATORS:

- understands that personal experience can influence the meaning gained from texts;
- makes meaning of texts by identifying ideas in some texts.

Language features

- Recognise and begin to understand how language features are used for effect within and across texts.

INDICATORS:

- begins to recognise that oral, written, and visual language features can be used for effect;
- recognises a large bank of high-frequency and some topic-specific words;
- shows some knowledge of text conventions, such as: capital letters, full stops, and word order; volume and clarity; and simple symbols.

Structure

- Recognise and begin to understand text structures.

INDICATORS:

- understands that the order and organisation of words, sentences, and images contribute to text meaning;
- recognises some text forms and some differences between them.

Speaking, Writing, and Presenting

Processes and strategies

Students will:

- Acquire and begin to use sources of information, processes, and strategies to identify, form, and express ideas.
- INDICATORS:**
- has an awareness of the connections between oral, written, and visual language when creating text;
 - creates texts by using meaning, structure, visual and grapho-phonetic sources of information, prior knowledge, and some processing strategies with some confidence;
 - seeks feedback and makes changes to texts;
 - is becoming reflective about the production of own texts;
 - begins to monitor, self-evaluate, and describe progress.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Recognise how to shape texts for a purpose and an audience.

INDICATORS:

- constructs texts that demonstrate some awareness of purpose and audience through appropriate choice of content, language, and text form;
- expects the texts they create to be understood, responded to, and appreciated by others;
- is developing and conveying personal voice where appropriate.

Ideas

- Form and express ideas on a range of topics.

INDICATORS:

- forms and expresses simple ideas and information, usually drawing from personal experience and knowledge;
- begins to support ideas with some detail.

Language features

- Use language features, showing some recognition of their effects.

INDICATORS:

- uses some oral, written, and visual language features to create meaning and effect;
- uses a range of high-frequency, topic-specific, and personal-content words to create meaning;
- spells some high-frequency words correctly and begins to use some common spelling patterns;
- begins to use some strategies to self-correct and monitor spelling;
- writes most letters and number forms legibly when creating texts;
- begins to gain control of text conventions, such as: capital letters and full stops; some basic grammatical conventions; volume, clarity, and tone; and simple symbols.

Structure

- Organise texts, using simple structures.

INDICATORS:

- uses knowledge of word and sentence order to communicate meaning in simple texts;
- begins to sequence ideas and information;
- uses simple sentences with some variation in beginnings;
- may attempt compound and complex sentences.

Level One The Arts

Understanding the Arts in Context

Dance

Students will:

- Demonstrate an awareness of dance in their lives and in their communities.

Developing Practical Knowledge

Developing Ideas

Students will:

- Explore movement with a developing awareness of the dance elements of body, space, time, energy, and relationships.
- Improvise and explore movement ideas in response to a variety of stimuli.

Communicating and Interpreting

Communicating and Interpreting

Students will:

- Share dance movement through informal presentation and share their thoughts and feelings in response to their own and others' dances.

Drama

Students will:

- Demonstrate an awareness that drama serves a variety of purposes in their lives and in their communities.

Developing Ideas

Developing Ideas

Students will:

- Explore the elements of role, focus, action, tension, time, and space through dramatic play.

Communicating and Interpreting

Communicating and Interpreting

Students will:

- Contribute and develop ideas in drama, using personal experience and imagination.
- Share drama through informal presentation and respond to ways in which drama tells stories and conveys ideas in their own and others' work.

Music – Sound Arts

Students will:

- Explore and share ideas about music from a range of sound environments and recognise that music serves a variety of purposes and functions in their lives and in their communities.

Developing Ideas

Developing Ideas

Students will:

- Explore how sound is made, as they listen and respond to the elements of music: beat, rhythm, pitch, tempo, dynamics, and tone colour.
- Explore and express sounds and musical ideas, drawing on personal experience, listening, and imagination.
- Explore ways to represent sound and musical ideas.

Communicating and Interpreting

Communicating and Interpreting

Students will:

- Share music making with others.
- Respond to live and recorded music.

Visual Arts

Students will:

- Share ideas about how and why their own and others' works are made and their purpose, value, and context.

Developing Ideas

Developing Ideas

Students will:

- Explore a variety of materials and tools and discover elements and selected principles.
- Investigate visual ideas in response to a variety of motivations, observation, and imagination.

Communicating and Interpreting

Communicating and Interpreting

Students will:

- Share the ideas, feelings, and stories communicated by their own and others' objects and images.

Level One Health and Physical Education

Personal Health and Physical Development

Students will:

Personal growth and development

Students will:

- Describe feelings and ask questions about their health, growth, development, and personal needs and wants.

Movement Concepts and Motor Skills

Students will:

Movement skills; Science and technology

Students will:

- Develop a wide range of movement skills, using a variety of equipment and play environments.

Relationships with Other People

Students will:

Relationships

Students will:

- Explore and share ideas about relationships with other people.

Healthy Communities and Environments

Students will:

Community resources

Students will:

- Identify and discuss obvious hazards in their home, school, and local environment and adopt simple safety practices.

Identity, sensitivity, and respect

Students will:

Rights, responsibilities, and laws; People and the environment

Students will:

- Take individual and collective action to contribute to environments that can be enjoyed by all.

Key Competencies

Thinking

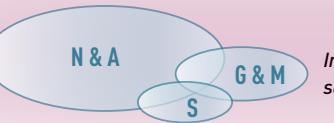

Using language, symbols, and texts

Managing self

Relating to others

Participating and contributing

Level One Mathematics and Statistics

In a range of meaningful contexts, students will be engaged in thinking mathematically and statistically. They will solve problems and model situations that require them to:

Number and Algebra

Number strategies

- Use a range of counting, grouping, and equal-sharing strategies with whole numbers and fractions.

Number knowledge

- Know the forward and backward counting sequences of whole numbers to 100.
- Know groupings with five, within ten, and with ten.

Equations and expressions

- Communicate and explain counting, grouping, and equal-sharing strategies, using words, numbers, and pictures.

Patterns and relationships

- Generalise that the next counting number gives the result of adding one object to a set and that counting the number of objects in a set tells how many.
- Create and continue sequential patterns.

Geometry and Measurement

Measurement

- Order and compare objects or events by length, area, volume and capacity, weight (mass), turn (angle), temperature, and time by direct comparison and/or counting whole numbers of units.

Shape

- Sort objects by their appearance.

Position and orientation

- Give and follow instructions for movement that involve distances, directions, and half or quarter turns.

- Describe their position relative to a person or object.

Transformation

- Communicate and record the results of translations, reflections, and rotations on plane shapes.

Statistics

Statistical investigation

- Conduct investigations using the statistical enquiry cycle:
 - posing and answering questions;
 - gathering, sorting and counting, and displaying category data;
 - discussing the results.

Statistical literacy

- Interpret statements made by others from statistical investigations and probability activities.

Probability

- Investigate situations that involve elements of chance, acknowledging and anticipating possible outcomes.

Levels One and Two Science

Nature of Science

Students will:

Understanding about science

- Appreciate that scientists ask questions about our world that lead to investigations and that open-mindedness is important because there may be more than one explanation.

Investigating in science

- Extend their experiences and personal explanations of the natural world through exploration, play, asking questions, and discussing simple models.

Communicating in science

- Build their language and develop their understandings of the many ways the natural world can be represented.

Participating and contributing

- Explore and act on issues and questions that link their science learning to their daily living.

Living World

Students will:

Life processes

- Recognise that all living things have certain requirements so they can stay alive.

Planet Earth and Beyond

Students will:

Earth systems

- Explore and describe natural features and resources.

Physical World

Students will:

Physical inquiry and physics concepts

- Explore everyday examples of physical phenomena, such as movement, forces, electricity and magnetism, light, sound, waves, and heat.
- Seek and describe simple patterns in physical phenomena.

Material World

Students will:

Properties and changes of matter

- Observe, describe, and compare physical and chemical properties of common materials and changes that occur when materials are mixed, heated, or cooled.
- Find out about the uses of common materials and relate these to their observed properties.

Ecology

Ecology

- Recognise that living things are suited to their particular habitat.

Astronomical systems

Evolution

- Share ideas and observations about the Sun and the Moon and their physical effects on the heat and light available to Earth.

Evolution

- Recognise that there are lots of different living things in the world and that they can be grouped in different ways.

- Explain how we know that some living things from the past are now extinct.

See separate chart Learning Languages

Level One Social Sciences

Social Studies

Students will gain knowledge, skills, and experience to:

- Understand how belonging to groups is important for people.
- Understand that people have different roles and responsibilities as part of their participation in groups.
- Understand how the past is important to people.
- Understand how places in New Zealand are significant for individuals and groups.
- Understand how the cultures of people in New Zealand are expressed in their daily lives.

Level One Technology

Technological Practice

Students will:

Planning for practice

- Outline a general plan to support the development of an outcome, identifying appropriate steps and resources.

Brief development

- Describe the outcome they are developing and identify the attributes it should have, taking account of the need or opportunity and the resources available.

Outcome development and evaluation

- Investigate a context to communicate potential outcomes. Evaluate these against attributes; select and develop an outcome in keeping with the identified attributes.

Technological Knowledge

Students will:

Technological modelling

- Understand that functional models are used to represent reality and test design concepts and that prototypes are used to test technological outcomes.

Technological products

- Understand that technological products are made from materials that have performance properties.

Technological systems

- Understand that technological systems have inputs, controlled transformations, and outputs.

Nature of Technology

Students will:

Characteristics of technology

- Understand that technology is purposeful intervention through design.

Characteristics of technological outcomes

- Understand that technological outcomes are products or systems developed by people and have a physical nature and a functional nature.

REPLACED - PREFER INSERT

Level Two English

Listening, Reading, and Viewing

Processes and strategies

- Students will:**
- Select and use sources of information, processes, and strategies with some confidence to identify, form, and express ideas.
 - INDICATORS:**
 - selects and reads texts for enjoyment and personal fulfilment;
 - recognises connections between oral, written, and visual language;
 - selects and uses sources of information (meaning, structure, visual and grapho-phonetic information) and prior knowledge with growing confidence to make sense of increasingly varied and complex texts;
 - uses an increasing knowledge of letter clusters, affixes, roots, and compound words to confirm predictions;
 - selects and uses processing strategies and an increasing range of comprehension strategies with some understanding and confidence;
 - thinks critically about texts with some confidence;
 - monitors, self-evaluates, and describes progress with some confidence.

By using these processes and strategies when listening, reading, or viewing, students will:

Purposes and audiences

- Show some understanding of how texts are shaped for different purposes and audiences.
- INDICATORS:**
 - recognises how texts are constructed for different purposes, audiences, and situations;
 - understands that texts are created from a particular point of view;
 - evaluates the reliability and usefulness of texts with some confidence.

Ideas

- Show some understanding of ideas within, across, and beyond texts.

INDICATORS:

- uses their personal experience and world and literacy knowledge to make meaning from texts;
- makes meaning of increasingly complex texts by identifying main ideas;
- makes and supports inferences from texts with some independence.

Language features

- Show some understanding of how language features are used for effect within and across texts.

INDICATORS:

- recognises that oral, written, and visual language features can be used for effect;
- uses a large and increasing bank of high-frequency, topic-specific, and personal-content words to make meaning;
- shows an increasing knowledge of the conventions of text;
- recognises that authors have different voices and styles.

Structure

- Show some understanding of text structures.

INDICATORS:

- understands that the order and organisation of words, sentences, paragraphs, and images contribute to text meaning;
- recognises an increasing range of text forms and differences between them.

Speaking, Writing, and Presenting

Processes and strategies

Students will:

- Select and use sources of information, processes, and strategies with some confidence to identify, form, and express ideas.
- INDICATORS:**
 - shows some understanding of the connections between oral, written, and visual language when creating texts;
 - creates texts by using meaning, structure, visual and grapho-phonetic sources of information, and processing strategies with growing confidence;
 - seeks feedback and makes changes to texts to improve clarity and meaning;
 - is reflective about the production of texts: monitors, self-evaluates, and describes progress with some confidence.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show some understanding of how to shape texts for different purposes and audiences.
- INDICATORS:**
 - constructs texts that demonstrate a growing awareness of audience and purpose through appropriate choice of content, language, and text form;
 - expects the texts they create to be understood, responded to, and appreciated by others;
 - develops and conveys personal voice where appropriate.

Ideas

- Select, form, and express ideas on a range of topics.
- INDICATORS:**
 - forms and expresses ideas and information with reasonable clarity, often drawing on personal experience and knowledge;
 - begins to add or delete details and comments, showing some selectivity in the process.

Language features

- Use language features appropriately, showing some understanding of their effects.

INDICATORS:

- uses oral, written, and visual language features to create meaning and effect;
- uses a large and increasing bank of high-frequency, topic-specific, and personal-content words to create meaning;
- spells most high-frequency words correctly and shows growing knowledge of common spelling patterns;
- uses a range of strategies to self-monitor and self-correct spelling;
- writes legibly and with increasing fluency when creating texts;
- gains increasing control of text conventions, including some grammatical conventions.

Structure

- Organise texts, using a range of structures.

INDICATORS:

- uses knowledge of word and sentence order to communicate meaning when creating text;
- organises and sequences ideas and information with some confidence;
- begins to use a variety of sentence structures, beginnings, and lengths.

Level Two The Arts

Understanding the Arts in Context

Dance

Students will:

- Select and use sources of information, processes, and strategies with some confidence to identify, form, and express ideas.
- INDICATORS:**
 - shows some understanding of the connections between oral, written, and visual language when creating texts;
 - creates texts by using meaning, structure, visual and grapho-phonetic sources of information, and processing strategies with growing confidence;
 - seeks feedback and makes changes to texts to improve clarity and meaning;
 - is reflective about the production of texts: monitors, self-evaluates, and describes progress with some confidence.

Drama

Students will:

- Identify and describe how drama serves a variety of purposes in their lives and their communities.

Music – Sound Arts

Students will:

- Explore and share ideas about music from a range of sound environments and recognise that music serves a variety of purposes and functions in their lives and in their communities.

Visual Arts

Students will:

- Share ideas about how and why their own and others' works are made and their purpose, value, and context.

Ideas

- Explore a variety of materials and tools and discover elements and selected principles.

- Investigate and develop visual ideas in response to a variety of motivations, observation, and imagination.

- Share the ideas, feelings, and stories communicated by their own and others' objects and images.

Developing Practical Knowledge

Dance

Students will:

- Identify and describe dance in their lives and in their communities.
- Explore and identify, through movement, the dance elements of body, space, time, energy, and relationships.

Drama

Students will:

- Explore and use elements of drama for different purposes.

Music – Sound Arts

Students will:

- Explore and identify how sound is made and changed, as they listen and respond to the elements of music and structural devices.
- Improvise, explore, and express musical ideas, drawing on personal experience, listening, and imagination.
- Explore ways to represent sound and musical ideas.

Ideas

- Investigate and develop visual ideas in response to a variety of motivations, observation, and imagination.

Developing Ideas

Dance

Students will:

- Use the elements of dance in purposeful ways to respond to a variety of stimuli.

Drama

Students will:

- Develop and sustain ideas in drama, based on personal experience and imagination.

Music – Sound Arts

Students will:

- Share drama through informal presentation and respond to elements of drama in their own and others' work.
- Share music making with others, using basic performance skills and techniques.
- Respond to live and recorded music.

Ideas

- Share the ideas, feelings, and stories communicated by their own and others' objects and images.

Communicating and Interpreting

Dance

Students will:

- Share dance movement through informal presentation and identify the use of the elements of dance.

Drama

Students will:

- Share drama through informal presentation and respond to elements of drama in their own and others' work.

Music – Sound Arts

Students will:

- Share music making with others, using basic performance skills and techniques.
- Respond to live and recorded music.

Ideas

- Share the ideas, feelings, and stories communicated by their own and others' objects and images.

Level Two Health and Physical Education

Personal Health and Physical Development

Students will:

- Personal growth and development**
- Movement skills**

Students will:

- Describe their stages of growth and their development needs and demonstrate increasing responsibility for self-care.
- Practise movement skills and demonstrate the ability to link them in order to perform movement sequences.

Positive attitudes

- Participate in and create a variety of games and activities and discuss the enjoyment that these activities can bring to them and others.

Safety management

- Identify risk and use safe practices in a range of contexts and identify how this enhances movement experiences.
- Use modified equipment in a range of contexts and identify how this enhances movement experiences.

Personal identity

- Identify personal qualities that contribute to a sense of self-worth.
- Develop and apply rules and practices in games and activities to promote fair, safe, and culturally appropriate participation for all.

Challenges and social and cultural factors

- Participate in and create a variety of games and activities and discuss the enjoyment that these activities can bring to them and others.
- Identify personal qualities that contribute to a sense of self-worth.
- Develop and apply rules and practices in games and activities to promote fair, safe, and culturally appropriate participation for all.

Community resources

- Identify and demonstrate ways of maintaining and enhancing relationships between individuals and within groups.
- Describe how individuals and groups share characteristics and are also unique.

Rights, responsibilities, and laws; People and the environment

- Explore how people's attitudes, values, and actions contribute to healthy physical and social environments.
- Identify and use local community resources and explain how these contribute to a healthy community.
- Contribute to and use simple guidelines and practices that promote physically and socially healthy classrooms, schools, and local environments.

Movement Concepts and Motor Skills

Students will:

- Relationships with Other People**
- Relationships**

Students will:

- Identify and demonstrate ways of maintaining and enhancing relationships between individuals and within groups.
- Identify and demonstrate ways of maintaining and enhancing relationships between individuals and within groups.

Identity, sensitivity, and respect

- Describe how individuals and groups share characteristics and are also unique.

Interpersonal skills

- Describe how individuals and groups share characteristics and are also unique.

Science and technology

- Express their ideas, needs, wants, and feelings appropriately and listen sensitively to other people and affirm them.

Challenges and social and cultural factors

- Contribute to and use simple guidelines and practices that promote physically and socially healthy classrooms, schools, and local environments.

Community resources

- Identify and demonstrate ways of maintaining and enhancing relationships between individuals and within groups.
- Describe how individuals and groups share characteristics and are also unique.
- Identify and use local community resources and explain how these contribute to a healthy community.

Rights, responsibilities, and laws; People and the environment

- Explore how people's attitudes, values, and actions contribute to healthy physical and social environments.
- Identify and use local community resources and explain how these contribute to a healthy community.
- Contribute to and use simple guidelines and practices that promote physically and socially healthy classrooms, schools, and local environments.

Healthy Communities and Environments

- Explore how people's attitudes, values, and actions contribute to healthy physical and social environments.
- Identify and use local community resources and explain how these contribute to a healthy community.
- Contribute to and use simple guidelines and practices that promote physically and socially healthy classrooms, schools, and local environments.

Relationships with Other People

Students will:

- Relationships with Other People**
- Relationships**

Students will:

- Identify and demonstrate ways of maintaining and enhancing relationships between individuals and within groups.
- Identify and demonstrate ways of maintaining and enhancing relationships between individuals and within groups.

Identity, sensitivity, and respect

- Describe how individuals and groups share characteristics and are also unique.

Interpersonal skills

- Describe how individuals and groups share characteristics and are also unique.

Science and technology

Level Two Mathematics and Statistics

In a range of meaningful contexts, students will be engaged in thinking mathematically and statistically. They will solve problems and model situations that require them to:

Number and Algebra

Number strategies

- Use simple additive strategies with whole numbers and fractions.

Number knowledge

- Know forward and backward counting sequences with whole numbers to at least 1000.
- Know the basic addition and subtraction facts.
- Know how many ones, tens, and hundreds are in whole numbers to at least 1000.
- Know simple fractions in everyday use.

Equations and expressions

- Communicate and interpret simple additive strategies, using words, diagrams (pictures), and symbols.

Patterns and relationships

- Generalise that whole numbers can be partitioned in many ways.
- Find rules for the next member in a sequential pattern.

Geometry and Measurement

Measurement

- Create and use appropriate units and devices to measure length, area, volume and capacity, weight (mass), turn (angle), temperature, and time.
- Partition and/or combine like measures and communicate them, using numbers and units.

Shape

- Sort objects by their spatial features, with justification.
- Identify and describe the plane shapes found in objects.

Position and orientation

- Create and use simple maps to show position and direction.
- Describe different views and pathways from locations on a map.

Transformation

- Predict and communicate the results of translations, reflections, and rotations on plane shapes.

Statistics

Statistical investigation

- Conduct investigations using the statistical enquiry cycle:
 - posing and answering questions;
 - gathering, sorting, and displaying category and whole-number data;
 - communicating findings based on the data.

Statistical literacy

- Compare statements with the features of simple data displays from statistical investigations or probability activities undertaken by others.

Probability

- Investigate simple situations that involve elements of chance, recognising equal and different likelihoods and acknowledging uncertainty.

Levels One and Two Science

Level Two Social Sciences

See separate chart Learning Languages

Nature of Science

Students will:

Understanding about science

- Appreciate that scientists ask questions about our world that lead to investigations and that open-mindedness is important because there may be more than one explanation.

Investigating in science

- Extend their experiences and personal explanations of the natural world through exploration, play, asking questions, and discussing simple models.

Communicating in science

- Build their language and develop their understandings of the many ways the natural world can be represented.

Social Studies

Students will gain knowledge, skills, and experience to:

- Understand that people have social, cultural, and economic roles, rights, and responsibilities.
- Understand how people make choices to meet their needs and wants.
- Understand how cultural practices reflect and express people's customs, traditions, and values.
- Understand how time and change affect people's lives.
- Understand how places influence people and people influence places.
- Understand how people make significant contributions to New Zealand's society.
- Understand how the status of Māori as tangata whenua is significant for communities in New Zealand.

Level Two Technology

Technological Knowledge

Students will:

Technological modelling

- Understand that functional models are used to explore, test, and evaluate design concepts for potential outcomes and that prototyping is used to test a technological outcome for fitness of purpose.

Nature of Technology

Students will:

Characteristics of technology

- Understand that technology both reflects and changes society and the environment and increases people's capability.

Characteristics of technological outcomes

- Understand that technological outcomes are developed through technological practice and have related physical and functional natures.

Technological products

- Understand that there is a relationship between a material used and its performance properties in a technological product.

Technological systems

- Understand that there are relationships between the inputs, controlled transformations, and outputs occurring within simple technological systems.

REPLACEMENT REFER INSERT

Level Three English

Listening, Reading, and Viewing

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies with developing confidence to identify, form, and express ideas.
- INDICATORS:**
 - selects and reads texts for enjoyment and personal fulfilment;
 - recognises and understands the connections between oral, written, and visual language;
 - integrates sources of information and prior knowledge with developing confidence to make sense of increasingly varied and complex texts;
 - selects and uses a range of processing and comprehension strategies with growing understanding and confidence;
 - thinks critically about texts with developing confidence;
 - monitors, self-evaluates, and describes progress with growing confidence.

By using these processes and strategies when listening, reading, or viewing, students will:

Purposes and audiences

- Show a developing understanding of how texts are shaped for different purposes and audiences.
- INDICATORS:**
 - recognises and understands how texts are constructed for a range of purposes, audiences, and situations;
 - identifies particular points of view and begins to recognise that texts can position a reader;
 - evaluates the reliability and usefulness of texts with increasing confidence.

Ideas

- Show a developing understanding of ideas within, across, and beyond texts.
- INDICATORS:**
 - uses their personal experience and world and literacy knowledge confidently to make meaning from texts;
 - makes meaning of increasingly complex texts by identifying main and subsidiary ideas in them;
 - starts to make connections by thinking about underlying ideas in and between texts;
 - recognises that there may be more than one reading available within a text;
 - makes and supports inferences from texts with increasing independence.

Language features

- Show a developing understanding of how language features are used for effect within and across texts.
- INDICATORS:**
 - identifies oral, written, and visual language features used in texts and recognises their effects;
 - uses an increasing vocabulary to make meaning;
 - shows an increasing knowledge of how a range of text conventions can be used appropriately;
 - knows that authors have different voices and styles and can identify some of these differences.

Structure

- Show a developing understanding of text structures.
- INDICATORS:**
 - understands that the order and organisation of words, sentences, paragraphs, and images contribute to and affect text meaning;
 - identifies a range of text forms and recognises some of their characteristics and conventions.

Speaking, Writing, and Presenting

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies with developing confidence to identify, form, and express ideas.
- INDICATORS:**
 - uses a developing understanding of the connections between oral, written, and visual language when creating texts;
 - creates a range of texts by integrating sources of information and processing strategies with developing confidence;
 - seeks feedback and makes changes to texts to improve clarity, meaning, and effect;
 - is reflective about the production of own texts: monitors and self-evaluates progress, articulating learning with growing confidence.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show a developing understanding of how to shape texts for different purposes and audiences.
- INDICATORS:**
 - constructs texts that show a growing awareness of purpose and audience through careful choice of content, language, and text form;
 - conveys and sustains personal voice where appropriate.

Ideas

- Select, form, and communicate ideas on a range of topics.
- INDICATORS:**
 - forms and expresses ideas and information with increased clarity, drawing on a range of sources;
 - adds or changes details and comments to support ideas, showing some selectivity in the process;
 - ideas suggest awareness of a range of dimensions or viewpoints.

Language features

- Use language features appropriately, showing a developing understanding of their effects.
- INDICATORS:**
 - uses oral, written, and visual language features to create meaning and effect and engage interest;
 - uses a range of vocabulary to communicate meaning;
 - demonstrates good understanding of all basic spelling patterns and sounds in written English;
 - uses an increasing range of strategies to self-monitor and self-correct spelling;
 - writes legibly, fluently, and with ease when creating texts;
 - uses a range of text conventions, including most grammatical conventions, appropriately and with increasing accuracy.

Structure

- Organise texts, using a range of appropriate structures.
- INDICATORS:**
 - organises written ideas into paragraphs with increasing confidence;
 - organises and sequences ideas and information with increasing confidence;
 - uses a variety of sentence structures, beginnings, and lengths.

Level Three The Arts

Understanding the Arts in Context

Dance

Students will:

- Explore and describe dances from a variety of cultures.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show a developing understanding of how to shape texts for different purposes and audiences.

Indicators

- constructs texts that show a growing awareness of purpose and audience through careful choice of content, language, and text form;

Ideas

- Select, form, and communicate ideas on a range of topics.

Language features

- Use language features appropriately, showing a developing understanding of their effects.

Structure

- Organise texts, using a range of appropriate structures.

Developing Practical Knowledge

Drama

Students will:

- Use the dance elements to develop and share their personal movement vocabulary.

Music – Sound Arts

Students will:

- Investigate the functions and purposes of drama in cultural and historical contexts.

Visual Arts

Students will:

- Use techniques and relevant technologies to explore drama elements and conventions.

Developing Ideas

Students will:

- Select and combine dance elements in response to a variety of stimuli.

Music – Sound Arts

Students will:

- Initiate and develop ideas with others to create drama.

Visual Arts

Students will:

- Present and respond to drama, identifying ways in which elements, techniques, conventions, and technologies combine to create meaning in their own and others' work.

Developing Ideas

Students will:

- Explore and identify how sound is made and changed, as they listen and respond to music and apply knowledge of the elements of music, structural devices, and technologies.

Music – Sound Arts

Students will:

- Explore ideas about how music serves a variety of purposes and functions in their lives and in their communities.

Visual Arts

Students will:

- Express and shape musical ideas, using musical elements, instruments, and technologies in response to sources of motivation.

Visual Arts

Students will:

- Represent sound and musical ideas in a variety of ways.

Developing Ideas

Students will:

- Prepare and present brief performances of music, using performance skills and techniques.

Visual Arts

Students will:

- Respond to and reflect on live and recorded music.

Developing Ideas

Students will:

- Explore some art-making conventions, applying knowledge of elements and selected principles through the use of materials and processes.

Visual Arts

Students will:

- Develop and revisit visual ideas, in response to a variety of motivations, observation, and imagination, supported by the study of artists' works.

Developing Ideas

Students will:

- Describe the ideas their own and others' objects and images communicate.

Communicating and Interpreting

Dance

Students will:

- Prepare and share dance movement individually and in pairs or groups.

Music – Sound Arts

Students will:

- Use the elements of dance to describe dance movements and respond to dances from a variety of cultures.

Visual Arts

Students will:

- Present and respond to drama, identifying ways in which elements, techniques, conventions, and technologies combine to create meaning in their own and others' work.

Visual Arts

Students will:

- Explore and identify how sound is made and changed, as they listen and respond to music and apply knowledge of the elements of music, structural devices, and technologies.

Visual Arts

Students will:

- Explore ideas about how music serves a variety of purposes and functions in their lives and in their communities.

Visual Arts

Students will:

- Express and shape musical ideas, using musical elements, instruments, and technologies in response to sources of motivation.

Visual Arts

Students will:

- Represent sound and musical ideas in a variety of ways.

Visual Arts

Students will:

- Prepare and present brief performances of music, using performance skills and techniques.

Visual Arts

Students will:

- Respond to and reflect on live and recorded music.

Visual Arts

Students will:

- Explore some art-making conventions, applying knowledge of elements and selected principles through the use of materials and processes.

Visual Arts

Students will:

- Develop and revisit visual ideas, in response to a variety of motivations, observation, and imagination, supported by the study of artists' works.

Visual Arts

Students will:

- Describe the ideas their own and others' objects and images communicate.

Level Three Health and Physical Education

Personal Health and Physical Development

Students will:

Personal growth and development

- Identify factors that affect personal, physical, social, and emotional growth and develop skills to manage changes.

Regular physical activity

- Maintain regular participation in enjoyable physical activities in a range of environments and describe how these challenges impact on themselves and other people.

Safety management

- Identify risks and their causes and describe safe practices to manage these.

Personal identity

- Describe how their own feelings, beliefs, and actions, and those of other people, contribute to their personal sense of self-worth.

Challenges and social and cultural factors

- Participate in co-operative and competitive activities and describe how co-operation and competition can affect people's behaviour and the quality of the experience.

Movement Concepts and Motor Skills

Students will:

Movement skills

- Develop more complex movement sequences and strategies in a range of situations.

Positive attitudes

- Develop movement skills in challenging situations and describe how these assist in the promotion of well-being.

Interpersonal skills

- Identify ways in which people discriminate and ways to act responsibly to support themselves and other people.

Rights, responsibilities, and laws

- Research and describe current health and safety guidelines and practices in their school and take action to enhance their effectiveness.

Relationships with Other People

Students will:

Level Three Mathematics and Statistics

In a range of meaningful contexts, students will be engaged in thinking mathematically and statistically. They will solve problems and model situations that require them to:

Number and Algebra

Number strategies

- Use a range of additive and simple multiplicative strategies with whole numbers, fractions, decimals, and percentages.

Number knowledge

- Know basic multiplication and division facts.
- Know counting sequences for whole numbers.
- Know how many tenths, tens, hundreds, and thousands are in whole numbers.
- Know fractions and percentages in everyday use.

Equations and expressions

- Record and interpret additive and simple multiplicative strategies, using words, diagrams, and symbols, with an understanding of equality.

Patterns and relationships

- Generalise the properties of addition and subtraction with whole numbers.
- Connect members of sequential patterns with their ordinal position and use tables, graphs, and diagrams to find relationships between successive elements of number and spatial patterns.

Geometry and Measurement

Measurement

- Use linear scales and whole numbers of metric units for length, area, volume and capacity, weight (mass), angle, temperature, and time.
- Find areas of rectangles and volumes of cuboids by applying multiplication.

Shape

- Classify plane shapes and prisms by their spatial features.
- Represent objects with drawings and models.

Position and orientation

- Use a co-ordinate system or the language of direction and distance to specify locations and describe paths.

Transformation

- Describe the transformations (reflection, rotation, translation, or enlargement) that have mapped one object onto another.

Statistics

Statistical investigation

- Conduct investigations using the statistical enquiry cycle:
 - gathering, sorting, and displaying multivariate category and whole-number data and simple time-series data to answer questions;
 - identifying patterns and trends in context, within and between data sets;
 - communicating findings, using data displays.

Statistical literacy

- Evaluate the effectiveness of different displays in representing the findings of a statistical investigation or probability activity undertaken by others.

Probability

- Investigate simple situations that involve elements of chance by comparing experimental results with expectations from models of all the outcomes, acknowledging that samples vary.

Level Three Science

Nature of Science

Students will:

Understanding about science

- Appreciate that science is a way of explaining the world and that science knowledge changes over time.
- Identify ways in which scientists work together and provide evidence to support their ideas.

Investigating in science

- Build on prior experiences, working together to share and examine their own and others' knowledge.
- Ask questions, find evidence, explore simple models, and carry out appropriate investigations to develop simple explanations.

Communicating in science

- Begin to use a range of scientific symbols, conventions, and vocabulary.
- Engage with a range of science texts and begin to question the purposes for which these texts are constructed.

Participating and contributing

- Use their growing science knowledge when considering issues of concern to them.
- Explore various aspects of an issue and make decisions about possible actions.

Living World

Students will:

Life processes

- Recognise that there are life processes common to all living things and that these occur in different ways.

Planet Earth and Beyond

Students will:

Earth systems

- Appreciate that water, air, rocks and soil, and life forms make up our planet and recognise that these are also Earth's resources.

Physical World

Students will:

Physical inquiry and physics concepts

- Explore, describe, and represent patterns and trends for everyday examples of physical phenomena, such as movement, forces, electricity and magnetism, light, sound, waves, and heat. For example, identify and describe the effect of forces (contact and non-contact) on the motion of objects; identify and describe everyday examples of sources of energy, forms of energy, and energy transformations.

Material World

Students will:

Properties and changes of matter

- Group materials in different ways, based on the observations and measurements of the characteristic chemical and physical properties of a range of different materials.
- Compare chemical and physical changes.

Chemistry and society

- Relate the observed, characteristic chemical and physical properties of a range of different materials to technological uses and natural processes.

See separate chart Learning Languages

Evolution

- Begin to group plants, animals, and other living things into science-based classifications.
- Explore how the groups of living things we have in the world have changed over long periods of time and appreciate that some living things in New Zealand are quite different from living things in other areas of the world.

Level Three Social Sciences

Social Studies

Students will gain knowledge, skills, and experience to:

- Understand how groups make and implement rules and laws.
- Understand how cultural practices vary but reflect similar purposes.
- Understand how people view and use places differently.
- Understand how people make decisions about access to and use of resources.
- Understand how people remember and record the past in different ways.
- Understand how early Polynesian and British migrations to New Zealand have continuing significance for tangata whenua and communities.
- Understand how the movement of people affects cultural diversity and interaction in New Zealand.

Level Three Technology

Technological Practice

Students will:

Technological Knowledge

Students will:

Characteristics of technology

- Understand how society and environments impact on and are influenced by technological knowledge in historical and contemporary contexts and that technological knowledge is validated by successful function.

Nature of Technology

Students will:

Characteristics of technological outcomes

- Understand that technological outcomes are recognisable as fit for purpose by the relationship between their physical and functional natures.

Technological products

- Understand the relationship between the materials used and their performance properties in technological products.

Technological systems

- Understand that technological systems are represented by symbolic language tools and understand the role played by the "black box" in technological systems.

REPLACE REFER INSERT

Level Four English

Listening, Reading, and Viewing

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies confidently to identify, form, and express ideas.
- INDICATORS:**
 - selects and reads texts for enjoyment and personal fulfilment;
 - recognises and understands the connections between oral, written, and visual language;
 - integrates sources of information and prior knowledge confidently to make sense of increasingly varied and complex texts;
 - selects and uses appropriate processing and comprehension strategies with increasing understanding and confidence;
 - thinks critically about texts with increasing understanding and confidence;
 - monitors, self-evaluates, describes progress, and articulates learning with confidence.

By using these processes and strategies when listening, reading, or viewing, students will:

Purposes and audiences

- Show an increasing understanding of how texts are shaped for different purposes and audiences.
- INDICATORS:**
 - recognises and understands how texts are constructed for a range of purposes, audiences, and situations;
 - identifies particular points of view and recognises that texts can position a reader;
 - evaluates the reliability and usefulness of texts with increasing confidence.

Ideas

- Show an increasing understanding of ideas within, across, and beyond texts.
- INDICATORS:**
 - makes meaning of increasingly complex texts by identifying and understanding main and subsidiary ideas and the links between them;
 - makes connections by thinking about underlying ideas within and between texts from a range of contexts;
 - recognises that there may be more than one reading available within a text;
 - makes and supports inferences from texts with increasing independence.

Language features

- Show an increasing understanding of how language features are used for effect within and across texts.

INDICATORS:

- identifies oral, written, and visual features used and recognises and describes their effects;
- uses an increasing vocabulary to make meaning;
- shows an increasing knowledge of how a range of text conventions can be used appropriately and effectively;
- knows that authors have different voices and styles and can identify and describe some of these differences.

Structure

- Show an increasing understanding of text structures.

INDICATORS:

- understands that the order and organisation of words, sentences, paragraphs, and images contribute to and affect meaning in a range of texts;
- identifies an increasing range of text forms and recognises and describes their characteristics and conventions.

Speaking, Writing, and Presenting

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies confidently to identify, form, and express ideas.
- INDICATORS:**
 - uses an increasing understanding of the connections between oral, written, and visual language when creating texts;
 - creates a range of texts by integrating sources of information and processing strategies with increasing confidence;
 - seeks feedback and makes changes to texts to improve clarity, meaning, and effect;
 - is reflective about the production of own texts: monitors and self-evaluates progress, articulating learning with confidence.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show an increasing understanding of how to shape texts for different purposes and audiences.
- INDICATORS:**
 - constructs texts that show an awareness of purpose and audience through deliberate choice of content, language, and text form;
 - conveys and sustains personal voice where appropriate.

Ideas

- Select, develop, and communicate ideas on a range of topics.
- INDICATORS:**
 - forms and communicates ideas and information clearly, drawing on a range of sources;
 - adds or changes details and comments to support ideas, showing thoughtful selection in the process;
 - ideas show increasing awareness of a range of dimensions or viewpoints.

Language features

- Use a range of language features appropriately, showing an increasing understanding of their effects.
- INDICATORS:**
 - uses a range of oral, written, and visual features to create meaning and effect and to sustain interest;
 - uses a range of vocabulary to communicate precise meaning;
 - demonstrates a good understanding of spelling patterns in written English, with few intrusive errors;
 - uses a wide range of strategies to self-monitor and self-correct spelling;
 - writes with increasing speed and endurance to suit the nature of the task and its purpose, without significant loss of legibility;
 - uses a range of text conventions, including grammatical conventions, appropriately, effectively, and with increasing accuracy.

Structure

- Organise texts, using a range of appropriate structures.
- INDICATORS:**
 - achieves some coherence and wholeness when constructing texts;
 - organises and sequences ideas and information for a particular purpose or effect;
 - uses a variety of sentence structures, beginnings, and lengths for effect.

Level Four The Arts

Understanding the Arts in Context

Dance

Students will:

- Explore and describe how dance is used for different purposes in a variety of cultures and contexts.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show an increasing understanding of how to shape texts for different purposes and audiences.

INDICATORS:

- constructs texts that show an awareness of purpose and audience through deliberate choice of content, language, and text form;

Ideas

Music – Sound Arts

Students will:

- Identify and describe the characteristics of music associated with a range of sound environments, in relation to historical, social, and cultural contexts.
- Explore ideas about how music serves a variety of purposes and functions in their lives and in their communities.

Visual Arts

Students will:

- Investigate the purpose of objects and images from past and present cultures and identify the contexts in which they were or are made, viewed, and valued.

Developing Practical Knowledge

Drama

Students will:

- Apply the dance elements to extend personal movement skills and vocabularies and to explore the vocabularies of others.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show an increasing understanding of how to shape texts for different purposes and audiences.

INDICATORS:

- constructs texts that show an awareness of purpose and audience through deliberate choice of content, language, and text form;

Ideas

Music – Sound Arts

Students will:

- Apply knowledge of the elements of music, structural devices, and technologies through integrating aural, practical, and theoretical skills.

- Express, develop, and refine musical ideas, using the elements of music, instruments, and technologies in response to sources of motivation.

- Explore ideas about how music serves a variety of purposes and functions in their lives and in their communities.

Visual Arts

Students will:

- Explore and use art-making conventions, applying knowledge of elements and selected principles through the use of materials and processes.

Developing Ideas

Drama

Students will:

- Combine and contrast the dance elements to express images, ideas, and feelings in dance, using a variety of choreographic processes.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show an increasing understanding of how to shape texts for different purposes and audiences.

INDICATORS:

- constructs texts that show an awareness of purpose and audience through deliberate choice of content, language, and text form;

Ideas

Music – Sound Arts

Students will:

- Express, develop, and refine musical ideas, using the elements of music, instruments, and technologies in response to sources of motivation.

- Explore ideas about how music serves a variety of purposes and functions in their lives and in their communities.

Visual Arts

Students will:

- Develop and revisit visual ideas, in response to a variety of motivations, observation, and imagination, supported by the study of artists' works.

Communicating and Interpreting

Drama

Students will:

- Prepare and present dance, with an awareness of the performance context.
- Describe and record how the purpose of selected dances is expressed through the movement.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show an increasing understanding of how to shape texts for different purposes and audiences.

INDICATORS:

- constructs texts that show an awareness of purpose and audience through deliberate choice of content, language, and text form;

Ideas

Music – Sound Arts

Students will:

- Prepare, rehearse, and present performance of music, using performance skills and techniques.

- Reflect on the expressive qualities of their own and others' music, both live and recorded.

Visual Arts

Students will:

- Explore and describe ways in which meanings can be communicated and interpreted in their own and others' work.

Level Four Health and Physical Education

Personal Health and Physical Development

Students will:

Personal growth and development

Students will:

- Describe the characteristics of pubertal change and discuss positive adjustment strategies.

Positive attitudes

Students will:

- Demonstrate willingness to accept challenges, learn new skills and strategies, and extend their abilities in movement-related activities.

Safety management

Students will:

- Access and use information to make and action safe choices in a range of contexts.

Personal identity

Students will:

- Describe how social messages and stereotypes, including those in the media, can affect feelings of self-worth.

Challenges and social and cultural factors

Students will:

- Participate in and demonstrate an understanding of how social and cultural practices are expressed through movement.

Movement Concepts and Motor Skills

Students will:

Movement skills

Students will:

- Demonstrate consistency and control of movement in a range of situations.

Relationships

Students will:

- Identify the effects of changing situations, roles, and responsibilities on relationships and describe appropriate responses.

Identity, sensitivity, and respect

Students will:

- Recognise instances of discrimination and act responsibly to support their own rights and feelings and those of other people.

Community resources

Students will:

- Investigate and/or access a range of community resources that support well-being and evaluate the contribution made by each to the well-being of community members.

Rights, responsibilities, and laws; People and the environment

Students will:

- Specify individual responsibilities and take collective action for the care and safety of other people in their school and in the wider community.

Relationships with Other People

Students will:

Relationships

Students will:

- Investigate and describe lifestyle factors and media influences that contribute to the well-being of people in New Zealand.

Community resources

Students will:

- Investigate and/or access a range of community resources that support well-being and evaluate the contribution made by each to the well-being of community members.

Rights, responsibilities, and laws; People and the environment

Students will:

- Specify individual responsibilities and take collective action for the care and safety of other people in their school and in the wider community.

Key Competencies

Thinking

Using language, symbols, and texts

</

Level Four Mathematics and Statistics

In a range of meaningful contexts, students will be engaged in thinking mathematically and statistically. They will solve problems and model situations that require them to:

Number and Algebra

Number strategies and knowledge

- Use a range of multiplicative strategies when operating on whole numbers.
- Understand addition and subtraction of fractions, decimals, and integers.
- Find fractions, decimals, and percentages of amounts expressed as whole numbers, simple fractions, and decimals.
- Apply simple linear proportions, including ordering fractions.
- Know the equivalent decimal and percentage forms for everyday fractions.
- Know the relative size and place value structure of positive and negative integers and decimals to three places.

Equations and expressions

- Form and solve simple linear equations.

Patterns and relationships

- Generalise properties of multiplication and division with whole numbers.
- Use graphs, tables, and rules to describe linear relationships found in number and spatial patterns.

Geometry and Measurement

Measurement

- Use appropriate scales, devices, and metric units for length, area, volume and capacity, weight (mass), temperature, angle, and time.
- Convert between metric units, using whole numbers and commonly used decimals.
- Use side or edge lengths to find the perimeters and areas of rectangles, parallelograms, and triangles and the volumes of cuboids.
- Interpret and use scales, timetables, and charts.

Shape

- Identify classes of two- and three-dimensional shapes by their geometric properties.

Probability

- Relate three-dimensional models to two-dimensional representations, and vice versa.
- Investigate situations that involve elements of chance by comparing experimental distributions with expectations from models of the possible outcomes, acknowledging variation and independence.
- Use simple fractions and percentages to describe probabilities.

Position and orientation

- Communicate and interpret locations and directions, using compass directions, distances, and grid references.

Transformation

- Use the invariant properties of figures and objects under transformations (reflection, rotation, translation, or enlargement).

Statistics

Statistical investigation

- Plan and conduct investigations using the statistical enquiry cycle:
 - determining appropriate variables and data collection methods;
 - gathering, sorting, and displaying multivariate category, measurement, and time-series data to detect patterns, variations, relationships, and trends;
 - comparing distributions visually;
 - communicating findings, using appropriate displays.

Statistical literacy

- Evaluate statements made by others about the findings of statistical investigations and probability activities.

Level Four Science

Nature of Science

Students will:

Understanding about science

- Appreciate that science is a way of explaining the world and that science knowledge changes over time.
- Identify ways in which scientists work together and provide evidence to support their ideas.

Investigating in science

- Build on prior experiences, working together to share and examine their own and others' knowledge.
- Ask questions, find evidence, explore simple models, and carry out appropriate investigations to develop simple explanations.

Communicating in science

- Begin to use a range of scientific symbols, conventions, and vocabulary.
- Engage with a range of science texts and begin to question the purposes for which these texts are constructed.

Participating and contributing

- Use their growing science knowledge when considering issues of concern to them.
- Explore various aspects of an issue and make decisions about possible actions.

Living World

Students will:

Life processes

- Recognise that there are life processes common to all living things and that these occur in different ways.

Ecology

- Explain how living things are suited to their particular habitat and how they respond to environmental changes, both natural and human-induced.

Evolution

- Begin to group plants, animals, and other living things into science-based classifications.
- Explore how the groups of living things we have in the world have changed over long periods of time and appreciate that some living things in New Zealand are quite different from living things in other areas of the world.

Planet Earth and Beyond

Students will:

Earth systems

- Develop an understanding that water, air, rocks and soil, and life forms make up our planet and recognise that these are also Earth's resources.

Interacting systems

- Investigate the water cycle and its effect on climate, landforms, and life.

Astronomical systems

- Investigate the components of the solar system, developing an appreciation of the distances between them.

Physical World

Students will:

Physical inquiry and physics concepts

- Explore, describe, and represent patterns and trends for everyday examples of physical phenomena, such as movement, forces, electricity and magnetism, light, sound, waves, and heat. For example, identify and describe the effect of forces (contact and non-contact) on the motion of objects; identify and describe everyday examples of interacting systems.
- Compare chemical and physical changes.

The structure of matter

- Begin to develop an understanding of the particle nature of matter and use this to explain observed changes.

Chemistry and society

- Relate the observed, characteristic chemical and physical properties of a range of different materials to technological uses and natural processes.

Level Four Social Sciences

Social Studies

Students will gain knowledge, skills, and experience to:

- Understand how the ways in which leadership of groups is acquired and exercised have consequences for communities and societies.
- Understand how people pass on and sustain culture and heritage for different reasons and that this has consequences for people.
- Understand how exploration and innovation create opportunities and challenges for people, places, and environments.
- Understand that events have causes and effects.
- Understand how producers and consumers exercise their rights and meet their responsibilities.
- Understand how formal and informal groups make decisions that impact on communities.
- Understand how people participate individually and collectively in response to community challenges.

Level Four Technology

Technological Practice

Students will:

Planning for practice

- Undertake planning that includes reviewing the effectiveness of past actions and resourcing, exploring implications for future actions and accessing of resources, and consideration of stakeholder feedback to enable the development of an outcome.

Brief development

- Justify the nature of an intended outcome in relation to the need or opportunity. Describe the key attributes identified in stakeholder feedback, which will inform the development of an outcome and its evaluation.

Outcome development and evaluation

- Investigate a context to develop ideas for feasible outcomes. Undertake functional modelling that takes account of stakeholder feedback in order to select and develop the outcome that best addresses the key attributes. Incorporating stakeholder feedback, evaluate the outcome's fitness for purpose in terms of how well it addresses the need or opportunity.

Technological Knowledge

Students will:

Technological modelling

- Understand how different forms of functional modelling are used to explore possibilities and to justify decision making and how prototyping can be used to justify refinement of technological outcomes.

Technological products

- Understand that technological outcomes can be interpreted in terms of how they might be used and by whom and that each has a proper function as well as possible alternative functions.

Technological systems

- Understand how technological systems employ control to allow for the transformation of inputs to outputs.

Nature of Technology

Students will:

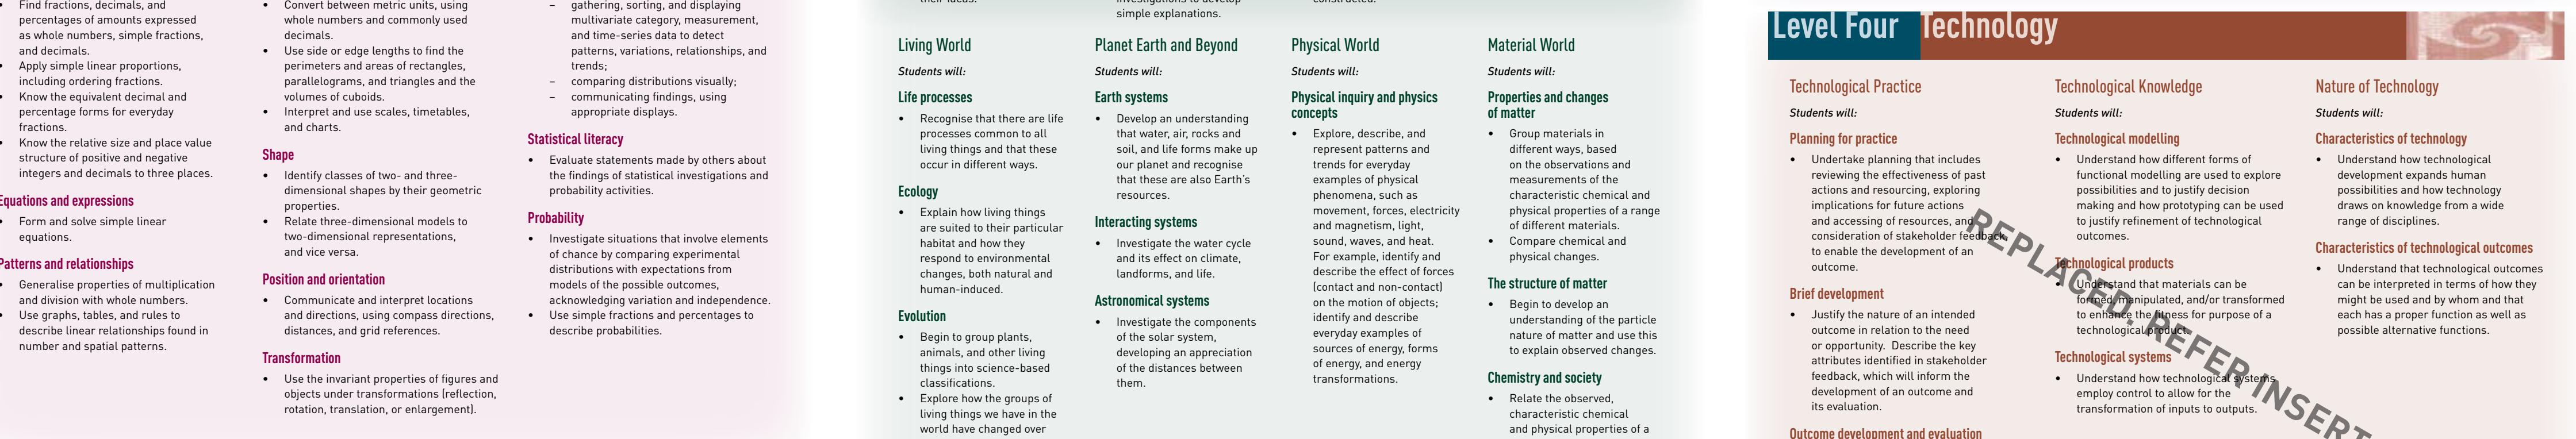

Characteristics of technology

- Understand how technological development expands human possibilities and how technology draws on knowledge from a wide range of disciplines.

Characteristics of technological outcomes

- Understand that technological outcomes can be interpreted in terms of how they might be used and by whom and that each has a proper function as well as possible alternative functions.

See separate chart Learning Languages

Level Five English

Listening, Reading, and Viewing

Processes and strategies

- Students will:**
- Integrate sources of information, processes, and strategies purposefully and confidently to identify, form, and express increasingly sophisticated ideas.

INDICATORS:

- selects and reads texts for enjoyment and personal fulfilment;
- recognises, understands, and considers the connections between oral, written, and visual language;
- integrates sources of information and prior knowledge purposefully and confidently to make sense of increasingly varied and complex texts;
- selects and uses appropriate processing and comprehension strategies with confidence;
- thinks critically about texts with understanding and confidence;
- monitors, self-evaluates, and describes progress, articulating learning with confidence.

By using these processes and strategies when listening, reading, or viewing, students will:

Purposes and audiences

- Show an understanding of how texts are shaped for different purposes and audiences.

INDICATORS:

- recognises, understands, and considers how texts are constructed for a range of purposes, audiences, and situations;
- identifies particular points of view within texts and recognises that texts can position a reader;
- evaluates the reliability and usefulness of texts with confidence.

Ideas

- Show an understanding of ideas within, across, and beyond texts.

INDICATORS:

- makes meaning by understanding increasingly comprehensive ideas in texts and the links between them;
- makes connections by exploring ideas within and between texts from a range of contexts;
- recognises that there may be more than one reading available within a text;
- makes and supports inferences from texts independently.

Language features

- Show an understanding of how language features are used for effect within and across texts.

INDICATORS:

- identifies oral, written, and visual language features and understands their effects;
- uses an increasing vocabulary to make meaning;
- understands how a range of text conventions work together to create meaning and effect;
- understands that authors have different voices and styles and can identify those differences.

Structure

- Show an understanding of a range of structures.

INDICATOR:

- identifies and understands the characteristics and conventions of a range of text forms and considers how they contribute to and affect text meaning.

Speaking, Writing, and Presenting

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies purposefully and confidently to identify, form, and express increasingly sophisticated ideas.

INDICATORS:

- uses an increasing understanding of the connections between oral, written, and visual language when creating texts;
- creates a range of increasingly varied and complex texts by integrating sources of information and processing strategies;
- seeks feedback and makes changes to texts to improve clarity, meaning, and effect;
- is reflective about the production of own texts: monitors and self-evaluates progress, articulating learning with confidence.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show an understanding of how to shape texts for different audiences and purposes.

INDICATORS:

- constructs a range of texts that demonstrate an understanding of purpose and audience through deliberate choice of content, language, and text form;
- conveys and sustains personal voice where appropriate.

Ideas

- Select, develop, and communicate purposeful ideas on a range of topics.

INDICATORS:

- develops and communicates increasingly comprehensive ideas, information, and understandings;
- develops ideas by adding details or making links to other ideas and details;
- ideas show an awareness of a range of dimensions or viewpoints.

Language features

- Select and use a range of language features appropriately, showing an understanding of their effects.

INDICATORS:

- uses a wide range of oral, written, and visual language features to create meaning and effect and to sustain interest;
- uses an increasing range of vocabulary to communicate precise meaning;
- uses a wide range of text conventions, including grammatical and spelling conventions, appropriately, effectively, and with increasing accuracy.

Structure

- Organise texts using a range of appropriate, effective structures.

INDICATORS:

- achieves a sense of coherence and wholeness when constructing texts;
- organises and develops ideas and information for a particular purpose or effect, using the characteristics and conventions of a range of text forms.

Level Five The Arts

Understanding the Arts in Context

Dance

Students will:

- Compare and contrast dances from a variety of past and present cultures and contexts.

Developing Practical Knowledge

Developing Ideas

Students will:

- Develop a variety of skills, dance techniques, vocabularies, and movement practices.

Communicating and Interpreting

Manipulate the elements and explore the use of choreographic devices and structures to organise dance movement.

Students will:

- Prepare, rehearse, and perform dance with an awareness of production technologies.
- Reflect on and describe how choreography communicates ideas, feelings, moods, and experiences.

Drama

Students will:

- Investigate the characteristics, purposes, and function of drama in a range of contexts.

Select and use techniques, conventions, and relevant technologies for specific drama purposes.

Students will:

- Select and refine ideas to develop drama for specific purposes.

Present and respond to drama and describe how drama combines elements, techniques, conventions, and technologies to create structure and meaning in their own and others' work.

Students will:

- Present and respond to drama and describe how drama combines elements, techniques, conventions, and technologies to create structure and meaning in their own and others' work.

Music – Sound Arts

Students will:

- Compare and contrast the characteristics of music associated with a range of sound environments, in relation to historical, social, and cultural contexts.

Use musical elements, instruments, technologies, and conventions to express, develop, and refine structured compositions and improvisations.

Students will:

- Investigate how music serves a variety of purposes and functions in their lives and in their communities.

Prepare, rehearse, and present performances of music, using a range of performance skills and techniques.

Students will:

- Reflect on the expressive qualities of their own and others' music, both live and recorded.

Visual Arts

Students will:

- Investigate and consider the relationship between the production of art works and their contexts and influences.

Apply knowledge of selected conventions from established practice, using appropriate processes and procedures.

Students will:

- Generate, develop, and refine ideas in response to a variety of motivations, including the study of established practice.

Compare and contrast the ways in which ideas and art-making processes are used to communicate meaning in selected objects and images.

Students will:

- Compare and contrast the ways in which ideas and art-making processes are used to communicate meaning in selected objects and images.

Level Five Health and Physical Education

Personal Health and Physical Development

Students will:

Personal growth and development

Students will:

- Acquire and apply complex motor skills by using basic principles of motor learning.

Positive attitudes

Students will:

- Develop skills and responsible attitudes in challenging physical situations.

Regular physical activity

Students will:

- Experience a range of personally enjoyable physical activities and describe how varying levels of involvement affect well-being and lifestyle balance.

Safety management

Students will:

- Investigate and practise safety procedures and strategies to manage risk situations.

Challenges and social and cultural factors

Students will:

- Investigate and describe the ways in which individuals define their own identity and sense of self-worth and how this influences the ways in which they describe other people.

Personal identity

Students will:

- Investigate and describe the ways in which people's physical competence and participation are influenced by social and cultural factors.

Movement Concepts and Motor Skills

Students will:

Movement skills

Students will:

- Describe physical, social, emotional, and intellectual processes of growth and relate these to features of adolescent development and effective self-management strategies.

Identity, sensitivity, and respect

Students will:

- Demonstrate an understanding of how attitudes and values relating to difference influence their own safety and that of other people.

Science and technology

Students will:

- Investigate and experience ways in which scientific, technological, and environmental knowledge and resources assist in and influence people's participation in regular physical activity.

Interpersonal skills

Students will:

- Demonstrate a range of interpersonal skills and processes that help them to make safe choices for themselves and other people in a variety of settings.

People and the environment

Students will:

- Investigate and evaluate aspects of the school environment that affect people's well-being and take action to enhance these aspects.

Relationships with Other People

Students will:

Relationships

Students will:

- Identify issues associated with relationships and describe options to achieve positive outcomes.

Healthy Communities and Environments

Students will:

Societal attitudes and values

Students will:

- Investigate societal influences on the well-being of student communities.

Community resources

Students will:

- Investigate community services that support and promote people's well-being and take action to promote personal and group involvement.

Rights, responsibilities, and laws

Students will:

- Identify the rights and responsibilities of consumers and use this information to evaluate health and recreational services and products in the community.

People and the environment

Students will:

- Investigate and evaluate aspects of the school environment that affect people's well-being and take action to enhance these aspects.

Key Competencies

Thinking

Using language, symbols, and texts

Relating to others

Managing self

Participating and contributing

Level Five Mathematics and Statistics

In a range of meaningful contexts, students will be engaged in thinking mathematically and statistically. They will solve problems and model situations that require them to:

Number and Algebra

Number strategies and knowledge

- Reason with linear proportions.
- Use prime numbers, common factors and multiples, and powers (including square roots).
- Understand operations on fractions, decimals, percentages, and integers.
- Use rates and ratios.
- Know commonly used fraction, decimal, and percentage conversions.
- Know and apply standard form, significant figures, rounding, and decimal place value.

Equations and expressions

- Form and solve linear and simple quadratic equations.

Patterns and relationships

- Generalise the properties of operations with fractional numbers and integers.
- Relate tables, graphs, and equations to linear and simple quadratic relationships found in number and spatial patterns.

Geometry and Measurement

Measurement

- Select and use appropriate metric units for length, area, volume and capacity, weight (mass), temperature, angle, and time, with awareness that measurements are approximate.
- Convert between metric units, using decimals.
- Deduce and use formulae to find the perimeters and areas of polygons and the volumes of prisms.
- Find the perimeters and areas of circles and composite shapes and the volumes of prisms, including cylinders.

Shape

- Deduce the angle properties of intersecting and parallel lines and the angle properties of polygons and apply these properties.
- Create accurate nets for simple polyhedra and connect three-dimensional solids with different two-dimensional representations.

Position and orientation

- Construct and describe simple loci.
- Interpret points and lines on co-ordinate planes, including scales and bearings on maps.

Transformation

- Define and use transformations and describe the invariant properties of figures and objects under these transformations.
- Apply trigonometric ratios and Pythagoras' theorem in two dimensions.

Statistics

Statistical investigation

- Plan and conduct surveys and experiments using the statistical enquiry cycle:
 - determining appropriate variables and measures;
 - considering sources of variation;
 - gathering and cleaning data;
 - using multiple displays, and re-categorising data to find patterns, variations, relationships, and trends in multivariate data sets;
 - comparing sample distributions visually, using measures of centre, spread, and proportion;
 - presenting a report of findings.

Statistical literacy

- Evaluate statistical investigations or probability activities undertaken by others, including data collection methods, choice of measures, and validity of findings.

Probability

- Compare and describe the variation between theoretical and experimental distributions in situations that involve elements of chance.
- Calculate probabilities, using fractions, percentages, and ratios.

Level Five Science

Nature of Science

Students will:

Understanding about science

- Understand that scientists' investigations are informed by current scientific theories and aim to collect evidence that will be interpreted through processes of logical argument.

Investigating in science

- Develop and carry out more complex investigations, including using models.
- Show an increasing awareness of the complexity of working scientifically, including recognition of multiple variables.
- Begin to evaluate the suitability of the investigative methods chosen.

Communicating in science

- Use a wider range of science vocabulary, symbols, and conventions.
- Apply their understandings of science to evaluate both popular and scientific texts (including visual and numerical literacy).

Level Five Social Sciences

Social Studies

Students will gain knowledge, skills, and experience to:

- Understand how systems of government in New Zealand operate and affect people's lives, and how they compare with another system.
- Understand how the Treaty of Waitangi is responded to differently by people in different times and places.
- Understand how cultural interaction impacts on cultures and societies.
- Understand that people move between places and how this has consequences for the people and the places.
- Understand how economic decisions impact on people, communities, and nations.
- Understand how people's management of resources impacts on environmental and social sustainability.
- Understand how the ideas and actions of people in the past have had a significant impact on people's lives.
- Understand how people seek and have sought economic growth through business, enterprise, and innovation.
- Understand how people define and seek human rights.

See separate chart Learning Languages

Level Five Technology

Technological Practice

Students will:

Planning for practice

- Analyse their own and others' planning practices to inform the selection and use of planning tools. Use these to support and justify planning decisions (including those relating to the development of design concepts and how prototyping can be used to justify ongoing refinement of outcomes).

Technological Knowledge

Students will:

Technological modelling

- Understand how evidence, reasoning, and decision making in functional modelling contribute to the development of design concepts and how prototyping can be used to justify ongoing refinement of outcomes.

Technological products

- Understand how materials are selected, based on desired performance criteria.

Technological systems

- Understand the properties of subsystems within technological systems.

Nature of Technology

Students will:

Characteristics of technology

- Understand how people's perceptions and acceptance of technology impact on technological developments and how and why technological knowledge becomes codified.

Characteristics of technological outcomes

- Understand that technological outcomes are fit for purpose in terms of time and context. Understand the concept of malfunction and how "failure" can inform future outcomes.

Brief development

• Justify the nature of an intended outcome in relation to the need or opportunity. Describe specifications that reflect key stakeholder feedback and that will inform the development of an outcome and its evaluation.

Outcome development and evaluation

- Analyse their own and others' outcomes to inform the development of ideas for feasible outcomes. Undertake ongoing functional modelling and evaluation that takes account of key stakeholder feedback and trialling in the physical and social environments. Use the information gained to select and develop the outcome that best addresses the specifications. Evaluate the final outcome's fitness for purpose against the brief.

Level Six English

Listening, Reading, and Viewing

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies purposefully and confidently to identify, form, and express increasingly sophisticated ideas.

INDICATORS:

- selects and reads texts for enjoyment and personal fulfilment;
- recognises, understands, and considers the connections between oral, written, and visual language;
- integrates sources of information and prior knowledge purposefully and confidently to make sense of increasingly varied and complex texts;
- selects and uses appropriate processing and comprehension strategies with confidence;
- thinks critically about texts with understanding and confidence;
- monitors, self-evaluates, and describes progress, articulating learning with confidence.

By using these processes and strategies when listening, reading, or viewing, students will:

Purposes and audiences

- Show a developed understanding of how texts are shaped for different purposes and audiences.

INDICATORS:

- recognises, understands, and considers how texts are constructed for a range of purposes, audiences, and situations;
- identifies particular points of view within texts and recognises that texts can position a reader;
- evaluates the reliability and usefulness of texts with confidence.

Ideas

- Show a developed understanding of ideas within, across, and beyond texts.

INDICATORS:

- makes meaning by understanding comprehensive ideas;
- makes connections by interpreting ideas within and between texts from a range of contexts;
- recognises that there may be more than one reading available within a text;
- makes and supports inferences from texts independently.

Language features

- Show a developed understanding of how language features are used for effect within and across texts.

INDICATORS:

- identifies a range of oral, written, and visual language features and understands their effects;
- uses an increasing vocabulary to make meaning;
- understands and interprets how text conventions work together to create meaning and effect;
- understands that authors have different voices and styles and identifies and can explain these differences.

Structure

- Show a developed understanding of a range of structures.

INDICATOR:

- identifies and understands the characteristics and conventions of a range of text forms and considers how they contribute to and affect text meaning.

Speaking, Writing, and Presenting

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies purposefully and confidently to identify, form, and express increasingly sophisticated ideas.

INDICATORS:

- uses an increasing understanding of the connections between oral, written, and visual language when creating texts;
- creates a range of increasingly varied and complex texts by integrating sources of information and processing strategies;
- seeks feedback and makes changes to texts to improve clarity, meaning, and effect;
- is reflective about the production of own texts: monitors and self-evaluates progress, articulating learning with confidence.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show a developed understanding of how to shape texts for different audiences and purposes.

INDICATORS:

- constructs a range of texts that demonstrate an understanding of purpose and audience through deliberate choice of content, language, and text form;
- conveys and sustains personal voice where appropriate.

Ideas

- Select, develop, and communicate connected ideas on a range of topics.

INDICATORS:

- develops and communicates comprehensive ideas, information, and understandings;
- works towards creating coherent, planned whole texts by adding details to ideas or making links to other ideas and details;
- ideas show an understanding and awareness of a range of dimensions or viewpoints.

Language features

- Select and use a range of language features appropriately for a variety of effects.

INDICATORS:

- uses a wide range of oral, written, and visual language features with control to create meaning and effect and to sustain interest;
- uses an increasing vocabulary to communicate precise meaning;
- uses a wide range of text conventions, including grammatical and spelling conventions, appropriately, effectively, and with accuracy.

Structure

- Organise texts, using a range of appropriate, effective structures.

INDICATOR:

- achieves a sense of coherence and wholeness when constructing texts;
- organises and develops ideas and information for a particular purpose or effect, using the characteristics and conventions of a range of text forms.

Level Six The Arts

Understanding the Arts in Context

Dance

Students will:

- Explore, investigate, and describe the features and backgrounds of a variety of dance genres and styles.

Drama

Students will:

- Investigate the forms and purposes of drama in different historical or contemporary contexts, including New Zealand drama.

Music – Sound Arts

Students will:

- Analyse music from a range of sound environments, styles, and genres, in relation to historical, social, and cultural contexts.
- Consider and reflect on the influence of music in their own music making and in their lives.

Visual Arts

Students will:

- Investigate and analyse the relationship between the production of art works and the contexts in which they are made, viewed, and valued.
- Consider and reflect on the contexts underlying their own and others' work.

Developing Practical Knowledge

Developing Ideas

Students will:

- Develop and demonstrate skills in selected dance genres and styles and technologies to develop and give form to dance ideas.

Select and use techniques, conventions, and technologies in a range of dramatic forms.

Students will:

- Research, evaluate, and refine ideas in a range of dramatic forms to develop drama.

Apply knowledge of expressive features, stylistic conventions, and technologies through an integration of aural perception and practical and theoretical skills and describe how they are used in a range of music.

Students will:

- Create, structure, refine, and represent compositions using the elements of music, instruments, technologies, and conventions to express imaginative thinking and personal understandings.
- Reflect on composition processes and presentation conventions.

Apply knowledge of a range of conventions from established practice, using appropriate processes and procedures.

Students will:

- Generate, develop, and clarify ideas, showing some understanding of established practice.
- Sequence and link ideas systematically as they solve problems in a body of work, using observation and invention with an appropriate selection of materials.

Communicating and Interpreting

Prepare, rehearse, and perform a range of dances and demonstrate an understanding of the performance requirements of the genres and contexts.

Students will:

- Prepare, rehearse, and respond to the ways that dance uses elements, devices, structures, performance skills, and production technologies to communicate images, themes, feelings, and moods.

Research, evaluate, and refine ideas in a range of dramatic forms to develop drama.

Students will:

- Perform and respond to drama and make critical judgments about how elements, techniques, conventions, and technologies are used to create form and meaning in their own and others' work.

Create, structure, refine, and represent compositions using the elements of music, instruments, technologies, and conventions to express imaginative thinking and personal understandings.

Students will:

- Prepare, rehearse, interpret, and present performances of music individually and collaboratively, using a range of performance skills and techniques.
- Reflect on the expressive qualities of music and evaluate their own and others' music, both live and recorded.

Generate, develop, and clarify ideas, showing some understanding of established practice.

Students will:

- Identify and analyse processes and procedures from established practice that influence ways of communicating meaning.
- Investigate, analyse, and evaluate ideas and interpret artists' intentions in art works.

Level Six Health and Physical Education

Personal Health and Physical Development

Students will:

Personal growth and development

Students will:

- Investigate and understand reasons for the choices people make that affect their well-being and explore and evaluate options and consequences.

Movement skills

Students will:

- Acquire, apply, and refine specialised motor skills by using the principles of motor skill learning.

Positive attitudes

Students will:

- Demonstrate and examine responsible attitudes in challenging physical situations.

Regular physical activity

Students will:

- Choose and maintain ongoing involvement in appropriate physical activities and examine factors influencing their participation.

Science and technology

Students will:

- Apply scientific and technological knowledge and resources to enhance physical abilities in a range of environments.

Safety management

Students will:

- Demonstrate understanding of responsible behaviours required to ensure that challenges and risks are managed safely in physical and social environments.

Challenges and social and cultural factors

Students will:

- Demonstrate understanding and affirmation of people's diverse social and cultural needs and practices when participating in physical activities.

Personal identity

Students will:

- Demonstrate an understanding of factors that contribute to personal identity and celebrate individuality and affirm diversity.

Movement Concepts and Motor Skills

Students will:

Relationships with Other People

Students will:

Relationships

Students will:

- Demonstrate an understanding of how individuals and groups affect relationships by influencing people's behaviour, beliefs, decisions, and sense of self-worth.

Community resources

Students will:

- Advocate for the development of services and facilities to meet identified needs in the school and the community.

Rights, responsibilities, and laws

Students will:

- Compare and contrast personal values and practices with policies, rules, and laws and investigate how the latter contribute to safety in the school and community.

People and the environment

Students will:

- Investigate the roles and the effectiveness of local, national, and international organisations that promote well-being and environmental care.

Key Competencies

Thinking

•

Using language, symbols, and texts

•

Relating to others

•

Participating and contributing

•

Level Six Mathematics and Statistics

In a range of meaningful contexts, students will be engaged in thinking mathematically and statistically. They will solve problems and model situations that require them to:

Number and Algebra

Number strategies and knowledge

- Apply direct and inverse relationships with linear proportions.
- Extend powers to include integers and fractions.
- Apply everyday compounding rates.
- Find optimal solutions, using numerical approaches.

Equations and expressions

- Form and solve linear equations and inequations, quadratic and simple exponential equations, and simultaneous equations with two unknowns.

Patterns and relationships

- Generalise the properties of operations with rational numbers, including the properties of exponents.
- Relate graphs, tables, and equations to linear, quadratic, and simple exponential relationships found in number and spatial patterns.
- Relate rate of change to the gradient of a graph.

Geometry and Measurement

Measurement

- Measure at a level of precision appropriate to the task.
- Apply the relationships between units in the metric system, including the units for measuring different attributes and derived measures.
- Calculate volumes, including prisms, pyramids, cones, and spheres, using formulae.

Shape

- Deduce and apply the angle properties related to circles.
- Recognise when shapes are similar and use proportional reasoning to find an unknown length.
- Use trigonometric ratios and Pythagoras' theorem in two and three dimensions.

Position and orientation

- Evaluate statistical reports in the media by relating the displays, statistics, processes, and probabilities used to the claims made.

Statistics

Statistical investigation

- Plan and conduct investigations using the statistical enquiry cycle:
 - justifying the variables and measures used;
 - managing sources of variation, including through the use of random sampling;
 - identifying and communicating features in context (trends, relationships between variables, and differences within and between distributions), using multiple displays;
 - making informal inferences about populations from sample data;
 - justifying findings, using displays and measures.

Statistical literacy

- Evaluate statistical reports in the media by relating the displays, statistics, processes, and probabilities used to the claims made.

Probability

- Investigate situations that involve elements of chance:
 - comparing discrete theoretical distributions and experimental distributions, appreciating the role of sample size;
 - calculating probabilities in discrete situations.

Transformation

See separate chart Learning Languages

Level Six Science

Nature of Science

Students will:

Understanding about science

- Understand that scientists' investigations are informed by current scientific theories and aim to collect evidence that will be interpreted through processes of logical argument.

Investigating in science

- Develop and carry out more complex investigations, including using models.
- Show an increasing awareness of the complexity of working scientifically, including recognition of multiple variables.
- Begin to evaluate the suitability of the investigative methods chosen.

Communicating in science

- Use a wider range of science vocabulary, symbols, and conventions.
- Apply their understandings of science to evaluate both popular and scientific texts (including visual and numerical literacy).

Participating and contributing

- Develop an understanding of socio-scientific issues by gathering relevant scientific information in order to draw evidence-based conclusions and to take action where appropriate.

Living World

Students will:

Life processes

- Relate key structural features and functions to the life processes of plants, animals, and micro-organisms and investigate environmental factors that affect these processes.

Planet Earth and Beyond

Students will:

Earth systems

- Investigate the external and internal processes that shape and change the surface features of New Zealand.

Physical World

Students will:

Physical inquiry and physics concepts

- Identify patterns and trends in the properties of a range of groups of substances, for example, acids and bases, metals, metal compounds, and hydrocarbons.
- Explore factors that affect chemical processes.

Material World

Students will:

Properties and changes of matter

- Distinguish between atoms, molecules, and ions (includes covalent and ionic bonding).
- Link atomic structure to the organisation of the periodic table.
- Use particle theory to explain factors that affect chemical processes.

Ecology

Students will:

Interacting systems

- Develop an understanding of how the geosphere, hydrosphere, atmosphere, and biosphere interact to cycle carbon around Earth.

Astronomical systems

- Investigate the interactions between the solar, lunar, and Earth cycles and the effect of these on Earth.

Evolution

- Explore patterns in the inheritance of genetically controlled characteristics.
- Explain the importance of variation within a changing environment.

Using physics

- Investigate how physics knowledge is used in a technological or biological application.

Chemistry and society

- Investigate how chemical knowledge is used in a technological application of chemistry.

Level Six Social Sciences

Students will gain knowledge, skills, and experience to:

Social Studies

- Understand how individuals, groups, and institutions work to promote social justice and human rights.
- Understand how cultures adapt and change and that this has consequences for society.
- Understand how people's perspectives on past events that are of significance to New Zealanders differ.

History

- Understand how the causes and consequences of past events that are of particular characteristics and how environments are shaped by processes that create spatial patterns.
- Understand how people interact with natural and cultural environments and that this interaction has consequences.

Geography

- Understand how, as a result of scarcity, consumers, producers, and government make choices that affect New Zealand society.
- Understand how the different sectors of the New Zealand economy are interdependent.

Economics

- Understand how, as a result of scarcity, consumers, producers, and government make choices that affect New Zealand society.
- Understand how the different sectors of the New Zealand economy are interdependent.

Level Six Technology

Technological Practice

Students will:

Planning for practice

- Critically analyse their own and others' past and current planning practices in order to make informed selection and effective use of planning tools. Use these to support and justify ongoing planning that will see the development of an outcome through to completion.

Brief development

- Justify the nature of an intended outcome in relation to the need or opportunity and justify specifications in terms of key stakeholder feedback and wider community considerations.

Outcome development and evaluation

- Critically analyse their own and others' outcomes to inform the development of ideas for feasible outcomes. Undertake ongoing experimentation and functional modelling, taking account of stakeholder feedback and trialling in the physical and social environments. Use the information gained to select, justify, and develop a final outcome. Evaluate this outcome's fitness for purpose against the brief and justify the evaluation, using feedback from stakeholders.

Technological Knowledge

Students will:

Technological modelling

- Understand the role and nature of evidence and reasoning when managing risk through technological modelling.

Technological products

- Understand how materials are formed, manipulated, and transformed in different ways, depending on their properties, and understand the role of material evaluation in determining suitability for use in product development.
- Understand the implications of subsystems for the design, development, and maintenance of technological systems.

Nature of Technology

Students will:

Characteristics of technology

- Understand the interdisciplinary nature of technology and the implications of this for maximising possibilities through collaborative practice.

Characteristics of technological outcomes

- Understand that some technological outcomes can be perceived as both product and system. Understand how these outcomes impact on other outcomes and practices and on people's views of themselves and possible futures.

Level Seven English

Listening, Reading, and Viewing

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies purposefully, confidently, and precisely to identify, form, and express increasingly sophisticated ideas.

INDICATORS:

- selects and reads texts for enjoyment and personal fulfilment;
- recognises, understands, and appreciates the connections between oral, written, and visual language;
- integrates sources of information and prior knowledge purposefully, confidently, and precisely to make sense of increasingly varied and complex texts;
- selects and uses appropriate processing and comprehension strategies with confidence and discrimination;
- thinks critically about texts with understanding and confidence;
- monitors, self-evaluates, and describes progress, articulating learning with confidence.

By using these processes and strategies when listening, reading, or viewing, students will:

Purposes and audiences

- Show a discriminating understanding of how texts are shaped for different purposes and audiences.

INDICATORS:

- recognises, understands, and appreciates how texts are constructed for a range of intentions and situations;
- identifies particular points of view within texts and understands that texts can position a reader;
- evaluates the reliability and usefulness of texts.

Ideas

- Show a discriminating understanding of ideas within, across, and beyond texts.

INDICATORS:

- makes meaning by understanding increasingly sophisticated ideas;
- makes connections by analysing ideas within and between texts from a range of contexts;
- understands that there may be multiple readings available within a text;
- makes and supports inferences from texts independently.

Language features

- Show a discriminating understanding of how language features are used for effect within and across texts.

INDICATORS:

- identifies a range of increasingly sophisticated oral, written, and visual language features and understands their effects;
- uses an increasing vocabulary to make meaning;
- understands and analyses how text conventions work together to create meaning and effect;
- understands that authors have different voices and styles and appreciates these differences.

Structure

- Show a discriminating understanding of a range of structures.

INDICATOR:

- identifies and understands the characteristics and conventions of a range of text forms and appreciates how they contribute to and affect text meaning.

Speaking, Writing, and Presenting

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies purposefully, confidently, and precisely to identify, form, and express increasingly sophisticated ideas.

INDICATORS:

- uses an increasing understanding of the connections between oral, written, and visual language when creating texts;
- creates a range of increasingly coherent, varied, and complex texts by integrating sources of information and processing strategies;
- seeks feedback and makes changes to texts to improve clarity, meaning, and effect;
- is reflective about the production of own texts: monitors and self-evaluates progress, articulating learning with confidence.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show a discriminating understanding of how to shape texts for different audiences and purposes.

INDICATORS:

- constructs a range of texts that demonstrate an understanding and appreciation of purpose and audience through deliberate choice of content, language, and text form;
- conveys and sustains personal voice where appropriate.

Ideas

- Select, develop, and communicate sustained ideas on a range of topics.

INDICATORS:

- develops, communicates, and sustains increasingly sophisticated ideas, information, and understandings;
- creates coherent, planned whole texts by adding details to ideas or making links to other ideas and details;
- ideas show depth of thought and awareness of a range of dimensions or viewpoints.

Language features

- Select and integrate a range of language features appropriately for a variety of effects.

INDICATORS:

- uses a wide range of oral, written, and visual language features fluently and with control to create meaning and effect and to sustain interest;
- uses an increasing vocabulary to communicate precise meaning;
- uses a wide range of text conventions, including grammatical and spelling conventions, appropriately, effectively, and with accuracy.

Structure

- Organise texts, using a range of appropriate, coherent, and effective structures.

INDICATOR:

- organises and develops ideas and information for a particular purpose or effect, using the characteristics and conventions of a range of text forms with control.

Level Seven The Arts

Understanding the Arts in Context

Dance

Students will:

- Investigate and evaluate the effects of individual, social, cultural, and technological influences on the development of a variety of dance genres and styles.

Drama

Students will:

- Research the purposes of production, performance, and technologies of drama in a range of contexts, including New Zealand drama.
- Explore how drama reflects our cultural diversity.

Music – Sound Arts

Students will:

- Research and analyse music from a range of sound environments, styles, and genres, in relation to historical, social, and cultural contexts, considering the impact on music making and production.
- Apply their understandings of the expressive qualities of music from a range of contexts to a consideration of their influence on their own music practices.

Visual Arts

Students will:

- Research and analyse the influences of contexts on the characteristics and production of art works.
- Research and analyse the influence of relevant contexts on their own work.

Developing Practical Knowledge

Developing Ideas

Students will:

- Extend skills in the vocabulary, practices, and technologies of selected dance genres and styles.
- Choreograph solo and group dance works, using choreographic processes, devices, structures, and technologies to communicate choreographic intentions.
- Generate, plan, and record choreographic ideas and processes.

Developing Ideas

Students will:

- Select and refine the use of techniques, conventions, and technologies in specific dramatic forms.

Music – Sound Arts

Students will:

- Apply knowledge of expressive features, stylistic conventions, and technologies through an integration of aural perception and practical and theoretical skills and analyse how they are used in a range of music.
- Create, structure, refine, and represent compositions and musical arrangements, using technical and musical skills and technologies to express imaginative thinking and personal understandings.

Visual Arts

Students will:

- Apply understanding from research into a range of established practice to extend skills for particular art-making purposes, using appropriate processes and procedures in selected fields.
- Extend skills, in a range of materials, techniques, and technologies.

Communicating and Interpreting

Communicating and Interpreting

Students will:

- Apply rehearsal and performance skills to a range of dances, using appropriate techniques and expression to communicate specific intentions.
- Analyse, explain, and discuss aspects of performance and choreography in a range of dance works.

Developing Ideas

Students will:

- Research, critically evaluate, and refine ideas to develop drama in specific dramatic forms.

Music – Sound Arts

Students will:

- Rehearse and perform works in a range of dramatic forms.
- Respond to and make critical judgments about rehearsal processes and performances.

Developing Ideas

Students will:

- Create, structure, refine, and represent compositions and musical arrangements, using technical and musical skills and technologies to express imaginative thinking and personal understandings.

Visual Arts

Students will:

- Prepare, rehearse, present, record, and evaluate sustained performances of music, individually and collaboratively, that demonstrate interpretive understandings.

Communicating and Interpreting

Students will:

- Reflect on and evaluate composition processes and presentation conventions.

Developing Ideas

Students will:

- Prepare, rehearse, present, record, and evaluate sustained performances of music, individually and collaboratively, that demonstrate interpretive understandings.

Communicating and Interpreting

Students will:

- Research and analyse how art works are constructed and presented to communicate meanings.

Developing Ideas

Students will:

- Use critical analysis to interpret and respond to art works.

Level Seven Health and Physical Education

Personal Health and Physical Development

Students will:

Personal growth and development

Students will:

- Assess their health needs and identify strategies to ensure personal well-being across their lifespan.

Regular physical activity

Students will:

- Plan, implement, and evaluate a physical activity programme and examine factors used to justify physical activity as a means of enhancing well-being.

Safety management

Students will:

- Analyse the difference between perceived and residual risks in physical and social environments and develop skills and behaviour for managing responsible action.

Challenges and social and cultural factors

Students will:

- Appraise, adapt, and use physical activities to ensure that specific social and cultural needs are met.

Personal identity

Students will:

- Critically evaluate societal attitudes, values, and expectations that affect people's awareness of their personal identity and sense of self-worth in a range of life situations.

Movement Concepts and Motor Skills

Students will:

Movement skills

Students will:

- Appraise specialised motor skills and adapt them to extend physical competence and recreational opportunities.

Positive attitudes

Students will:

- Adapt skills and appraise responsible attitudes in challenging physical situations and unfamiliar environments.

Science and technology

Students will:

- Apply relevant scientific, technological, and environmental knowledge and use appropriate resources to improve performance in a specialised physical activity.

Interpersonal skills

Students will:

- Evaluate information, make informed decisions, and use interpersonal skills effectively to manage conflict, competition, and change in relationships.

Relating to others

Students will:

- Participate in and contribute to a range of physical activities that promote personal well-being and social interaction.

Participating and contributing

Students will:

- Participate in and contribute to a range of physical activities that promote personal well-being and social interaction.

Relationships with Other People

Students will:

Relationships

Students will:

- Analyse the nature and benefits of meaningful interpersonal relationships.

Identity, sensitivity, and respect

Students will:

- Analysing the beliefs, attitudes, and practices that reinforce stereotypes and role expectations, identifying ways in which these shape people's choices at individual, group, and societal levels.

Community resources

Students will:

- Evaluate school and community initiatives that promote young people's well-being and develop an action plan to instigate or support these.

Rights, responsibilities, and laws

Students will:

People and the environment

Level Seven Mathematics and Statistics

In a range of meaningful contexts, students will be engaged in thinking mathematically and statistically. They will solve problems and model situations that require them to:

Mathematics

Patterns and relationships

- Apply co-ordinate geometry techniques to points and lines.
- Display the graphs of linear and non-linear functions and connect the structure of the functions with their graphs.
- Use arithmetic and geometric sequences and series.
- Apply trigonometric relationships, including the sine and cosine rules, in two and three dimensions.
- Choose appropriate networks to find optimal solutions.

Equations and expressions

- Manipulate rational, exponential, and logarithmic algebraic expressions.
- Form and use linear, quadratic, and simple trigonometric equations.
- Form and use pairs of simultaneous equations, one of which may be non-linear.

Calculus

- Sketch the graphs of functions and their gradient functions and describe the relationship between these graphs.
- Apply differentiation and anti-differentiation techniques to polynomials.

See separate chart Learning Languages

Level Seven Science

Nature of Science

Students will:

Understanding about science

- Carry out investigations of phenomena, using the statistical enquiry cycle:
 - conducting surveys that require random sampling techniques;
 - conducting experiments, and using existing data sets;
 - evaluating the choice of measures for variables and the sampling and data collection methods used;
 - using relevant contextual knowledge, exploratory data analysis, and statistical inference.
- Make inferences from surveys and experiments:
 - making informal predictions, interpolations, and extrapolations;
 - using sample statistics to make point estimates of population parameters;
 - recognising the effect of sample size on the variability of an estimate.

Living World

Students will:

Life processes

- Explore the diverse ways in which animals and plants carry out the life processes.

Ecology

- Explore ecological distribution patterns and explain possible causes for these patterns.

Evolution

- Understand that DNA and the environment interact in gene expression.

Ecology and evolution

- Explain how the interaction between ecological factors and natural selection leads to genetic changes within populations.

Investigating in science

- Develop and carry out investigations that extend their new ideas to current and historical scientific knowledge and to present their understanding of the relationship between investigations and scientific theories and models.

Planet Earth and Beyond

Students will:

Earth systems and interacting systems

- Develop an understanding of the causes of natural hazards and their interactions with human activity on Earth.

Astronomical systems

- Explain the nature and life cycles of different types of stars in terms of energy changes and time.

Using physics

- Use physics ideas to explain a technological or biological application of physics.

Chemistry and society

- Apply knowledge of chemistry to explain aspects of the natural world and how chemistry is used in society to meet needs, resolve issues, and develop new technologies.

Communicating in science

- Use accepted science knowledge, vocabulary, symbols, and conventions when evaluating accounts of the natural world and consider the wider implications of the methods of communication and/or representation employed.

Participating and contributing

- Use relevant information to develop a coherent understanding of socio-scientific issues that concern them, to identify possible responses at both personal and societal levels.

Physical World

Students will:

Physical inquiry and physics concepts

- Investigate physical phenomena (in the areas of mechanics, electricity, electromagnetism, light and waves, and atomic and nuclear physics) and produce qualitative and quantitative explanations for a variety of unfamiliar situations.

The structure of matter

- Relate properties of matter to structure and bonding.
- Develop an understanding of and use the fundamental concepts of chemistry (for example, equilibrium and thermochemical principles) to interpret observations.

Outcome development and evaluation

- Critically analyse their own and others' outcomes and evaluative practices to inform the development of ideas for feasible outcomes. Undertake a critical evaluation that is informed by ongoing experimentation and functional modelling, stakeholder feedback, and trialling in the physical and social environments. Use the information gained to select, justify, and develop an outcome. Evaluate this outcome's fitness for purpose against the brief. Justify the evaluation, using feedback from stakeholders and demonstrating a critical understanding of the issue.

Level Seven Social Sciences

Students will gain knowledge, skills, and experience to:

Social Studies

Students will:

History

- Understand how historical communities and nations meet their responsibilities and exercise their rights in local, national, and global contexts.
- Understand how conflicts can arise from different cultural beliefs and ideas and be addressed in different ways with differing outcomes.

Geography

- Understand how the processes that shape natural and cultural environments change over time, vary in scale and from place to place, and create spatial patterns.
- Understand how people's interpretations of events that are of significance to New Zealanders differ.

Economics

- Understand how economic concepts and models provide a means of analysing contemporary New Zealand issues.
- Understand how government policies and contemporary issues interact.

Level Seven Technology

Technological Practice

Students will:

Planning for practice

- Critically analyse their own and others' past and current planning and management practices in order to develop and employ project management practices that will ensure the effective development of an outcome to completion.

Brief development

- Justify the nature of an intended outcome in relation to the issue to be resolved and justify specifications in terms of key stakeholder feedback and wider community considerations.

Technological Knowledge

Students will:

Technological modelling

- Understand how the "should" and "could" decisions in technological modelling rely on an understanding of how evidence can change in value across contexts and how different tools are used to ascertain and mitigate risk.

Technological products

- Understand the concepts and processes employed in materials evaluation and the implications of these for design, development, maintenance, and disposal of technological products.

Nature of Technology

Students will:

Characteristics of technology

- Understand the implications of ongoing contestation and competing priorities for complex and innovative decision making in technological development.

Characteristics of technological outcomes

- Understand that technological outcomes are a resolution of form and function priorities and that malfunction affects how people view and accept outcomes.

Technological systems

- Understand the concepts of redundancy and reliability and their implications for the design, development, and maintenance of technological systems.

REPLACED-REFUSED-INSERT

Level Eight English

Listening, Reading, and Viewing

Processes and strategies

- Students will:**
- Integrate sources of information, processes, and strategies purposefully, confidently, and precisely to identify, form, and express increasingly sophisticated ideas.

INDICATORS:

- selects and reads texts for enjoyment and personal fulfilment;
- recognises, understands, and appreciates the connections between oral, written, and visual language;
- integrates sources of information and prior knowledge purposefully, confidently, and precisely to make sense of increasingly varied and complex texts;
- selects and uses appropriate processing and comprehension strategies with confidence and discrimination;
- thinks critically about texts with understanding and confidence;
- monitors, self-evaluates, and describes progress, articulating learning with confidence.

By using these processes and strategies when listening, reading, or viewing, students will:

Purposes and audiences

- Show a discriminating understanding of how texts are shaped for different purposes and audiences.

INDICATORS:

- recognises, understands, and appreciates how texts are constructed for a range of intentions and situations;
- identifies particular points of view within texts and understands that texts can position a reader;
- evaluates the reliability and usefulness of texts.

Ideas

- Show a discriminating and insightful understanding of ideas within, across, and beyond texts.

INDICATORS:

- makes meaning by perceptively understanding sophisticated ideas;
- makes connections by analysing, evaluating, and synthesising ideas within and between texts from a range of contexts;
- understands that there may be multiple readings available within a text;
- makes and supports inferences from texts independently.

Language features

- Show a discriminating and insightful understanding of how language features are used for effect within and across texts.

INDICATORS:

- identifies a range of sophisticated oral, written, and visual language features and understands their effects;
- uses an increasing vocabulary to make meaning;
- understands, analyses, and evaluates how text conventions work together to create meaning and effect;
- understands that authors have different voices and styles and appreciates these differences.

Structure

- Show a discriminating understanding of a range of structures.

INDICATOR:

- identifies and understands the characteristics and conventions of a range of text forms and appreciates how they contribute to and affect text meaning.

Speaking, Writing, and Presenting

Processes and strategies

Students will:

- Integrate sources of information, processes, and strategies purposefully, confidently, and precisely to identify, form, and express increasingly sophisticated ideas.

INDICATORS:

- uses an increasing understanding of the connections between oral, written, and visual language when creating texts;
- creates a range of increasingly coherent, varied, and complex texts by integrating sources of information and processing strategies;
- seeks feedback and makes changes to texts to improve clarity, meaning, and effect;
- is reflective about the production of own texts: monitors and self-evaluates progress, articulating learning with confidence.

By using these processes and strategies when speaking, writing, or presenting, students will:

Purposes and audiences

- Show a discriminating understanding of how to shape texts for different purposes and audiences.

INDICATORS:

- constructs a range of texts that demonstrate an understanding and appreciation of purpose and audience through deliberate choice of content, language, and text form;
- conveys and sustains personal voice where appropriate.

Ideas

- Select, develop, and communicate sustained and insightful ideas on a range of topics.

INDICATORS:

- develops, communicates, and sustains sophisticated ideas, information, and understandings;
- creates coherent, planned whole texts by adding details to ideas or making links to other ideas and details;
- ideas show perception, depth of thought, and awareness of a range of dimensions or viewpoints.

Language features

- Select, integrate, and sustain the use of a range of language features appropriately for a variety of effects.

INDICATORS:

- uses a wide range of oral, written, and visual language features coherently, fluently, and with control to create meaning and command attention;
- uses an increasing vocabulary to communicate precise meaning;
- uses a wide range of text conventions, including grammatical and spelling conventions, appropriately, effectively, and with accuracy.

Structure

- Organise texts, using a range of appropriate, coherent, and effective structures.

INDICATOR:

- organises and develops ideas and information for a particular purpose or effect, using the characteristics and conventions of a range of text forms with control.

Level Eight The Arts

Understanding the Arts in Context

Dance

Students will:

- Investigate, analyse, and discuss the features, history, issues, and development of dance in New Zealand, including the contribution of selected individuals and groups.

Drama

Students will:

- Research, analyse, and critically evaluate how drama, including New Zealand drama, interprets, records, or challenges social and cultural discourse.

Music – Sound Arts

Students will:

- Research, analyse, and evaluate the production and presentation of music works from historical, social, and cultural contexts.
- Apply their understandings of the expressive qualities of music from a range of contexts to analyse its impact on their own music practices.

Visual Arts

Students will:

- Use research and analysis to investigate contexts, meanings, intentions, and technological influences related to the making and valuing of art works.
- Research and analyse contexts relevant to their intentions and to the expression of meanings in their own work.

Developing Practical Knowledge

Dance

Students will:

- Extend and refine skills, practices, and use of technologies in a range of dance genres and styles.

Drama

Students will:

- Research, analyse, and integrate elements, techniques, conventions, and technologies in dramatic forms for specific purposes.

Music – Sound Arts

Students will:

- Analyse, apply, and evaluate significant expressive features and stylistic conventions and technologies in a range of music, using aural perception and practical and theoretical skills.

Visual Arts

Students will:

- Apply understanding from broad and deep research into the characteristics and constraints of materials, techniques, technologies, and established conventions in a selected field.
- Extend and refine skills in a selected field, using appropriate processes and procedures.

Developing Ideas

Dance

Students will:

- Develop a concept and produce original dance works, using appropriate production technologies to communicate choreographic intentions.
- Record and critically reflect on the development and resolution of dance ideas.

Drama

Students will:

- Research, critically evaluate, and refine ideas to create original drama work.

Music – Sound Arts

Students will:

- Create, structure, refine, and represent compositions and musical arrangements, using secure technical and musical skills and technologies to express imaginative thinking and personal understandings.
- Reflect on and evaluate composition processes and presentation conventions.

Visual Arts

Students will:

- Plan, rehearse, present, record, evaluate, and refine performances of music, individually and collaboratively, demonstrating interpretive understandings.
- Critically analyse and evaluate the expressive qualities of music and production processes in order to refine interpretations of music.

Communicating and Interpreting

Dance

Students will:

- Select and apply rehearsal processes, performance skills, and production technologies to enhance the communication and expression of dance works.
- Critically analyse, interpret, and evaluate the artistic features and the communication of ideas in a range of dance works.

Drama

Students will:

- Analyse, rehearse, and perform works in a range of dramatic forms, assuming a variety of artistic or technical responsibilities.
- Reflect on and critically evaluate a wide range of works and performances.

Music – Sound Arts

Students will:

- Create, structure, refine, and represent compositions and musical arrangements, using secure technical and musical skills and technologies to express imaginative thinking and personal understandings.
- Reflect on and evaluate composition processes and presentation conventions.

Visual Arts

Students will:

- Generate, analyse, clarify, and regenerate options in response to selected questions or a proposal in a chosen field.
- Use a systematic approach, selectively informed by recent and established practice, to develop ideas in a body of work.

Level Eight Health and Physical Education

Personal Health and Physical Development

Students will:

- Critically evaluate a range of qualitative and quantitative data to devise strategies to meet their current and future needs for well-being.

Positive attitudes

- Devise, apply, and appraise strategies through which they and other people can participate responsibly in challenging physical situations intended to meet their current well-being needs.

Regular physical activity

- Critically examine commercial products and programmes that promote physical activity and relate this to personal participation in programmes intended to meet their current well-being needs.

Safety management

Students will:

- Critically analyse dilemmas and contemporary ethical issues that influence their own health and safety and that of other people.

Personal identity

Students will:

- Critically analyse the impacts that conceptions of personal, cultural, and national identity have on people's well-being.

Challenges and social and cultural factors

Students will:

- Devise and apply strategies to ensure that social and cultural needs are met in personal and group physical activities.

Movement Concepts and Motor Skills

Students will:

Movement skills

- Devise, apply, and evaluate strategies to improve physical activity performance for themselves and others.

Relationships

Relationships

- Critically analyse the dynamics of effective relationships in a range of social contexts.

Identity, sensitivity, and respect

Identity, sensitivity, and respect

- Critically analyse attitudes, values, and behaviours that contribute to conflict and identify and describe ways of creating more harmonious relationships.

Community resources

Community resources

- Establish and justify priorities for equitable distribution of available health and recreational resources and advocate change where necessary.

Rights, responsibilities, and laws

Rights, responsibilities, and laws

- Demonstrate the use of health promotion strategies by implementing a plan of action to enhance the well-being of the school, community, or environment.

People and the environment

People and the environment

- Critically analyse the interrelationships between people, industry, technology, and legislation on aspects of environmental health.

Key Competencies

Thinking

Thinking

Relating to others

Relating to others

Using language, symbols, and texts

Using language, symbols, and texts

Participating and contributing

Participating and contributing

Level Eight Mathematics and Statistics

In a range of meaningful contexts, students will be engaged in thinking mathematically and statistically. They will solve problems and model situations that require them to:

Mathematics

Patterns and relationships

- Apply the geometry of conic sections.
- Display and interpret the graphs of functions with the graphs of their inverse and/or reciprocal functions.
- Use permutations and combinations.
- Use curve fitting, log modelling, and linear programming techniques.
- Develop network diagrams to find optimal solutions, including critical paths.

Equations and expressions

- Manipulate trigonometric expressions.
- Form and use trigonometric, polynomial, and other non-linear equations.
- Form and use systems of simultaneous equations, including three linear equations and three variables, and interpret the solutions in context.
- Manipulate complex numbers and present them graphically.

Calculus

- Identify discontinuities and limits of functions.
- Choose and apply a variety of differentiation, integration, and anti-differentiation techniques to functions and relations, using both analytical and numerical methods.
- Form differential equations and interpret the solutions.

See separate chart Learning Languages

Statistics

Statistical investigation

- Carry out investigations of phenomena, using the statistical enquiry cycle:
 - conducting experiments using experimental design principles;
 - conducting surveys, and using existing data sets;
 - finding, using, and assessing appropriate models (including linear regression for bivariate data and additive models for time-series data), seeking explanations, and making predictions;
 - using informed contextual knowledge, exploratory data analysis, and statistical inference;
 - communicating findings and evaluating all stages of the cycle.
- Make inferences from surveys and experiments:
 - determining estimates and confidence intervals for means, proportions, and differences, recognising the relevance of the central limit theorem;
 - using methods such as resampling or randomisation to assess the strength of evidence.

Statistical literacy

- Evaluate a wide range of statistically based reports, including surveys and polls, experiments, and observational studies:
 - critiquing causal-relationship claims;
 - interpreting margins of error.

Probability

- Investigate situations that involve elements of chance:
 - calculating probabilities of independent, combined, and conditional events;
 - calculating and interpreting expected values and standard deviations of discrete random variables;
 - applying distributions such as the Poisson, binomial, and normal.

Level Eight Science

Nature of Science

Students will:

Understanding about science

- Understand that scientists have an obligation to connect their new ideas to current and historical scientific knowledge and to present their findings for peer review and debate.

Investigating in science

- Develop and carry out investigations that extend their science knowledge, including developing their understanding of the relationship between investigations and scientific theories and models.

Communicating in science

- Use accepted science knowledge, vocabulary, symbols, and conventions when evaluating accounts of the natural world and consider the wider implications of the methods of communication and/or representation employed.
- Use relevant information to develop a coherent understanding of socio-scientific issues that concern them, to identify possible responses at both personal and societal levels.

Participating and contributing

- Understand how ideologies shape society and that individuals and groups respond differently to these beliefs.

Living World

Students will:

Life processes, ecology, and evolution

- Understand the relationship between organisms and their environment.
- Explore the evolutionary processes that have resulted in the diversity of life on Earth and appreciate the place and impact of humans within these processes.

Planet Earth and Beyond

Students will:

Earth systems and interacting systems

- Develop an in-depth understanding of the interrelationship between human activities and the geosphere, hydrosphere, atmosphere, and biosphere over time.

Physical World

Students will:

Physical inquiry and physics concepts

- Investigate physical phenomena (in the areas of mechanics, electricity, electromagnetism, light and waves, and atomic and nuclear physics) and produce qualitative and quantitative explanations for a variety of complex situations.

The structure of matter

- Relate properties of matter to structure and bonding.
- Develop an understanding of and use the fundamental concepts of chemistry (for example, equilibrium and thermochemical principles) to interpret observations.

Using physics

- Use physics ideas to explain a technological, biological, or astronomical application of physics and discuss related issues.

Chemistry and society

- Apply knowledge of chemistry to explain aspects of the natural world and how chemistry is used in society to meet needs, resolve issues, and develop new technologies.

Level Eight Social Sciences

Students will gain knowledge, skills, and experience to:

Social Studies

History

- Understand how policy changes are influenced by and impact on the rights, roles, and responsibilities of individuals and communities.
- Understand how ideologies shape society and that individuals and groups respond differently to these beliefs.
- Understand how trends over time reflect social, economic, and political forces.

Geography

- Understand how interacting processes shape natural and cultural environments, occur at different rates and on different scales, and create spatial variations.
- Understand how people's diverse values and perceptions influence the environmental, social, and economic decisions and responses that they make.

Economics

- Understand that well-functioning markets are efficient but that governments may need to intervene where markets fail to deliver efficient or equitable outcomes.
- Understand how the nature and size of the New Zealand economy is influenced by interacting internal and external factors.

Level Eight Technology

Technological Practice

Students will:

Planning for practice

- Critically analyse their own and others' past and current planning and management practices in order to develop and employ project management practices that will ensure the efficient development of an outcome to completion.

Brief development

- Justify the nature of an intended outcome in relation to the context and the issue to be resolved. Justify specifications in terms of key stakeholder feedback and wider community considerations.

Outcome development and evaluation

- Critically analyse their own and others' outcomes and fitness-for-purpose determinations in order to inform the development of ideas for feasible outcomes. Undertake a critical evaluation that is informed by ongoing experimentation and functional modelling, stakeholder feedback, trialling in the physical and social environments, and an understanding of the issue as it relates to the wider context. Use the information gained to select, justify, and develop an outcome. Evaluate this outcome's fitness for purpose against the brief. Justify the evaluation, using feedback from stakeholders and demonstrating a critical understanding of the issue that takes account of all contextual dimensions.

Technological Knowledge

Students will:

Technological modelling

- Understand the role of technological modelling as a key part of technological development, justifying its importance on moral, ethical, sustainable, cultural, political, economic, and historical grounds.

Technological products

- Understand the concepts and processes employed in materials development and evaluation and the implications of these for design, development, maintenance, and disposal of technological products.

Technological systems

- Understand operational parameters and their role in the design, development, and maintenance of technological systems.

Nature of Technology

Students will:

Characteristics of technology

- Understand the implications of technology as intervention by design and how interventions have consequences, known and unknown, intended and unintended.

Characteristics of technological outcomes

- Understand how technological outcomes can be interpreted and justified as fit for purpose in their historical, cultural, social, and geographical locations.

Levels One and Two Learning Languages

Proficiency Descriptor

Students can understand and use familiar expressions and everyday vocabulary. Students can interact in a simple way in supported situations. (Adapted from *Common European Framework for Languages*, Global Scale Level A1: Basic User; Council of Europe, 2001.)

Communication

In selected linguistic and sociocultural contexts, students will:

Selecting and using language, symbols, and texts to communicate

- Receive and produce information.

Managing self and relating to others

- Produce and respond to questions and requests.

Participating and contributing in communities

- Show social awareness when interacting with others.

Language Knowledge

Students will:

- Recognise that the target language is organised in particular ways.
- Make connections with their own language(s).

Cultural Knowledge

Students will:

- Recognise that the target culture(s) is (are) organised in particular ways.
- Make connections with known culture(s).

Levels Three and Four Learning Languages

Proficiency Descriptor

Students can understand and construct simple texts using their knowledge of the target language. Students can describe aspects of their own background and immediate environment. (Adapted from *Common European Framework for Languages*, Global Scale Level A1: Basic User; Council of Europe, 2001.)

Communication

In selected linguistic and sociocultural contexts, students will:

Selecting and using language, symbols, and texts to communicate

- Understand and produce information and ideas.

Managing self and relating to others

- Express and respond to personal needs and interests.

Participating and contributing in communities

- Use cultural knowledge to communicate appropriately.

Language Knowledge

Students will:

- Recognise and describe ways in which the target language is organised.
- Compare and contrast languages.

Cultural Knowledge

Students will:

- Recognise and describe ways in which the target culture(s) is (are) organised.
- Compare and contrast cultural practices.

Key Competencies

• Thinking

• Using language, symbols, and texts

• Managing self

• Relating to others

• Participating and contributing

Levels Five and Six Learning Languages

Proficiency Descriptor

Students can understand and produce more complex language. They can communicate beyond the immediate context, for example, past and future events. Students can understand and produce a variety of text types. (Adapted from *Common European Framework for Languages*, Global Scale Level A2: Strong Waystage Performance; Council of Europe, 2001.)

Communication

In selected linguistic and sociocultural contexts, students will:

Selecting and using language, symbols, and texts to communicate

- Communicate information, ideas, and opinions through different text types.

Managing self and relating to others

- Express and respond to personal ideas and opinions.

Participating and contributing in communities

- Communicate appropriately in different situations.

Language Knowledge

Students will:

- Understand ways in which the target language is organised for different purposes.

Cultural Knowledge

Students will:

- Understand ways in which the target culture(s) is (are) organised for different purposes.

Levels Seven and Eight Learning Languages

Proficiency Descriptor

Students can use language variably and effectively to express and justify their own ideas and opinions, and support or challenge those of others. They are able to use and identify the linguistic and cultural forms that guide interpretation and enable them to respond critically to texts. (Adapted from *Common European Framework for Languages*, Global Scale Level B1: Independent User; Council of Europe, 2001.)

Communication

In selected linguistic and sociocultural contexts, students will:

Selecting and using language, symbols, and texts to communicate

- Communicate information, ideas, and opinions through increasingly complex and varied texts.

Managing self and relating to others

- Explore the views of others, developing and sharing personal perspectives.

Participating and contributing in communities

- Engage in sustained interaction and produce extended text.

Language Knowledge

Students will:

- Analyse ways in which the target language is organised in different texts and for different purposes.
- Explore how linguistic meaning is conveyed across languages.

Cultural Knowledge

Students will:

- Analyse ways in which the target culture(s) is (are) organised for different purposes and for different audiences.
- Analyse how the use of the target language expresses cultural meanings.

Glossary

Hauora (page 22)

In health and physical education, the use of the word hauora is based on Mason Durie's Te Whare Tapa Whā model (Durie, 1994). Hauora and well-being, though not synonyms, share much common ground. Taha wairua relates to spiritual well-being; taha hinengaro to mental and emotional well-being; taha tinana to physical well-being; and taha whānau to social well-being.

Whakataukī

Te Reo Māori (page 14)

Ko te reo te manawa pou o te Māori,
Ko te ihi te waimanawa o te tangata,
Ko te roimata, ko te hūpē te waiaroha.

Language is the lifeblood of Māori,
The life force and the sacred energy of man.
Tears and mucus are the spiritual expressions of feelings.

Ko tōku nui, tōku wehi, tōku whakatiketike, tōku reo.

My language is my greatness, my inspiration,
that which I hold precious.

Ko te reo Māori te kākahu o te whakaaro,
te huarahi i te ao tūroa.

The Māori language is the cloak of thought
and the pathway to this natural world.

Ko te manu e kai ana i te miro, nōna te ngahere.
Ko te manu e kai ana i te mātauranga, nōna te ao.

The bird that partakes of the miro berry reigns in the forest.
The bird that partakes of the power of knowledge has access to the world.

Ko te reo te mauri o te mana Māori.

Language is the life force of Māori.

English (page 18)

Ko te reo te tuakiri
Ko te reo tōku ahurei
Ko te reo te ora.

Language is my identity.
Language is my uniqueness.
Language is life.

The Arts (page 20)

Te toi whakairo, ka ihiihi, ka wehiwehi, ka aweawe te ao katoa.

Artistic excellence makes the world sit up in wonder.

Health and Physical Education (page 22)

He oranga ngākau, he pikinga waiora.

Positive feelings in your heart will enhance your sense of self-worth.

Learning Languages (page 24)

Ko tōu reo, ko tōku reo,
te tuakiri tangata.
Tīhei uriuri, tīhei nakonako.

Your voice and my voice are expressions of identity.
May our descendants live on and our hopes be fulfilled.

Mathematics and Statistics (page 26)

Kei hopu tōu ringa ki te aka tāepa,
engari kia mau ki te aka matua.

Cling to the main vine, not the loose one.

Science (page 28)

Mā te whakaaro nui e hanga te whare;
mā te mātauranga e whakaū.

Big ideas create the house;
knowledge maintains it.

Social Sciences (page 30)

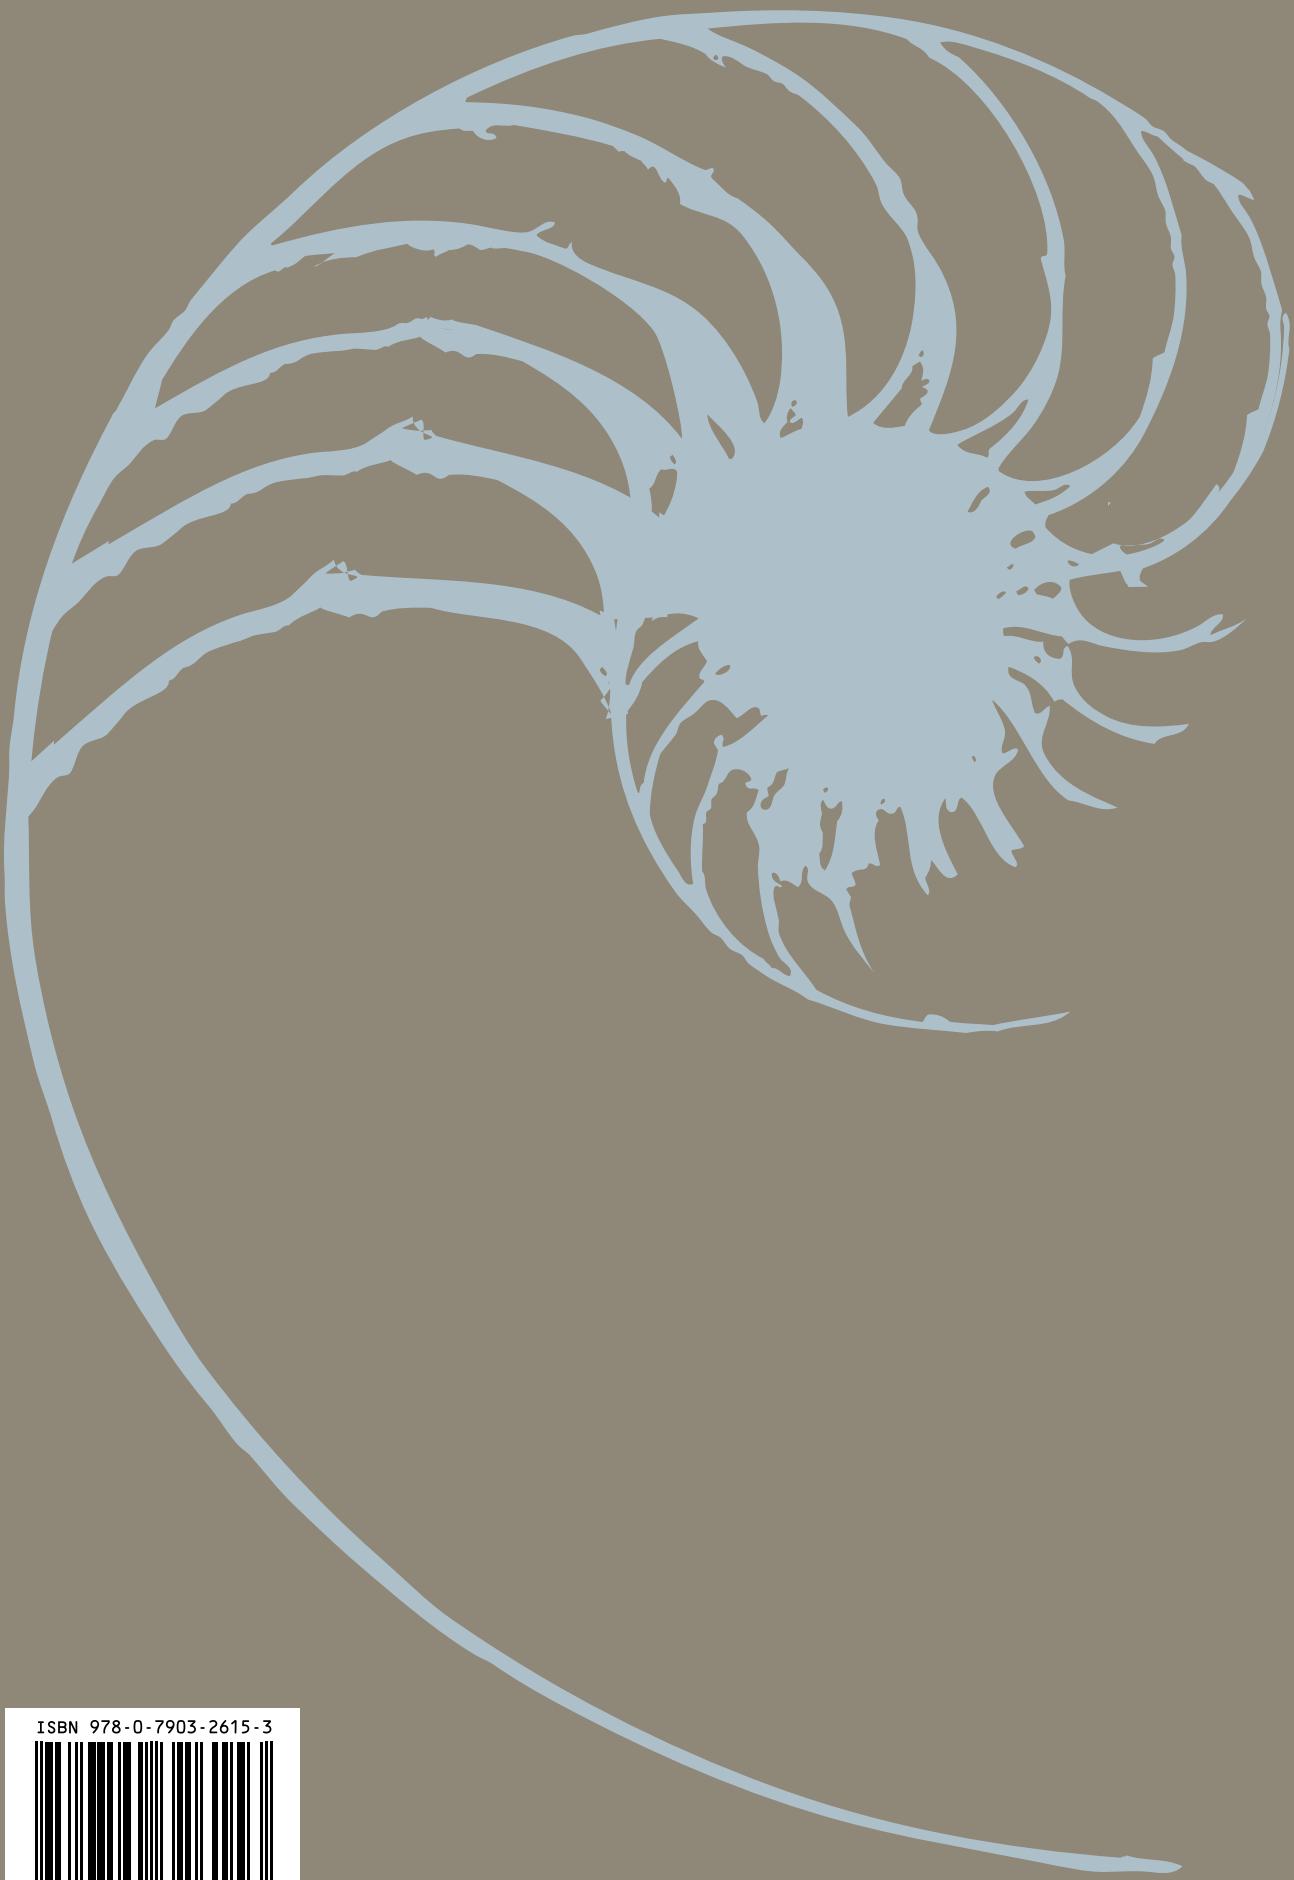

Unuhia te rito o te harakeke kei whea te kōmako e kō?
Whakatairangitia – rere ki uta, rere ki tai;
Ui mai koe ki ahau he aha te mea nui o te ao,
Māku e kī atu he tangata, he tangata, he tangata!

Remove the heart of the flax bush and where will the kōmako sing?
Proclaim it to the land, proclaim it to the sea;
Ask me, "What is the greatest thing in the world?"
I will reply, "It is people, people, people!"

Technology (page 32)

Kua e rangiruatia te hāpai o te hoe;
e kore tō tātou waka e ū ki uta.

Don't paddle out of unison;
our canoe will never reach the shore.

New Zealand Government

Technology in the New Zealand Curriculum

We've revised the Technology learning area to strengthen the positioning of digital technologies in the New Zealand Curriculum. The goal of this change is to ensure that all learners have the opportunity to become digitally capable individuals. This change signals the need for greater focus on our students building their skills so they can be innovative creators of digital solutions, moving beyond solely being users and consumers of digital technologies.

Schools will be expected to fully integrate the revised learning area into their curriculum by the start of the 2020 school year.

What is technology about?

*Kaua e rangiruatia te hāpai o te hoe;
e kore tō tātou waka e ū ki uta.*

Technology is intervention by design. It uses intellectual and practical resources to create technological outcomes, which expand human possibilities by addressing needs and realising opportunities.

Design is characterised by innovation and adaptation and is at the heart of technological practice. It is informed by critical and creative thinking and specific design processes. Effective and ethical design respects the unique relationship that New Zealanders have with their physical environment and embraces the significance of Māori culture and world views in its practice and innovation.

Technology makes enterprising use of knowledge, skills and practices for exploration and communication, some specific to areas within technology and some from other disciplines. These include digitally-aided design, programming, software development, various forms of technological modelling, and visual literacy – the ability to make sense of images and the ability to make images that make sense.

Why study technology?

With its focus on design thinking, technology education supports students to be innovative, reflective and critical in designing new models, products, software, systems and tools to benefit people while taking account of their impact on cultural, ethical, environmental and economic conditions.

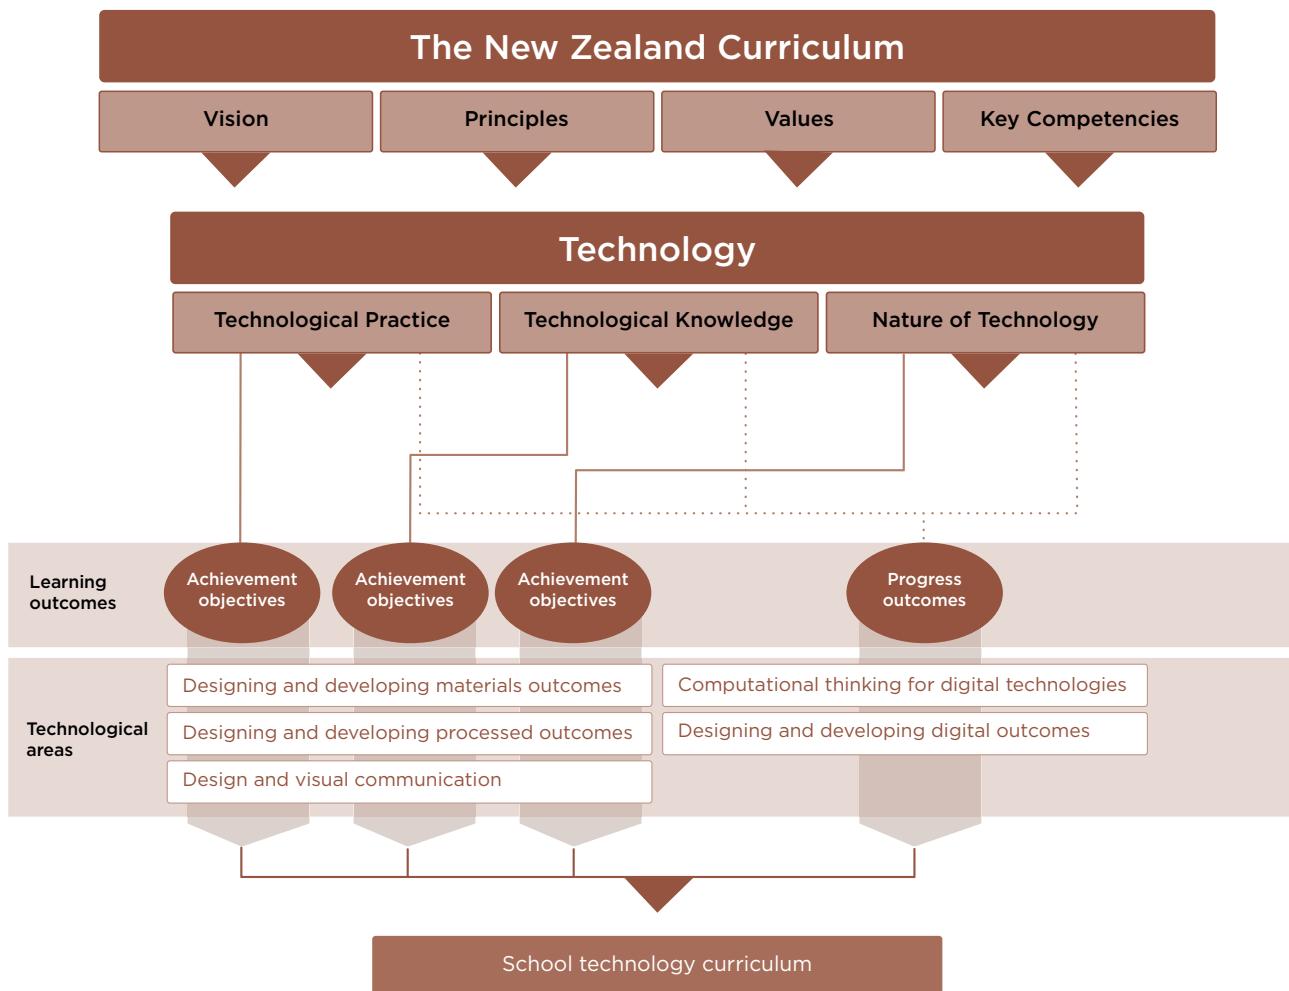

The aim is for students to develop broad technological knowledge, practices and dispositions that will equip them to participate in society as informed citizens and provide a platform for technology-related careers. Students learn that technology is the result of human activity by exploring stories and experiences from their heritage, from Aotearoa New Zealand's rich cultural environment, and from contemporary examples of technology. As they learn in technology, students draw on and further develop the key competencies.

Learning area structure

The technology learning area has three strands: Technological Practice, Technological Knowledge, and Nature of Technology. These three strands are embedded within each of five technological areas:

- computational thinking for digital technologies
- designing and developing digital outcomes
- designing and developing materials outcomes
- designing and developing processed outcomes
- design and visual communication.

The following diagram illustrates the structure of the learning area.

As the diagram shows, the three strands provide the organising structure for achievement objectives used in three of the technological areas (Designing and developing materials outcomes, Designing and developing processed outcomes, Design and visual communication), and they underpin progress outcomes for the other two areas (Computational thinking for digital technologies, Designing and developing digital outcomes).

Strands

Although the three strands are described separately below, in reality they are almost always integrated in teaching and learning programmes.

In **Technological Practice**, students examine the practice of others and undertake their own. They develop a range of outcomes, including concepts, plans, briefs, technological models, and fully realised products or systems. Students investigate issues and existing outcomes and use the understandings gained, together with design principles and approaches, to inform their own practice. They also learn to consider ethics, legal requirements, protocols, codes of practice, and the needs of and potential impacts on stakeholders and the environment.

Students develop **Technological Knowledge** particular to technological enterprises and environments and in relation to how and why things work. They learn how functional modelling is used to evaluate design ideas and how prototyping is used to evaluate the fitness for purpose of systems and products as they are developed. An understanding of material properties, uses and development is essential to understanding how and why products work the way they do. Similarly, an understanding of the constituent parts of systems and how these work together is essential to understanding how and why systems operate in the way they do.

For the **Nature of Technology**, students develop an understanding of technology as a discipline and of how it differs from other disciplines. They learn to critique the impact of technology on societies and the environment and to explore how developments and outcomes are valued by different peoples in different times. As they do so, they come to appreciate the socially embedded nature of technology and become increasingly able to engage with current and historical issues and to explore future scenarios.

Technological areas

The technological areas provide contexts for learning. At primary school, teachers will generally take a cross-curricular approach, with students learning in the technological areas as part of a topic or theme that encompasses several curriculum learning areas. This approach can also be applied in years 9 and 10, before students begin to specialise in particular technological areas.

Digital technologies

The first two of the five technological areas focus on developing students' capability to create digital technologies for specific purposes. In years 1–8, these two areas are usually implemented within other curriculum learning areas, integrating technology outcomes with the learning area outcomes.

These two areas also significantly contribute to students developing the knowledge and skills they need as digital citizens and as users of digital technologies across the curriculum. They also provide opportunities to further develop their key competencies.

By the end of year 10, students' digital technological knowledge and skills enable them to follow a predetermined process to design, develop, store, test and evaluate digital content to address a given issue. Throughout this process, students take into account immediate social and end-user considerations. They can independently decompose a computational problem into an algorithm that they use to create a program incorporating inputs, outputs, sequence, selection and iteration. They understand the role of systems in managing digital devices, security and application software, and they are able to apply file management conventions using a range of storage devices.

By the end of year 13, students who have specialised in digital technologies will design and develop fit-for-purpose digital outcomes, drawing on their knowledge of a range of digital applications and systems and taking into account a synthesis of social, ethical and end-user considerations. They understand how areas of computer science such as network communication protocols and artificial intelligence are underpinned by algorithms, data representation and programming, and they analyse how these are synthesised in real world applications. They use accepted software engineering methodologies to design, develop, document and test complex computer programs.

Computational thinking for digital technologies

Computational thinking enables students to express problems and formulate solutions in ways that means a computer (an information processing agent) can be used to solve them.

In this area, students develop algorithmic thinking skills and an understanding of the computer science principles that underpin all digital technologies. They become aware of what is and isn't possible with computing, allowing them to make judgments and informed decisions as citizens of the digital world.

Students learn core programming concepts and how to take advantage of the capabilities of computers, so that they can become creators of digital technologies, not just users. They develop an understanding of how computer data is stored, how all the information within a computer system is presented using digits, and the impact that different data representations have on the nature and use of this information.

Designing and developing digital outcomes

In this area, students understand that digital applications and systems are created for humans by humans. They develop increasingly sophisticated understandings and skills for designing and producing quality, fit-for-purpose, digital outcomes. They develop their understanding of the technologies people need in order to locate, analyse, evaluate and present digital information efficiently, effectively and ethically.

Students become more expert in manipulating and combining data, using information management tools to create an outcome. They become aware of the unique intellectual property issues that arise in digital systems, particularly with approaches to copyright and patents. They also develop understandings of how to build, install, and maintain computers, networks and systems so that they are secure and efficient.

Students develop knowledge and skills in using different technologies to create digital content for the web, interactive digital platforms and print. They construct digital media outcomes that integrate media types and incorporate original content. They also learn how electronic components and techniques are used to design digital devices and integrated to assemble and test an electronic environment.

Designing and developing materials outcomes

In this area, students develop knowledge and skills that enable them to form, transform and work with resistant materials, textiles and fashion. This allows them to create both conceptual and prototypic technological outcomes that solve problems and satisfy needs and opportunities. They develop knowledge about the systems, structures, machines and techniques used in manufacturing products, and they use manufacturing and quality assurance processes to produce prototypes and batches of a product.

Students' thinking becomes more and more reflective, critical and creative as they assess and critique materials outcomes in terms of quality of design, fitness for purpose, and impact and influence on society and the environment. Students become increasingly skilled in applying their knowledge of design principles to create innovative outcomes that realise opportunities and solve real-world problems.

Designing and developing processed outcomes

In this area, students develop knowledge of the materials and ingredients used to formulate food, chemical and biotechnological products. They form, transform and manipulate materials or ingredients to develop conceptual, prototypic and final technological outcomes that will meet the needs of an increasingly complex society.

Students engage in a range of processes related to food technology, biotechnology, chemical technology and agricultural technologies. They explore the impact of different economic and cultural concepts on the development of processed products, including their application in product preservation, packaging and storage. They also develop understandings of the systems, processes and techniques used in manufacturing products and gain experience from using these, along with related quality assurance procedures, to produce prototypes or multiple copies of a product.

Students demonstrate increasingly critical, reflective and creative thinking as they evaluate and critique technological outcomes in terms of the quality of their design, their fitness for purpose and their wider impacts. They become more and more skilled in applying their knowledge of design principles to create desired, feasible outcomes that resolve real-world issues.

Design and visual communication

In this area, students learn to apply design thinking. They develop an awareness of design by using visual communication to conceptualise and develop design ideas in response to a brief. In doing so, they develop visual literacy: the ability to make sense of images and the ability to make images that make sense. They apply their visual literacy through using sketching, digital modes and other modelling techniques to effectively communicate and present design ideas.

Students learn that designers identify the qualities and potential of design ideas in terms of the broad principles of design (aesthetics and function) and of sustainability. They also understand that designers are influenced by human, societal, environmental, historical and technological factors.

Learning pathways

Over the course of years 1–10, students learn in all five technological areas, developing their knowledge and skills in context. By offering a variety of contexts, teachers help their students to recognise links between technological areas. Students should be encouraged to access relevant knowledge and skills from other learning areas and to build on their developing key competencies.

Work towards progress outcomes in *computational thinking for digital technologies* and *designing and developing digital outcomes* should build each year in order to ensure learners achieve all of the significant learning steps.

In years 11–13, students work with fewer contexts in greater depth. This requires them to continue to draw fully on learning from other disciplines. For example, students working with materials and/or food technology will need to refer to chemistry, and students working on an architectural project will find that an understanding of art history is invaluable. Some schools may offer courses such as electronics and horticultural science as technology specialisations.

Learning for senior students opens up pathways that can lead to technology-related careers. Students may access workplace learning opportunities available in a range of industries or move on to further specialised tertiary study.

Achievement objectives

Level 1

Technological Practice

Students will:

Planning for practice

- Outline a general plan to support the development of an outcome, identifying appropriate steps and resources.

Brief development

- Describe the outcome they are developing and identify the attributes it should have, taking account of the need or opportunity and the resources available.

Outcome development and evaluation

- Investigate a context to communicate potential outcomes. Evaluate these against attributes; select and develop an outcome in keeping with the identified attributes.

Technological Knowledge

Students will:

Technological modelling

- Understand that functional models are used to represent reality and test design concepts and that prototypes are used to test technological outcomes.

Technological products

- Understand that technological products are made from materials that have performance properties.

Technological systems

- Understand that technological systems have inputs, controlled transformations, and outputs.

Nature of Technology

Students will:

Characteristics of technology

- Understand that technology is purposeful intervention through design.

Characteristics of technological outcomes

- Understand that technological outcomes are products or systems developed by people and have a physical nature and a functional nature.

Level 2

Technological Practice

Students will:

Planning for practice

- Develop a plan that identifies the key stages and the resources required to complete an outcome.

Brief development

- Explain the outcome they are developing and describe the attributes it should have, taking account of the need or opportunity and the resources available.

Outcome development and evaluation

- Investigate a context to develop ideas for potential outcomes. Evaluate these against the identified attributes, select, and develop an outcome. Evaluate the outcome in terms of the need or opportunity.

Technological Knowledge

Students will:

Technological modelling

- Understand that functional models are used to explore, test, and evaluate design concepts for potential outcomes and that prototyping is used to test a technological outcome for fitness of purpose.

Technological products

- Understand that there is a relationship between a material used and its performance properties in a technological product.

Technological systems

- Understand that there are relationships between the inputs, controlled transformations, and outputs occurring within simple technological systems.

Nature of Technology

Students will:

Characteristics of technology

- Understand that technology both reflects and changes society and the environment and increases people's capability.

Characteristics of technological outcomes

- Understand that technological outcomes are developed through technological practice and have related physical and functional natures.

Level 3

Technological Practice

Students will:

Planning for practice

- Undertake planning to identify the key stages and resources required to develop an outcome. Revisit planning to include reviews of progress and identify implications for subsequent decision making.

Brief development

- Describe the nature of an intended outcome, explaining how it addresses the need or opportunity. Describe the key attributes that enable development and evaluation of an outcome.

Outcome development and evaluation

- Investigate a context to develop ideas for potential outcomes. Trial and evaluate these against key attributes to select and develop an outcome to address the need or opportunity. Evaluate this outcome against the key attributes and how it addresses the need or opportunity.

Technological Knowledge

Students will:

Technological modelling

- Understand that different forms of functional modelling are used to inform decision making in the development of technological possibilities and that prototypes can be used to evaluate the fitness of technological outcomes for further development.

Technological products

- Understand the relationship between the materials used and their performance properties in technological products.

Technological systems

- Understand that technological systems are represented by symbolic language tools and understand the role played by the “black box” in technological systems.

Nature of Technology

Students will:

Characteristics of technology

- Understand how society and environments impact on and are influenced by technology in historical and contemporary contexts and that technological knowledge is validated by successful function.

Characteristics of technological outcomes

- Understand that technological outcomes are recognisable as fit for purpose by the relationship between their physical and functional natures.

Level 4

Technological Practice

Students will:

Planning for practice

- Undertake planning that includes reviewing the effectiveness of past actions and resourcing, exploring implications for future actions and accessing of resources, and consideration of stakeholder feedback, to enable the development of an outcome.

Brief development

- Justify the nature of an intended outcome in relation to the need or opportunity. Describe the key attributes identified in stakeholder feedback, which will inform the development of an outcome and its evaluation.

Outcome development and evaluation

- Investigate a context to develop ideas for feasible outcomes. Undertake functional modelling that takes account of stakeholder feedback in order to select and develop the outcome that best addresses the key attributes. Incorporating stakeholder feedback, evaluate the outcome’s fitness for purpose in terms of how well it addresses the need or opportunity.

Technological Knowledge

Students will:

Technological modelling

- Understand how different forms of functional modelling are used to explore possibilities and to justify decision making and how prototyping can be used to justify refinement of technological outcomes.

Technological products

- Understand that materials can be formed, manipulated, and/or transformed to enhance the fitness for purpose of a technological product.

Technological systems

- Understand how technological systems employ control to allow for the transformation of inputs to outputs.

Nature of Technology

Students will:

Characteristics of technology

- Understand how technological development expands human possibilities and how technology draws on knowledge from a wide range of disciplines.

Characteristics of technological outcomes

- Understand that technological outcomes can be interpreted in terms of how they might be used and by whom and that each has a proper function as well as possible alternative functions.

Level 5

Technological Practice

Students will:

Planning for practice

- Analyse their own and others' planning practices to inform the selection and use of planning tools. Use these to support and justify planning decisions (including those relating to the management of resources) that will see the development of an outcome through to completion.

Brief development

- Justify the nature of an intended outcome in relation to the need or opportunity. Describe specifications that reflect key stakeholder feedback and that will inform the development of an outcome and its evaluation.

Outcome development and evaluation

- Analyse their own and others' outcomes to inform the development of ideas for feasible outcomes. Undertake ongoing functional modelling and evaluation that takes account of key stakeholder feedback and trialling in the physical and social environments. Use the information gained to select and develop the outcome that best addresses the specifications. Evaluate the final outcome's fitness for purpose against the brief.

Technological Knowledge

Students will:

Technological modelling

- Understand how evidence, reasoning, and decision making in functional modelling contribute to the development of design concepts and how prototyping can be used to justify ongoing refinement of outcomes.

Technological products

- Understand how materials are selected, based on desired performance criteria.

Technological systems

- Understand the properties of subsystems within technological systems.

Nature of Technology

Students will:

Characteristics of technology

- Understand how people's perceptions and acceptance of technology impact on technological developments and how and why technological knowledge becomes codified.

Characteristics of technological outcomes

- Understand that technological outcomes are fit for purpose in terms of time and context. Understand the concept of malfunction and how "failure" can inform future outcomes.

Level 6

Technological Practice

Students will:

Planning for practice

- Critically analyse their own and others' past and current planning practices in order to make informed selection and effective use of planning tools. Use these to support and justify ongoing planning that will see the development of an outcome through to completion.

Brief development

- Justify the nature of an intended outcome in relation to the need or opportunity and justify specifications in terms of key stakeholder feedback and wider community considerations.

Outcome development and evaluation

- Critically analyse their own and others' outcomes to inform the development of ideas for feasible outcomes. Undertake ongoing experimentation and functional modelling, taking account of stakeholder feedback and trialling in the physical and social environments. Use the information gained to select, justify, and develop a final outcome. Evaluate this outcome's fitness for purpose against the brief and justify the evaluation using feedback from stakeholders.

Technological Knowledge

Students will:

Technological modelling

- Understand the role and nature of evidence and reasoning when managing risk through technological modelling.

Technological products

- Understand how materials are formed, manipulated, and transformed in different ways, depending on their properties, and understand the role of material evaluation in determining suitability for use in product development.

Technological systems

- Understand the implications of subsystems for the design, development, and maintenance of technological systems.

Nature of Technology

Students will:

Characteristics of technology

- Understand the interdisciplinary nature of technology and the implications of this for maximising possibilities through collaborative practice.

Characteristics of technological outcomes

- Understand that some technological outcomes can be perceived as both product and system. Understand how these outcomes impact on other outcomes and practices and on people's views of themselves and possible futures.

Level 7

Technological Practice

Students will:

Planning for practice

- Critically analyse their own and others' past and current planning and management practices in order to develop and employ project management practices that will ensure the effective development of an outcome to completion.

Brief development

- Justify the nature of an intended outcome in relation to the issue to be resolved and justify specifications in terms of key stakeholder feedback and wider community considerations.

Outcome development and evaluation

- Critically analyse their own and others' outcomes and evaluative practices to inform the development of ideas for feasible outcomes. Undertake a critical evaluation that is informed by ongoing experimentation and functional modelling, stakeholder feedback, and trialling in the physical and social environments. Use the information gained to select, justify, and develop an outcome. Evaluate this outcome's fitness for purpose against the brief. Justify the evaluation, using feedback from stakeholders and demonstrating a critical understanding of the issue.

Technological Knowledge

Students will:

Technological modelling

- Understand how the “should” and “could” decisions in technological modelling rely on an understanding of how evidence can change in value across contexts and how different tools are used to ascertain and mitigate risk.

Technological products

- Understand the concepts and processes employed in materials evaluation and the implications of these for design, development, maintenance, and disposal of technological products.

Technological systems

- Understand the concepts of redundancy and reliability and their implications for the design, development, and maintenance of technological systems.

Nature of Technology

Students will:

Characteristics of technology

- Understand the implications of ongoing contestation and competing priorities for complex and innovative decision making in technological development.

Characteristics of technological outcomes

- Understand that technological outcomes are a resolution of form and function priorities and that malfunction affects how people view and accept outcomes.

Level 8

Technological Practice

Students will:

Planning for practice

- Critically analyse their own and others’ past and current planning and management practices in order to develop and employ project management practices that will ensure the efficient development of an outcome to completion.

Brief development

- Justify the nature of an intended outcome in relation to the context and the issue to be resolved. Justify specifications in terms of key stakeholder feedback and wider community considerations.

Outcome development and evaluation

- Critically analyse their own and others’ outcomes and fitness-for-purpose determinations in order to inform the development of ideas for feasible outcomes. Undertake a critical evaluation that is informed by ongoing experimentation and functional modelling, stakeholder feedback, trialling in the physical and social environments, and an understanding of the issue as it relates to the wider context. Use the information gained to select, justify, and develop an outcome. Evaluate this outcome’s fitness for purpose against the brief. Justify the evaluation, using feedback from stakeholders and demonstrating a critical understanding of the issue that takes account of all contextual dimensions.

Technological Knowledge

Students will:

Technological modelling

- Understand the role of technological modelling as a key part of technological development, justifying its importance on moral, ethical, sustainable, cultural, political, economic, and historical grounds.

Technological products

- Understand the concepts and processes employed in materials development and evaluation and the implications of these for design, development, maintenance, and disposal of technological products.

Technological systems

- Understand operational parameters and their role in the design, development, and maintenance of technological systems.

Nature of Technology

Students will:

Characteristics of technology

- Understand the implications of technology as intervention by design and how interventions have consequences, known and unknown, intended and unintended.

Characteristics of technological outcomes

- Understand how technological outcomes can be interpreted and justified as fit for purpose in their historical, cultural, social, and geographical location.

Progress outcomes

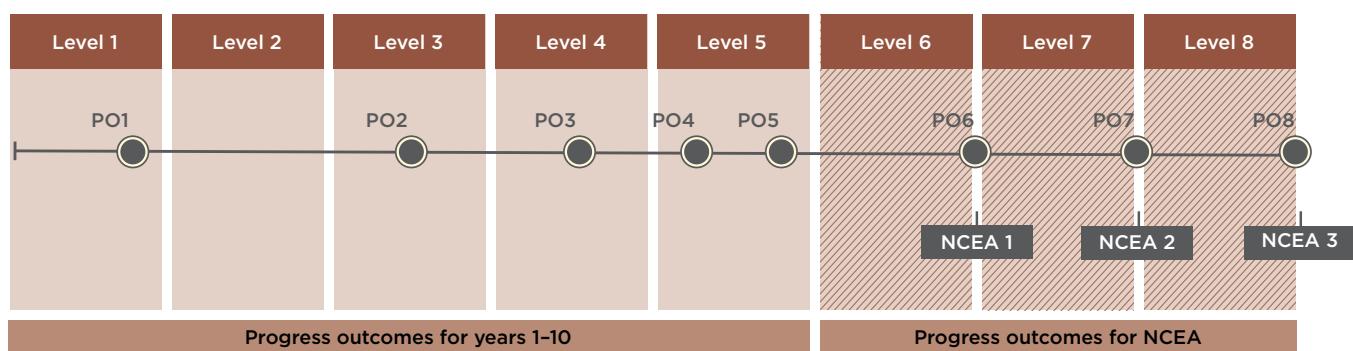

Computational thinking for digital technologies

The progress outcomes describe the significant learning steps that students take as they develop their expertise in computational thinking for digital technologies.

The diagram below shows the alignment between levels 1–5 of the New Zealand Curriculum and the progress outcomes for computational thinking. The uneven spacing of the progress outcomes reflects the different learning and time required for each outcome and is based on data collected during the development of the digital learning progressions.

Progress outcomes 6–8 set out the learning expected for students engaging in more intensive and specialised digital technologies programmes for NCEA 1, 2 and 3. For this reason, they are directly aligned with levels 6–8 of the curriculum.

Computational thinking for digital technologies

The alignment to levels 1–5 of the New Zealand Curriculum (NZC) is tentative and theoretically derived until teachers have had the opportunity to implement the digital progressions.

Progress outcome 1

In authentic contexts and taking account of end-users, students use their decomposition skills to break down simple non-computerised tasks into precise, unambiguous, step-by-step instructions (algorithmic thinking). They give these instructions, identify any errors in them as they are followed, and correct them (simple debugging).

Progress outcome 2

In authentic contexts and taking account of end-users, students give, follow and debug simple algorithms in computerised and non-computerised contexts. They use these algorithms to create simple programs involving outputs and sequencing (putting instructions one after the other) in age-appropriate programming environments.

Progress outcome 3

In authentic contexts and taking account of end-users, students decompose problems into step-by-step instructions to create algorithms for computer programs. They use logical thinking to predict the behaviour of the programs, and they understand that there can be more than one algorithm for the same problem. They develop and debug simple programs that use inputs, outputs, sequence and iteration (repeating part of the algorithm with a loop). They understand that digital devices store data using just two states represented by binary digits (bits).

Progress outcome 4

In authentic contexts and taking account of end-users, students decompose problems to create simple algorithms using the three building blocks of programming: sequence, selection, and iteration. They implement these algorithms by creating programs that use inputs, outputs, sequence, basic selection using comparative operators, and iteration. They debug simple algorithms and programs by identifying when things go wrong with their instructions and correcting them, and they are able to explain why things went wrong and how they fixed them.

Students understand that digital devices represent data with binary digits and have ways of detecting errors in data storage and transmission. They evaluate the efficiency of algorithms, recognising that computers need to search and sort large amounts of data. They also evaluate user interfaces in relation to their efficiency and usability.

Progress outcome 5

In authentic contexts and taking account of end-users, students independently decompose problems into algorithms. They use these algorithms to create programs with inputs, outputs, sequence, selection using comparative and logical operators and variables of different data types, and iteration. They determine when to use different types of control structures.

Students document their programs, using an organised approach for testing and debugging. They understand how computers store more complex types of data using binary digits, and they develop programs considering human-computer interaction (HCI) heuristics.

Progress outcome 6

In authentic contexts and taking account of end-users, students determine and compare the “cost” (computational complexity) of two iterative algorithms for the same problem size. They understand the concept of compression coding for different media types, its typical uses, and how it enables widely used technologies to function.

Students use an iterative process to design, develop, document and test basic computer programs. They apply design principles and usability heuristics to their own designs and evaluate user interfaces in terms of them.

Progress outcome 7

In authentic contexts and taking account of end-users, students analyse concepts in digital technologies (e.g., information systems, encryption, error control, complexity and tractability, autonomous control) by explaining the relevant mechanisms that underpin them, how they are used in real world applications, and the key problems or issues related to them.

Students discuss the purpose of a selection of data structures and evaluate their use in terms of trade-offs between performance and storage requirements and their suitability for different algorithms. They use an iterative process to design, develop, document and test advanced computer programs.

Progress outcome 8

In authentic contexts and taking account of end-users, students evaluate concepts in digital technologies (e.g., formal languages, network communication protocols, artificial intelligence, graphics and visual computing, big data, social algorithms) in relation to how key mechanisms underpin them and how they are applied in different scenarios when developing real world applications.

Students understand accepted software engineering methodologies and user experience design processes and apply their key concepts to design, develop, document and test complex computer programs.

Designing and developing digital outcomes

The progress outcomes describe the significant learning steps that students take as they develop their expertise in designing and developing digital outcomes.

The diagram below shows the alignment between levels 1–5 of the New Zealand Curriculum and the progress outcomes for designing and developing digital outcomes. The uneven spacing of the progress outcomes reflects the different learning and time required for each outcome and is based on data collected during the development of the digital learning progressions.

Progress outcomes 4–6 set out the learning expected for students engaging in more intensive and specialised digital technologies programmes for NCEA 1, 2 and 3. For this reason, they are directly aligned with levels 6–8 of the curriculum.

Designing and developing digital outcomes

The alignment to levels 1–5 of the New Zealand Curriculum (NZC) is tentative and theoretically derived until teachers have had the opportunity to implement the digital progressions.

Progress outcome 1

In authentic contexts and taking account of end-users, students participate in teacher-led activities to develop, manipulate, store, retrieve and share digital content in order to meet technological challenges. In doing so, they identify digital devices and their purposes and understand that humans make them. They know how to use some applications, they can identify the inputs and outputs of a system, and they understand that digital devices store content, which can be retrieved later.

Progress outcome 2

In authentic contexts and taking account of end-users, students make decisions about creating, manipulating, storing, retrieving, sharing and testing digital content for a specific purpose, given particular parameters, tools, and techniques. They understand that digital devices impact on humans and society and that both the devices and their impact change over time.

Students identify the specific role of components in a simple input-process-output system and how they work together, and they recognise the “control role” that humans have in the system. They can select from an increasing range of applications and file types to develop outcomes for particular purposes.

Progress outcome 3

In authentic contexts, students follow a defined process to design, develop, store, test and evaluate digital content to address given contexts or issues, taking into account immediate social, ethical and end-user considerations. They identify the key features of selected software and choose the most appropriate software and file types to develop and combine digital content.

Students understand the role of operating systems in managing digital devices, security, and application software and are able to apply file management conventions using a range of storage devices. They understand that with storing data comes responsibility for ensuring security and privacy.

Progress outcome 4

In authentic contexts, students investigate and consider possible solutions for a given context or issue. With support, they use an iterative process to design, develop, store and test digital outcomes, identifying and evaluating relevant social, ethical and end-user considerations. They use information from testing and apply appropriate tools, techniques, procedures and protocols to improve the quality of the outcomes and to ensure they are fit-for-purpose and meet end-user requirements.

Progress outcome 5

In authentic contexts and with support, students investigate a specialised digital technologies area (e.g., digital media, digital information, electronic environments, user experience design, digital systems) and propose possible solutions to issues they identify. They independently apply an iterative process to design, develop, store and test digital outcomes that enable their solutions, identifying, evaluating, prioritising and responding to relevant social, ethical and end-user considerations. They use information from testing and, with increasing confidence, optimise tools, techniques, procedures and protocols to improve the quality of the outcomes. They apply evaluative processes to ensure the outcomes are fit-for-purpose and meet end-user requirements.

Progress outcome 6

In authentic contexts, students independently investigate a specialised digital technologies area and propose possible solutions to issues they identify. They work independently or within collaborative, cross-functional teams to apply an iterative development process to plan, design, develop, test and create quality, fit-for-purpose digital outcomes that enable their solutions, synthesising relevant social, ethical and end-user considerations as they develop digital content.

Students integrate in the outcomes they develop specialised knowledge of digital applications and systems from a range of areas, including: network architecture; complex electronics environments and embedded systems; interrelated computing devices, hardware and applications; digital information systems; user experience design; complex management of digital information; and creative digital media.

Technology in the New Zealand Curriculum

Aotearoa New Zealand's histories in the New Zealand Curriculum

Ngā mihi | Acknowledgments

Our thanks go to all those who have contributed to the development of Aotearoa New Zealand's histories in the New Zealand Curriculum:

- members of the writing group
- Ohu Matua and Whakaruruhau members
- kaiako, teachers, tumuaki, and principals
- whānau, iwi, and hapū
- community groups, education sector bodies, academics, and the wider community.

Aotearoa New Zealand's histories is part of the social sciences learning area in the New Zealand Curriculum. The draft refresh of social sciences will be available in 2022 and the final in 2025.

Developed and published by the New Zealand Ministry of Education.

Purpose statement for Aotearoa New Zealand's histories

Me tiro whakamuri, kia anga whakamua.

If we want to shape Aotearoa New Zealand's future, start with our past.

Social sciences creates a curiosity about and respect for places, people, cultures, and systems. Students learn to contribute, participate, and take positive action as informed, ethical, and empathetic citizens with a concern for the wellbeing of communities and a commitment to a fair society for all.

Learning in the social sciences aims to help students thrive in the diverse communities and environments of Aotearoa New Zealand and beyond. This includes understanding the mutual responsibilities to Te Tiriti o Waitangi | The Treaty of Waitangi of tangata whenua and tauwi as they live together in relationships that promote respect for one another, tikanga, and the natural environment.

Aotearoa New Zealand's histories supports this aim through its focus on stories of interactions across time that connect people to each other and to place. Students will build understandings about how Māori, and all people for whom New Zealand has been and is their home, have shaped Aotearoa New Zealand's past. This will help them make sense of the present and inform future decisions and actions.

There are three elements in the Aotearoa New Zealand's histories curriculum content: Understand, Know, and Do. Teachers design learning experiences that weave these elements together so that student learning is deep and meaningful.

At years 11–13, students deepen their understandings, knowledge, and practices through subjects that draw from Aotearoa New Zealand's histories.

Selecting meaningful topics

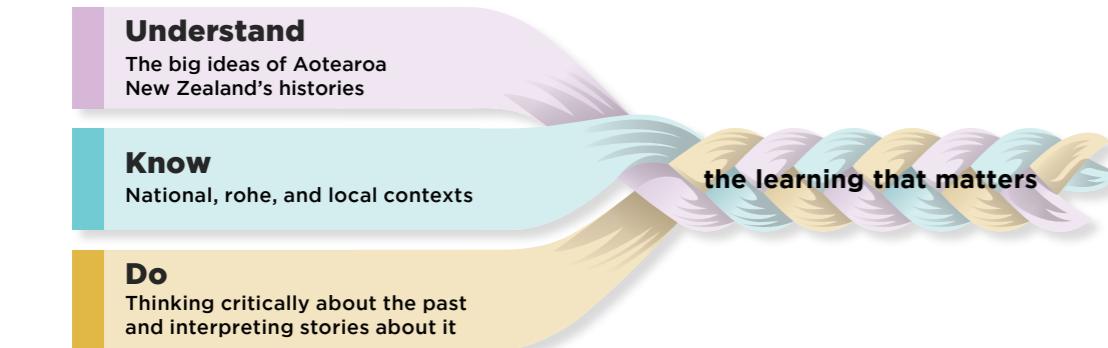

Selecting meaningful topics is critical if students are to deepen their understanding of the curriculum's big ideas and be able to apply them to both familiar and new contexts. Teachers will choose topics that have personal and social significance for society and that engage students at local, national, and global levels.

When selecting a topic, teachers can ask the following questions:

- How will the topic help students explore the big ideas: the foundational and continuous **history of Māori**, the impact of **colonisation and settlement**, the **power** people and groups hold, and the **relationships** that shaped our history?
- How will the topic draw on stories, examples, and perspectives so that students learn about the history of their local area and of Aotearoa New Zealand?
- How will the topic draw on stories from iwi and hapū about their history in the rohe?
- How will the topic support student-led inquiries into the history of Aotearoa New Zealand, the rohe, and the local area?
- In what ways is the topic important to the rohe or local area now?
- How will this topic support students to apply their learning to new and more complex contexts?

Teachers can then support students to use inquiry practices within the local curriculum, so that students are thinking critically about the past and the different ways in which it is interpreted.

Overview

Understand

Big ideas

E kore au e ngaro; he kākano i ruia mai i Rangiātea.

Māori history is the foundational and continuous history of Aotearoa New Zealand.

Māori have been settling, storying, shaping, and have been shaped by these lands and waters for centuries. Māori history forms a continuous thread, directly linking the contemporary world to the past. It is characterised by diverse experiences for individuals, hapū, and iwi within underlying and enduring cultural similarities.

Kaua e uhia Te Tiriti o Waitangi ki te kara o Ingarangi. Engari me uhi anō ki tōu kahu Māori, ki te kahu o tēnei motu ake.

Colonisation and settlement have been central to Aotearoa New Zealand's histories for the past 200 years.

The settlement of Aotearoa New Zealand has contributed to an increasingly diverse population, with many languages and cultures now part of its fabric.

Colonisation began as part of a worldwide imperial project. It has been a complex, contested process, experienced and negotiated differently in different parts of Aotearoa New Zealand over time. Aotearoa New Zealand has also colonised parts of the Pacific.

Ko te pipi te tuatahi, ko te kaunuku te tuarua.

The course of Aotearoa New Zealand's histories has been shaped by the use of power.

Individuals, groups, and organisations have exerted and contested power in ways that improve the lives of people and communities, and in ways that lead to exclusion, injustice, and conflict.

Tuia i runga, tuia i raro, tuia i waho, tuia i roto, tuia te muka tāngata.

Relationships and connections between people and across boundaries have shaped the course of Aotearoa New Zealand's histories.

People in Aotearoa New Zealand have been connected locally, nationally, and globally through voyaging, discovery, trade, aid, conflict, and creative exchanges. This has led to the adoption of new ideas and technologies, political institutions and alliances, and social movements.

Know Contexts

Whakapapa me te whanaungatanga Culture and identity

This context focuses on how the past shapes who we are today – our familial links and bonds, our networks and connections, our sense of obligation, and the stories woven into our collective and diverse identities.

Tino rangatiratanga me te kāwanatanga Government and organisation

This context focuses on the history of authority and control, and the contests over them. At the heart of these contests are the authorities guaranteed by Te Tiriti o Waitangi | The Treaty of Waitangi. This context also considers the history of the relationships between government agencies and the people who lived here and in the Pacific.

Tūrangawaewae me te kaitiakitanga Place and environment

This context focuses on the relationships of individuals, groups, and communities with the land, water, and resources, and on the history of contests over their control, use, and protection.

Kōwhiringa ohaoha me te whai oranga Economic activity

This context focuses on the choices people made to meet their needs and wants, how they made a living individually and collectively, and the resulting exchanges and interconnections.

Rohe and local contexts

- Rohe historical contexts as defined by iwi and hapū and guided by the question *What stories do local iwi and hapū share about the history of the people of this rohe?*
- Historical contexts relevant to local communities and guided by the question *What stories are told about the people, events, and changes that are important to this area?*
- Contexts that reflect the diverse histories and experiences of the peoples of Aotearoa New Zealand
- Topics and stories chosen by students when inquiring into the history of the rohe and local area

Do Inquiry practices

Identifying and exploring historical relationships

The construction of narratives about the past is based on the ability to sequence events and changes and to identify historical relationships between them and how long ago they happened. Depending on who is telling the story, the same story can be told in different ways.

Identifying sources and perspectives

Drawing on a broad base of historical sources, in varied forms, provides a fuller and layered understanding of the past. This includes paying deliberate attention to mātauranga

Māori sources and approaches. When drawing evidence from sources, it is important to consider authorship and purpose and to identify voices that are missing.

Interpreting past experiences, decisions, and actions

Interpretations of people's past experiences, decisions, and actions need to take account of the attitudes and values of the time and people's predicaments and points of view. By using these interpretations and reflecting on our own values, we can make evidence-based ethical judgements about the past.

Progress outcome by the end of year 3

(Foundation)

Understand

Through building knowledge about contexts and drawing on inquiry practices, I am beginning to understand that:

- Māori history is the foundational and continuous history of Aotearoa New Zealand
- colonisation and settlement have been central to Aotearoa New Zealand's histories for the past 200 years
- the course of Aotearoa New Zealand's histories has been shaped by the use of power
- relationships and connections between people and across boundaries have shaped the course of Aotearoa New Zealand's histories.

Know

I have explored the diverse histories and experiences of the peoples of Aotearoa New Zealand.

I have built my knowledge of stories about the people, events, and changes that have been important in my local area, including knowledge of the stories iwi and hapū share about their history in the rohe.

For the national contexts, I know the following:

Whakapapa me te whanaungatanga Culture and identity

Māori are tangata whenua. They were the first people of this land and have stories about their origins and arrival.

People in our area have come from a variety of places and some retain connections to those places.

Tino rangatiratanga me te kāwanatanga Government and organisation

Waitangi Day marks the significance of the initial signing of Te Tiriti o Waitangi | The Treaty of Waitangi. We recall what happened at Waitangi at the time of the signing and who was there.

This helps us understand why we have a holiday.

Tūrangawaewae me te kaitiakitanga Place and environment

Tangata whenua are deeply connected to the local area. Naming places was key to establishing and maintaining mana and tūrangawaewae.

Many of the names of geographical features, towns, buildings, streets, and places tell stories. Sometimes there is more than one story.

Kōwhiringa ohaoha me te whai oranga Economic activity

The ways different groups of people have lived and worked in this rohe have changed over time.

Do

In my learning in Aotearoa New Zealand's histories, I can:

- retell a story from the past and talk about how other people might tell it differently
- use historical sources, giving deliberate attention to mātauranga Māori sources, to help answer my questions about the past
- make observations about how people have acted in the past and how they act today.

Years 1–3: Key knowledge

Key questions

Learning experiences

Whakapapa me te whanaungatanga | Culture and identity

Māori are tangata whenua. They were the first people of this land and have stories about their origins and arrival.

People in our area have come from a variety of places and some retain connections to those places.

What stories do hapū and iwi tell about their origins?

Where do people in our community come from? Do they have connections to the places that they come from? How do they keep up those connections?

Explore examples of:

- kōrero pūrākau that are widespread (e.g., Rangi and Papa, Māui) and those that are unique to local iwi
- stories of students who live in the area, including what they know about their origins and the connections they retain with them.

Tino rangatiratanga me te kāwanatanga | Government and organisation

Waitangi Day marks the significance of the initial signing of Te Tiriti o Waitangi | The Treaty of Waitangi. We recall what happened at Waitangi at the time of the signing and who was there. This helps us understand why we have a holiday.

Why is 6 February called Waitangi Day? How does the community acknowledge the significance of 6 February 1840? What do we know about the people who were at Waitangi around the time of signing?

Explore examples of:

- the range of people present on 6 February 1840 – groups of Māori from throughout the north, missionaries, Pākehā settlers, women and children, and some notable public figures: Hōne Heke, Tāmati Wāka Nene, Eruera Maihi Patuone, Iwikau Te Heuheu from Ngāti Tūwharetoa, Lieutenant-Governor Hobson, James Busby, Henry and Edward Williams, William Colenso, and Bishop Pompallier
- other places in New Zealand where the nine separate sheets of Te Tiriti were signed – the two versions were taken around Aotearoa. More than 500 chiefs, including some women, signed. Not all Māori chiefs signed.

Tūrangawaewae me te kaitiakitanga | Place and environment

Tangata whenua are deeply connected to the local area. Naming places was key to establishing and maintaining mana and tūrangawaewae.

Many of the names of geographical features, towns, buildings, streets, and places tell stories. Sometimes there is more than one story.

What are the names of the features of the landscape in our area? Do some features have more than one name? If so, why, and where do the names come from?

How did Māori name marae, hapū, iwi, and features of the landscape? How and why have some place names in Aotearoa New Zealand changed?

Explore examples of:

- tangata whenua connections to the local area – names of marae, hapū, iwi, and geological features and how they relate to experiences and whakapapa
- names of geographical features, towns, places, streets, and buildings, and the stories people tell about those names.

Kōwhiringa ohaoha me te whai oranga | Economic activity

The ways different groups of people have lived and worked in this rohe have changed over time.

Who were the first people to live in our area? What are the stories about how they have met their needs and wants?

Who else has lived here over time? What are the stories about how these people have met their needs and wants?

Explore examples of:

- how the first people who lived in the area provided for themselves and others (e.g., with food, shelter, clothing, technology, tools, work, and trade and exchange)
- how groups who have lived in the area at different times have provided for themselves and others (e.g., with food, shelter, clothing, technology, tools, work, and trade and exchange).

Progress outcome by the end of year 6

Understand

Through building knowledge about contexts and drawing on inquiry practices, I have a deeper understanding that:

- Māori history is the foundational and continuous history of Aotearoa New Zealand
- colonisation and settlement have been central to Aotearoa New Zealand's histories for the past 200 years
- the course of Aotearoa New Zealand's histories has been shaped by the use of power
- relationships and connections between people and across boundaries have shaped the course of Aotearoa New Zealand's histories.

Know

I have explored the diverse histories and experiences of the peoples of Aotearoa New Zealand.

I have built my knowledge of stories about the people, events, and changes that have been important in my local area, including knowledge of the stories iwi and hapū share about their history in the rohe.

For the national contexts, I know the following:

Whakapapa me te whanaungatanga Culture and identity

The stories of groups of people from different periods in our history convey their reasons for and experiences of migration. These stories have shaped their culture and identity in Aotearoa New Zealand.

Māori voyaging through the Pacific was deliberate and skilful and brought with it Pacific whakapapa and cultural identities. These identities were transformed over the centuries through adaptations to and relationships with the environment, and through the formation of hapū and iwi that eventually occupied Aotearoa New Zealand.

Individuals and communities have responded to international conflicts in a range of ways for a range of reasons.

Tino rangatiratanga me te kāwanatanga Government and organisation

Te Tiriti o Waitangi | The Treaty of Waitangi was signed in different places. The two versions of the Treaty say different things about who would have authority. Māori understandings were based on the version in te reo Māori, which the vast majority of Māori signed.

Governments have selectively supported or excluded people through processes associated with voting rights, access to education, health, and welfare provision, reflecting prevailing public attitudes of the time. Often equitable treatment has been sought by people, including Māori, Chinese, women, children, and disabled people.

Tūrangawaewae me te kaitiakitanga Place and environment

People adapted their technologies and tools to the new environment of Aotearoa New Zealand.

Kōwhiringa ohaoha me te whai oranga Economic activity

Traditional Māori economies were finely tuned to the resources within each rohe, which provided the basis for trade between iwi. There were complicated economic relationships between iwi and early newcomers as newcomers sought resources.

Do

In my learning in Aotearoa New Zealand's histories, I can:

- construct an historical sequence of related events and changes, show how long ago they happened, and say how other people might construct the sequence differently
- use historical sources, giving deliberate attention to mātauranga Māori sources, to gather evidence to answer my questions about the past. I can identify views that are missing and note how this may affect my answers
- identify the attitudes and values that motivated people in the past and compare them with attitudes and values of today.

Years 4–6: Key knowledge

Key questions

Learning experiences

Whakapapa me te whanaungatanga | Culture and identity

The stories of groups of people from different periods in our history convey their reasons for and experiences of migration. These stories have shaped their culture and identity in Aotearoa New Zealand.

Māori voyaging through the Pacific was deliberate and skilful and brought with it Pacific whakapapa and cultural identities. These identities were transformed over the centuries through adaptations to and relationships with the environment, and through the formation of hapū and iwi that eventually occupied Aotearoa New Zealand.

Individuals and communities have responded to international conflicts in a range of ways for a range of reasons.

What stories do different groups of people tell about their experiences of migration? When did they come, who did they come with, and why did they come? How did these stories shape who they are now?

What stories do hapū and iwi tell about their whakapapa and their voyaging and exploration?

How have different groups of people in our community responded to the international conflicts that Aotearoa New Zealand has been involved in? What kinds of jobs were these people doing?

Explore examples of:

- **stories of journeys to Aotearoa** (e.g., by waka and sailing, steam, and motor-driven ships; on early and later flights; as boat people; involving the challenges of travel and different journey lengths over time)
- **stories of journeys by different groups at different times** (e.g., by early British, Irish, Chinese, and Indian migrants; by Pacific and Asian communities and communities from continental Europe, the Americas, and the African continent; and by refugee and minority communities)
- **experiences of arriving in a new and different land** – the different climate, food, culture, and language
- **how these experiences have shaped identities** (e.g., as iwi, and as distinctive communities).

Explore examples of:

- **stories from iwi** about their point of origin, why they left, and whakapapa connections to their waka, its captain, and its landing site(s)
- **aspects of the natural world that guide oceanic navigation** – the flight paths of migratory birds, the sun and stars, ocean swells, changes in wave patterns, the presence of certain fish and birds, flotsam, and cloud formations
- **how Māori would have adapted in this new land** – from customary societal structures in the Pacific (not immediately viable given small numbers and the priority to survive) to the gradual formation of more recognisable iwi and hapū structures, to strengthened iwi identity, and to working collectively in more settled agricultural communities, protected through the development of fortified kāinga.

Explore examples of:

- **responses that reflected personal or public views**, such as volunteering, conscription, the Māori Battalion, Cook Islands and Niue contributions to the New Zealand Expeditionary Force in the First World War, Chinese and Indian Anzacs, realm country contributions, and fundraising (e.g., by Khaki Corps for the South African War)
- **essential jobs in Aotearoa New Zealand** and who did them them – nursing, auxiliaries, military intelligence, the home front, and peacekeeping
- **objections to participation** (e.g., conscientious objection and protests)
- **views about participation** (e.g., by Sir Apirana Ngata and Te Puea Hērangi).

Years 4–6: Key knowledge

Key questions

Learning experiences

Tino rangatiratanga me te kāwanatanga | Government and organisation

Te Tiriti o Waitangi | The Treaty of Waitangi was signed in different places. The two versions of the Treaty say different things about who would have authority. Māori understandings were based on the version in te reo Māori, which the vast majority of Māori signed.

Governments have selectively supported or excluded people through processes associated with voting rights, access to education, health, and welfare provision, reflecting prevailing public attitudes of the time. Often equitable treatment has been sought by people, including Māori, Chinese, women, children, and disabled people.

How did iwi and hapū in our rohe participate (or not) in the signing of Te Tiriti o Waitangi | The Treaty of Waitangi? Who was present and what was debated? How was participation similar or different elsewhere?

What were the range of views expressed by rangatira Māori at the signings of Te Tiriti o Waitangi?

What are the differences between the English language and te reo Māori versions of the Treaty | Te Tiriti? What is the significance of these differences?

How, over time, have various New Zealand governments restricted voting rights? How have people advocated for their rights? How did the Government respond to the hardships of the Great Depression?

Explore examples of:

- **the range of views among rangatira Māori** – some expressed strong reservations, including the possible effects of the Treaty on chiefly authority, land, and trade; some were supportive, seeing Te Tiriti as a means of curbing Pākehā lawlessness and of ensuring ongoing, mutually beneficial trading relationships
- **the places where Te Tiriti | the Treaty was signed** – while approximately 500 people signed at various locations, not all had the opportunity to sign
- **the differences between the English language and te reo Māori versions** – differing key words and phrases and their meanings (e.g., sovereignty, kāwanatanga, and tino rangatiratanga) and how they relate to the assurances the missionaries at Waitangi offered Māori about who would have authority and what they would have authority over.

Explore examples of:

- **restrictions on representation and voting** – the initial basis of property possession and individual title (as derived from British law), which privileged male Pākehā (Māori men and women still owned land, but communally rather than by individual title); the disproportionate allocation of Māori seats compared to Pākehā; the denial of the vote to women (based on British law); the exclusion of Chinese from voting until 1952
- **seeking equitable treatment:**
 - **women and the vote** – the formation of the Women’s Christian Temperance Union (WCTU) after the visit of Mary Clement Leavitt from the US in 1885; the establishment of the Women’s Franchise Leagues; the leadership of Kate Sheppard and of Meri Te Tai Mangakāhia (in speaking in the Kotahitanga parliament, calling for the right for women to vote and be elected to that parliament)
 - **wahine Māori leadership** – the distinctive contributions of Meri Te Tai Mangakāhia, Te Puea Hērangi, the Māori Women’s Welfare League, Te Kōhanga Reo, Dame Whina Cooper, Whetu Tirikatene-Sullivan, and Georgina Beyer
 - **minority community responses** – through petitioning the Crown (e.g., the 1901 Chinese anti-opium petition, and the 1947 petition for refugee Chinese women and children to remain in New Zealand), through advocacy and support (e.g., CCS Disability Action, and advocacy by IHC), and through activism (e.g., the Disabled Persons Assembly and the Deaf community’s lobbying for recognition of New Zealand Sign Language as an official language)
- **government policies to support people** – for example, the 1930s ‘cradle to grave’ welfare state reforms, which marked a change from selective support for the ‘deserving poor’ through charities and government relief schemes to a significant ideological shift in the state’s views of its responsibilities (e.g., through the provision of state housing, family benefits, free education and dental care to secondary school level, more generous pensions, free milk in schools, and children’s health camps).

Years 4–6: Key knowledge

Key questions

Learning experiences

Tūrangawaewae me te kaitiakitanga | Place and environment

People adapted their technologies and tools to the new environment of Aotearoa New Zealand.

What are the origin stories of mana whenua? What technologies and tools did Māori bring to Aotearoa New Zealand? What adaptations did early Māori make to enable them to survive and thrive in a new environment? How did these differ across Aotearoa New Zealand?

How did mana whenua, early resource seekers, and settlers impact on the natural environment? How did mana whenua engage with early newcomers?

Explore examples of:

- the technologies and tools Māori brought to Aotearoa New Zealand (e.g., hunting and fishing tools and techniques, weapons, clothing, food and gardening practices)
- adaptations to the very different climate and resources of Aotearoa New Zealand (e.g., of language for new phenomena such as hail, technologies, food, shelter, and clothing)
- food production – for example, a phase of hunter-gathering, then the resumption of gardening as the main source of food production (adapted to the new environment, based around kāinga, and following a lunar calendar with the new year beginning in winter when the stars of Matariki rose before dawn)
- early European use of the environment (e.g., the harvesting of seals and whales, the felling of timber, and trading for flax).

Kōwhiringa ohaoha me te whai oranga | Economic activity

Traditional Māori economies were finely tuned to the resources within each rohe, which provided the basis for trade between iwi. There were complicated economic relationships between iwi and early newcomers as newcomers sought resources.

How were iwi and hapū economies shaped by the particular resources of their rohe? How did specialisation create opportunities for exchange between iwi? What was the basis of this exchange? What was exchanged, why, and with whom?

Explore examples of:

- iwi economies based on unique local resources – for example, inland North Island iwi hunting birds and fishing for tuna across wide areas; the exploitation of thermal resources by Te Arawa and Ngāti Tūwharetoa; river iwi catching tuna; the access of coastal iwi to rich kaimoana; the extensive gardens developed in some parts of the country; in much of the South Island, the gathering of resources on seasonal heke, including mutton birds from the Tītī Islands
- exchanges between iwi (e.g., of preserved foods, tools, weapons, taonga, whalebone, argillite, obsidian, and pounamu)
- economic relationships between coastal iwi and early newcomers such as sealers, whalers, and traders – hapū began to engage more fully with new economic activities, due to a desire to access European trade goods and as an expression of manaakitanga; this in turn linked Māori into a globalising economy, with some joint ventures between Māori and Pākehā (e.g., whaling stations, and the shipyards at Hōreke).

Progress outcome by the end of year 8

Understand

Through building knowledge about contexts and drawing on inquiry practices, I have a broader and deeper understanding that:

- Māori history is the foundational and continuous history of Aotearoa New Zealand
- colonisation and settlement have been central to Aotearoa New Zealand's histories for the past 200 years
- the course of Aotearoa New Zealand's histories has been shaped by the use of power
- relationships and connections between people and across boundaries have shaped the course of Aotearoa New Zealand's histories.

Know

I have explored the diverse histories and experiences of the peoples of Aotearoa New Zealand.

I have built my knowledge of stories about the people, events, and changes that have been important in my local area, including knowledge of the stories iwi and hapū share about their history in the rohe.

For the national contexts, I know the following:

Whakapapa me te whanaungatanga Culture and identity

Mid-twentieth-century Māori migration to New Zealand cities occurred at an unprecedented pace and scale, disrupting the whakapapa of te reo and tikanga and depopulating papa kāinga. New approaches to being Māori and retaining iwi values and practices were created and debated. Movements to reassert Māori language, culture, and identity arose throughout the country.

Over time people from a wide range of cultures have participated in and contributed to Aotearoa New Zealand, while retaining and adapting their distinctive identities. The histories of Chinese, Indian, and other Asian communities, Pacific communities, refugee and faith-based communities, disability communities, and the Deaf community demonstrate how this has been experienced. Some have met barriers.

Advocating for the right to citizenship and respect for difference has contributed to the development of a more diverse nation.

Tino rangatiratanga me te kāwanatanga Government and organisation

The signings of He Whakaputanga o te Rangatiratanga o Nu Tirenī | The Declaration of Independence and Te Tiriti o Waitangi | The Treaty of Waitangi emerged from a long period of complex interactions between hapū/iwi and newcomers in which Māori were the majority. These interactions, particularly those with missionaries, helped to facilitate the treaty process. Also important were the international events and ideas of the time that informed the Crown's thinking and actions.

Mana was central to all political and economic relationships in traditional Māori society and has continued to shape internal and external interactions.

Pacific peoples have experienced Aotearoa New Zealand's colonial authority and control. Throughout these experiences, they have continued to sustain their cultures and assert their authority. The New Zealand Government has apologised to the people of Samoa for past injustices.

Tūrangawaewae me te kaitiakitanga Place and environment

Māori cared for and transformed te taiao, and expressed their connection to place by naming the land and its features.

Kōwhiringa ohaoha me te whai oranga Economic activity

Iwi and hapū experimented with new economic opportunities to enhance their mana. In doing so, they built extensive trading networks domestically and with Australia.

Do

In my learning in Aotearoa New Zealand's histories, I can:

- construct a narrative of cause and effect that shows relationships between events. By comparing examples over time, I can identify continuity or changes in the relationships. I can recognise that others might interpret these relationships differently
- use historical sources with differing perspectives on the past, giving deliberate attention to mātauranga Māori sources. I can recognise that the sources may not fully answer my questions, and that my answers are themselves interpretations
- make informed ethical judgements about people's actions in the past, basing them on historical evidence and taking account of the attitudes and values of the times, the challenges people faced, and the information available to them.

Years 7–8: Key knowledge

Key questions

Learning experiences

Whakapapa me te whanaungatanga | Culture and identity

Mid-twentieth-century Māori migration to New Zealand cities occurred at an unprecedented pace and scale, disrupting the whakapapa of te reo and tikanga and depopulating papa kāinga. New approaches to being Māori and retaining iwi values and practices were created and debated. Movements to reassert Māori language, culture, and identity arose throughout the country.

Over time people from a wide range of cultures have participated in and contributed to Aotearoa New Zealand, while retaining and adapting their distinctive identities. The histories of Chinese, Indian, and other Asian communities, Pacific communities, refugee and faith-based communities, disability communities, and the Deaf community demonstrate how this has been experienced. Some have met barriers.

Advocating for the right to citizenship and respect for difference has contributed to the development of a more diverse nation.

What were the challenges Māori faced after the Second World War? What do hapū and iwi say about their relocation to the cities and the reasons for it? What has this meant for their identity as Māori?

How and why have expressions of identity and belonging changed for different groups of people as they have participated in society? How has their participation helped form Aotearoa New Zealand? How have they understood and enacted their relationship with tangata whenua?

Historically, what opportunities and barriers have different groups experienced when participating in or contributing to Aotearoa New Zealand? How have they advocated for their rights?

Explore examples of:

- **data** that show the scale and pace of migration, and maps that show where population losses and gains occurred
- **whānau stories** from different places, periods of migration, and ages and genders to illustrate reasons for moving, experiences upon arrival, impacts on papa kāinga, and the adaptations Māori made to sustain culture and identity – cultural groups (e.g., Ngāti Pōneke Young Māori Club and Te Waka Huia), political groups (e.g., Ngā Tamatoa), tribal affiliate groups in cities (e.g., Tūhoe in Auckland, Wellington, and Hamilton; Waikato ki Roto o Pōneke), urban, pan-tribal marae (e.g., Hoani Waititi and Ngā Hau e Whā), and educational movements (e.g., kōhanga reo, kura kaupapa Māori, and wānanga).

Explore examples of:

- **experiences of different communities over time** (e.g., of early British, Irish, Chinese, and Indian migrant communities; of Pacific and Asian communities and communities from continental Europe, the Americas, and the African continent; of women and children; of the Deaf community and refugee, faith-based, disability, and minority communities)
- **forms of participation and contribution** – for example, *sociocultural* (e.g., through new ideas, new foods and cuisine, language and religious diversity; the creation of new arts, music, and fashions; sporting achievements and community organisations; greater global interconnectedness); *civic-political* (e.g., through volunteering, engaging with political processes, holding positions in government, and government organisations); and *economic* (e.g., through hard work, often in jobs others were not willing to do; new technologies, new products, business start-ups, and Pacific markets; entrepreneurship and new forms of expertise and ways of earning a living; the filling of skills shortages and sending of contributions back to communities of origin)
- **barriers to participation and contribution** – for example, racism, discrimination, exclusion, exploitation, language, housing, unemployment, and non-recognition of overseas qualifications
- **how communities retain personal and family connections with their place of origin** – for example, through language, correspondence, consuming cultural products, remembering events, remitting funds, newspapers, radio, television, social media, and ethnic and religious associations.

Tino rangatiratanga me te kāwanatanga | Government and organisation

The signings of He Whakaputanga o te Rangatiratanga o Nu Tireni | The Declaration of Independence and Te Tiriti o Waitangi | The Treaty of Waitangi emerged from a long period of complex interactions between hapū/iwi and newcomers in which Māori were the majority. These interactions, particularly those with missionaries, helped to facilitate the treaty process. Also important were the international events and ideas of the time that informed the Crown's thinking and actions.

Mana was central to all political and economic relationships in traditional Māori society and has continued to shape internal and external interactions.

Pacific peoples have experienced Aotearoa New Zealand's colonial authority and control. Throughout these experiences, they have continued to sustain their cultures and assert their authority. The New Zealand Government has apologised to the people of Samoa for past injustices.

What was the significance of He Whakaputanga o te Rangatiratanga o Nu Tireni | The Declaration of Independence? What factors influenced the Crown's decision to establish and sign Te Tiriti o Waitangi | The Treaty of Waitangi? How did Māori experiences with early newcomers influence their decision to sign Te Tiriti o Waitangi?

How was mana expressed in relationships between iwi and between iwi and Pākehā? How did iwi co-opt new ideas and technologies in the pursuit of mana, and what were some of the impacts of that? How did diseases brought by Europeans impact mana? How is mana evident in Māori protest actions?

What were Pacific peoples' experiences of Aotearoa New Zealand's colonial power in the Pacific? How did they continue to sustain their culture and assert their authority? What were the historical events behind the New Zealand Government's apology to Samoa in 2002?

Explore:

- **the significance of He Whakaputanga o te Rangatiratanga o Nu Tireni | The Declaration of Independence** – from the Crown's perspective, the Declaration guaranteed New Zealand's independence and freedom from foreign interference; from a Māori perspective, it continued to safeguard them from the challenges posed by European contact, it strengthened alliances with Great Britain, and it affirmed the existing authority of the chiefs
- **the wider context of the signing of Te Tiriti o Waitangi | The Treaty of Waitangi**
 - for the Crown, the Treaty reflected the strength of the humanitarian movement in British politics, while responding to pressure from investors, the immigration plans of the New Zealand Company, and the ongoing possibility of foreign interference
 - for iwi, the British Crown was a new element in the ongoing competition for mana. Prior to the Treaty, engaging and trading with Pākehā was about enhancing mana. There was a desire to continue this mutually beneficial trading relationship; a treaty that curbed Pākehā lawlessness ensured its ongoing viability. Also, prior to the Treaty Māori were coming to believe in the special bond and a partnership of equal status between chiefs and the Crown. The missionaries did not discourage the idea that this partnership would continue with the signing of Te Tiriti.

Explore examples of:

- **the complex and contested ways in which mana was expressed, enhanced, diminished, or restored**
 - for example, through pā, gift-giving, feasting, intermarriage, and conflict; and, for Moriori, the expression of mana through Nunuku's Law, and the renunciation of violence even in the face of great external challenges (the arrival of Europeans from the 1790s, and of Ngāti Tama and Ngāti Mutunga from 1835)
- **how, in the pursuit of mana, iwi and hapū co-opted new ideas and technologies** – for example, Christianity; literacy; iron tools to improve the production of food and materials and enhance cultural activities such as carving and tattooing; muskets (obtained from trading)
- **the impact on mana of diseases brought by Europeans** and the resulting widespread deaths, especially of leaders
- **the expression of mana in protest actions** – for example, by Hōne Heke at Kororāreka, by Te Maihāroa at Ōmarama, by Tohu Kākahi and Te Whiti-o-Rongomai of Parihaka, through deputations to England, by Whina Cooper and Te Roopu o te Matakitē hīkoi, at Bastion Point, and at the Raglan golf course.

Explore:

- **New Zealand's authority and control in Samoa** – the occupation of Samoa in 1914; the New Zealand administration's paternalistic attitude and mismanagement of the influenza epidemic in 1918, with a devastating impact on the Samoan people; the aggressive response from the New Zealand administration and the New Zealand Government to the Mau movement (e.g., on Black Saturday, 1929)
- **actions to preserve fa'a Sāmoa** in the face of New Zealand's colonial power – for example, the re-emergence of the Mau resistance movement and a campaign of non-violent resistance to assert Sāmoa mo Sāmoa; support for the Mau movement from prominent New Zealanders at the time (e.g., Sir Māui Pōmare and New Zealand Labour politicians)
- **New Zealand annexations** of the Cook Islands, Niue, and Tokelau
- **the 2002 apology** from the New Zealand Prime Minister to the nation of Samoa for actions taken during the New Zealand mandate – in particular, allowing the entry of the influenza-carrying Talune in 1918, Black Saturday in 1929, and the colonial administration's exiling of Samoan leaders and stripping of titles.

Years 7–8: Key knowledge

Key questions

Learning experiences

Tūrangawaewae me te kaitiakitanga | Place and environment

Māori cared for and transformed te taiao, and expressed their connection to place by naming the land and its features.

What practices of Māori transformed the natural environment? How did Māori express their kinship with and custodianship of the environment? How did naming features of the land express their connection with it?

Explore examples of:

- **modifications to the environment by Māori** – for example, burn-off and deforestation (e.g., of the lowland forests of the eastern South Island, and of 50 percent of both islands' forest cover by 1800), pā, eel weirs, and species depletion and loss (e.g., of moa and other bird species through hunting, egg collection, and the introduction of kiore and kurī)
- **how iwi gave expression to their world-view** of a deep kinship and holistic relationship between themselves and the natural world
- **how the Māori sense of custodianship of the environment** was defined by the concepts of whakapapa, manaakitanga, mauri, and kaitiakitanga – for example, through environmental management practices such as rāhui to allow food sources to recover, using the maramataka to guide planting and harvesting (e.g., with set times when godwits or eels could be caught), limits on fishing, harvesting only what was needed, laying mauri stones in gardens to protect resources, and leaving gardens fallow
- **naming as an expression of connection** to places, features of the natural environment, flora, and fauna.

Kōwhiringa ohaoha me te whai oranga | Economic activity

Iwi and hapū experimented with new economic opportunities to enhance their mana. In doing so, they built extensive trading networks domestically and with Australia.

What stories do iwi and hapū tell about their experiences with new economic activities? What opportunities and barriers were there? How did iwi adapt their economic activities to take advantage of opportunities presented by Pākehā and the international economy? What factors damaged Māori economic activity?

Explore examples of:

- **iwi and hapū adaptations to new economic opportunities** – for example, gold mining (e.g., guiding miners through passes to the West Coast, mining in the Aorere Valley), geothermal tourism, flour mills (e.g., in the Waikato, Taranaki, Whanganui, Rotorua, and Wairarapa), shipping (e.g., the purchase of vessels by iwi from the Bay of Islands, Hauraki, the Bay of Plenty, the East Coast, and Poverty Bay to transport essential produce for sustaining early European towns), and food production to supply growing European settlements (e.g., Nelson was entirely dependent on Māori for supplies; potatoes, wheat, and pigs were supplied to Wellington; Ngāi Tahu sold potatoes from Taieri and Moeraki at Ōtākou, near Dunedin)
- **damage to Māori economic activity** – for example, as a result of competition from steam-driven flour mills, the fall in the price of wheat and potatoes in Australia in the late 1850s, the impact of the New Zealand Wars, the blockading of Māori-controlled ports, the growing self-sufficiency of settlements, and the loss of fertile land due to confiscations and decisions of the Native Land Court.

Progress outcome by the end of year 10

Understand

Through building knowledge about contexts and drawing on inquiry practices, I have a broader and deeper understanding that:

- Māori history is the foundational and continuous history of Aotearoa New Zealand
- colonisation and settlement have been central to Aotearoa New Zealand's histories for the past 200 years
- the course of Aotearoa New Zealand's histories has been shaped by the use of power
- relationships and connections between people and across boundaries have shaped the course of Aotearoa New Zealand's histories.

Know

I have explored the diverse histories and experiences of the peoples of Aotearoa New Zealand.

I have built my knowledge of stories about the people, events, and changes that have been important in my local area, including knowledge of the stories iwi and hapū share about their history in the rohe.

For the national contexts, I know the following:

Whakapapa me te whanaungatanga Culture and identity

Since the mid-nineteenth century, immigration practices and laws have shaped Aotearoa New Zealand's population and sought to realise dominant cultural ideals and economic ends, including via Chinese goldminers, Indian and Scandinavian labourers, and Pacific workers.

Māori as tangata whenua were excluded from these cultural ideals, which they experienced as colonising and assimilating.

At different times, various groups have been marginalised in Aotearoa New Zealand. These groups have sought to remedy injustices associated with immigration policies and practices (e.g., through the Disability Action Group, the Polynesian Panthers, and petitions to governments). Governments have sometimes acknowledged these injustices (e.g., through the poll tax apology and the apology for the dawn raids).

Aotearoa New Zealand's participation in international conflicts over time reflects our changing view of our country's place in the world and our identity. Our remembrance of these conflicts and our honouring of those involved has evolved over time (e.g., the Crown apologised to Vietnam War veterans and their families for the way their service was not recognised).

Tino rangatiratanga me te kāwanatanga Government and organisation

The Crown asserted its power to establish a colonial state that in consequence diminished mana Māori. Over time, Māori have worked inside, outside, and alongside the Crown to renegotiate the colonial relationship with the Crown and to affirm tino rangatiratanga.

The Waitangi Tribunal investigation process and subsequent settlements by the Crown have provided an opportunity for reconciliation and greater engagement by non-Māori with the Treaty.

Aotearoa New Zealand's relationships with Pacific states since the Second World War have reflected its own interests. These have coincided at times with the interests of Pacific states.

Tūrangawaewae me te kaitiakitanga Place and environment

Settlers transformed and later cared for the natural world, and renamed places and features to reflect their own cultural origins.

Widespread public awareness and collective action about damage to the environment became most strongly evident in the late twentieth century (e.g., through Manapouri dam protests and the Māori-initiated Manukau Harbour claim).

Kōwhiringa ohaoha me te whai oranga Economic activity

Technological advancements developed the economy, along with state-supported land acquisition that impacted the Māori economy.

The New Zealand economy has both benefitted from and been vulnerable to the impacts of economic interdependence.

Do

In my learning in Aotearoa New Zealand's histories, I can:

- construct a narrative of cause and effect that shows relationships between events. By comparing examples over time, I can identify continuity or changes in the relationships. I can recognise that others might interpret these relationships differently
- use historical sources with differing perspectives and contrary views (including those that challenge my own interpretation), giving deliberate attention to mātauranga Māori sources. I can recognise that the sources available may not capture and fairly represent the diversity of people's experiences
- make informed ethical judgements about people's actions in the past, basing them on historical evidence and giving careful consideration to the complex predicaments people faced, what they knew and expected, the attitudes and values of the times, and my own attitudes and values.

Whakapapa me te whanaungatanga | Culture and identity

Since the mid-nineteenth century, immigration practices and laws have shaped Aotearoa New Zealand's population and sought to realise dominant cultural ideals and economic ends, including via Chinese goldminers, Indian and Scandinavian labourers, and Pacific workers.

Māori as tangata whenua were excluded from these cultural ideals, which they experienced as colonising and assimilating.

At different times, various groups have been marginalised in Aotearoa New Zealand. These groups have sought to remedy injustices associated with immigration policies and practices (e.g., through the Disability Action Group, the Polynesian Panthers, and petitions to governments). Governments have sometimes acknowledged these injustices (e.g., through the poll tax apology and the apology for the dawn raids).

Aotearoa New Zealand's participation in international conflicts over time reflects our changing view of our country's place in the world and our identity. Our remembrance of these conflicts and our honouring of those involved has evolved over time (e.g., the Crown apologised to Vietnam War veterans and their families for the way their service was not recognised).

How have government and public attitudes towards national identity and particular communities' contributions to it been expressed through immigration policies over time?

How have Māori as Treaty partners been involved in conversations and decisions about national identity and immigration laws? How have immigration laws and practices impacted on Māori and the different groups of people who have chosen to live here?

How have groups of people sought to remedy injustices associated with immigration policies and practices?

How has our involvement in international conflicts changed over time? How does this reflect our changing view of Aotearoa New Zealand's role in the world? What and who do we now remember and not remember? How does this shape our current ideas about national identity?

Explore examples of:

- **immigration schemes and policies** that show how the peopling of New Zealand was influenced by predominant views of the times (e.g., the Wakefield and Vogel schemes, assisted immigration following the First and Second World Wars; views of New Zealand as a 'fairer Britain of the South Seas' and a 'Better Britain'; dominant views of 'ideal' citizens as white, non-alien, able-bodied, and able-minded)
- **laws of the time controlling immigration** – for example, the Chinese Immigrants Act 1881, Imbecile Passengers Act 1882, Immigration Restriction Act 1899, Undesirable Immigrants Exclusion Act 1919, Immigration Restriction Amendment Act 1920, and Immigration Act 1987
- **the impact of these laws and contemporary views** – groups were excluded (e.g., the Chinese, the disabled), marginalised (e.g., Māori, who made up 95% of the population in 1840 and 5% in 1900), and discriminated against (e.g., Indians, Pacific communities), which generated resistance (e.g., via petitions, the Disability Action Group, and the Polynesian Panthers) and subsequent government apologies (e.g., for the Chinese poll tax and the dawn raids)
- **how changes in immigration policy** have transformed the ethnic make-up of Aotearoa New Zealand, evidenced by statistics, images, and personal experiences (e.g., the impact of the 1987 shift in focus to skills, family reunification, and refugee commitments).

Explore examples of:

- **New Zealand's participation in international conflicts**, in particular the First and Second World Wars, and the Vietnam War; other examples could include the South African War, the Korean War, and the Malayan Emergency
- **changing forms of participation** – for example, the shift from direct involvement in combat towards peacekeeping, social and economic development, and training; the shift from largely uncriticised, patriotic participation in the South African War and the First World War to greater conscription and a more significant home-front impact in the Second World War; the participation of professional military and the increasing inclusion of women; the shift from punishment and ostracism of the few who did not participate (e.g., for the First World War, conscientious objectors and Waikato iwi led by Te Puea Hērangi) to greater acceptance of public protest (e.g., against the Vietnam War), and to the 2008 Crown apology for the treatment of Vietnam War veterans
- **remembrance** – for example, the difference between our remembrance of international wars and the New Zealand Wars, with their past and continuing impact on Māori; remembering achievements and loss (e.g., the great sacrifice and willingness to do our duty in the First World War, the fight against fascism and militarism in the Second World War, and the service of the 28th Māori Battalion); how we are selective in our memories (e.g., the battle at Gallipoli compared with those at Passchendaele and the Somme, war in Europe and Africa compared with war in the Pacific, and the limited visibility of the contribution of Pacific, Chinese, and Indian troops to the New Zealand war effort); what we prefer to not remember (e.g., field punishments and Palestinian murders in the First World War, the Featherston prisoner-of-war-camp killings, and the Hautu Detention Camp).

Years 9–10: Key knowledge

Key questions

Learning experiences

Tino rangatiratanga me te kāwanatanga | Government and organisation

The Crown asserted its power to establish a colonial state that in consequence diminished mana Māori. Over time, Māori have worked inside, outside, and alongside the Crown to renegotiate the colonial relationship with the Crown and to affirm tino rangatiratanga.

The Waitangi Tribunal investigation process and subsequent settlements by the Crown have provided an opportunity for reconciliation and greater engagement by non-Māori with the Treaty.

Aotearoa New Zealand's relationships with Pacific states since the Second World War have reflected its own interests. These have coincided at times with the interests of Pacific states.

What were the causes of the New Zealand Wars? Where were they fought? Who was involved? How did they lead to iwi and hapū being alienated from their land? How was this alienation accelerated through law after the wars?

What were the different responses of iwi and Pākehā to the wars and their consequences? How have the attacks on Māori communities been remembered? How did large-scale Crown purchases lead to deprivation for South Island iwi and hapū?

What colonisation processes have shaped the history of our community? What claims have been made to the Waitangi Tribunal that reflect the impact of colonisation in our community? What process was followed, what did the Tribunal find, and what has been the outcome for the hapū and iwi involved? What are some of the differing perspectives on these claims?

Since the Second World War, how have Aotearoa New Zealand's relationships with Pacific states reflected its own interests? To what extent have these coincided with the interests of Pacific peoples?

Explore examples of:

- **episodes from the Waikato Wars** – other examples could include the Northern Wars, conflicts in Wellington and Whanganui, and the Taranaki War
- **the impact of legislation** – confiscations under the New Zealand Settlements Act 1863, and the establishment of individual titles for communal Māori land under the Native Lands Act 1865; other examples could include the Public Works Lands Act 1864, assimilation as a result of the Native Schools Act 1867, and the dispensing of trials for Parihaka participants via the Māori Prisoners Act 1880
- **the impact of land-buying policy** – almost the whole of the South Island was purchased extremely cheaply with virtually no benefit to tangata whenua; in many cases, promises to set aside reserves and build hospitals and schools were not kept
- **Māori attempts to remedy injustice and renegotiate the colonial relationship**, through working inside the Crown system (e.g., petitions to the Crown, the Young Māori Party, Rātana political candidates, and the Māori Party); alongside the Crown system (e.g., the 1860 Kohimarama conference, Kīngitanga, Kauhanganui parliament, Kotahitanga parliament, and Māori Women's Welfare League); and outside the Crown system (e.g., by Tītokowaru, Te Kooti, Te Ua Haumēne, Te Whiti-o-Rongomai and Tohu Kākahi from Parihaka, Rua Kēnana, and Te Maihāroa at Te Ao Mārama). By the twenty-first century, some Māori groups were also looking to the United Nations for support and recognition
- **Waitangi Tribunal investigations** and Crown settlements.

Explore examples of:

- **New Zealand's involvement with Pacific states**
 - for example, the granting of independence to Samoa in 1962 (part of a post-Second-World-War global trend towards decolonisation supported by the United Nations); the Treaty of Friendship, signed the same year, ensured a close political and economic relationship continued between the two countries
 - for example, through phosphate mining in Nauru, resistance to French nuclear testing, trade, seasonal employment opportunities, scholarships for Pacific sports people, the involvement of Pacific states in New Zealand's international wars, peacekeeping (e.g., in Bougainville and Timor-Leste), advocacy for democracy (e.g., in Fiji), and climate change advocacy.

Years 9–10: Key knowledge

Key questions

Learning experiences

Tūrangawaewae me te kaitiakitanga | Place and environment

Settlers transformed and later cared for the natural world, and renamed places and features to reflect their own cultural origins.

Widespread public awareness and collective action about damage to the environment became most strongly evident in the late twentieth century (e.g., through Manapouri dam protests and the Māori-initiated Manukau Harbour claim).

How did the natural environment affect settlers' cultural practices? How did they transform the environment? What motivated them to use it in these ways? What impacts did their actions have?

Who gets the right to name physical and cultural features? What do we do about people's different perspectives on place names?

What efforts have been made over time to conserve and regenerate the land and its beauty? What are some of the main historical examples of collective action in response to damage to the environment?

Explore examples of:

- **practices that transformed the landscape and impacted on ecosystems** – for example, burning forests; clearing bush, tussock, and wetland for fenced pasture; agriculture (e.g., sheep, beef, dairying, market gardening, and viticulture); the introduction of colonising plants (e.g., gorse) and animals (e.g., possums, rabbits, ferrets, deer, stoats, and weasels); exotic forest planting (e.g., of radiata pine on the Kāingaroa plains in the 1920s and 1930s); extractive industries (e.g., for gold, timber, and coal), with their associated 'boom and bust' transformation of places (e.g., the West Coast gold-rush towns of Ross, Hokitika, Kumara, Reefton); the building of railways, roads, and bridges, extending settlement into less accessible places and supporting the growth and spread of towns and cities
- **colonial naming and renaming** – the replacement of Māori names to claim ownership of places (e.g., provinces, towns, cities), features of the natural environment (e.g., mountains and rivers), and flora and fauna
- **the conservation of areas of natural beauty** – for tourism (e.g., the Pink and White Terraces, Fox Glacier, and the Whanganui River as the 'Rhine of the South'), for their cultural and scenic value (e.g., via the Wild Birds Protection Act 1864, the Scenery Preservation Act 1903, the establishment of the Forest and Bird Society and the Waipoua Forest Sanctuary), but with at times damaging consequences for Māori (e.g., through inadequate compensation, land confiscation, and denial of promised access)
- **environmental protection and collective action** – for example, soil conservation; the Manapouri dam project, which marked the beginning of widespread public awareness and a fundamental change in consciousness about how economic growth can have damaging environmental consequences; the Māori-initiated Manukau claim and the subsequent statutory allowance for Māori environmental concerns (e.g., via the Resource Management Act 1991).

Kōwhiringa ohaoha me te whai oranga | Economic activity

Technological advancements developed the economy, along with state-supported land acquisition that impacted the Māori economy.

The New Zealand economy has both benefitted from and been vulnerable to the impacts of economic interdependence.

How did the state help to create and manage the developing international economy? Who did this benefit, and how?

In what ways has the New Zealand economy been vulnerable to influences from the international economy over time? How has New Zealand attempted to adapt to these influences, and with what success?

Explore examples of:

- **the state's management of a developing international economy to support growth** – for example, through technological advancements (e.g., refrigeration) supported by big government borrowing for infrastructure development (e.g., of roads, rail, bridges, and harbours)
- **the state's management of the economy in ways that damaged the Māori economy** – for example, through land transfers to Pākehā, confiscations, the Native Land Court, and the Public Works Lands Act 1864; and through state support for Pākehā (e.g., the Vogel scheme, the Land for Settlements Act 1894, and the Government Advances to Settlers Act 1894, which provided financial support to Pākehā farmers but not to Māori)
- **the vulnerability of New Zealand to the international economy** – for example, as evidenced by our heavy dependence on agricultural products and almost sole reliance on exports to Britain; by boom periods of wealth (e.g., from the mid-1890s to the First World War, and in the 1950s); by the impacts of the Long Depression of the 1870s and 1880s and of the Great Depression of the 1930s; by the oil crisis of 1973; by the restriction on exports when Britain joined the European Union in 1973, and the resulting challenge of broadening our export markets; and by large-scale deregulation in the 1980s, with severe impacts on many formerly protected sectors of the economy (e.g., farming and public services such as railways and post offices).

Progressions across year levels

Understand

Big ideas

The big ideas for Aotearoa New Zealand's histories don't change across year levels. Rather, students gradually deepen their understanding of the ideas as their knowledge of national, rohe, and local contexts grows and as they develop their use of inquiry practices to think critically about the past. Teachers support this growth and development through their design of rich learning opportunities. At years 11–13, students deepen their understandings through subjects that draw from Aotearoa New Zealand's histories.

Years 1–3 (Foundation)

Through building knowledge about contexts and drawing on inquiry practices, I am beginning to understand the four big ideas:

Years 4–6

Through building knowledge about contexts and drawing on inquiry practices, I have a deeper understanding of the four big ideas:

Years 7–8

Through building knowledge about contexts and drawing on inquiry practices, I have a broader and deeper understanding of the four big ideas:

Years 9–10

Through building knowledge about contexts and drawing on inquiry practices, I have a broad and deep understanding of the four big ideas:

E kore au e ngaro; he kākano i ruia mai i Rangiātea.

We know who we are and where we come from; therefore we can move forward with confidence.

Māori history is the foundational and continuous history of Aotearoa New Zealand.

Māori have been settling, storying, shaping, and have been shaped by these lands and waters for centuries. Māori history forms a continuous thread, directly linking the contemporary world to the past. It is characterised by diverse experiences for individuals, hapū, and iwi within underlying and enduring cultural similarities.

Kaua e uhia Te Tiriti o Waitangi ki te kara o Ingarangi. Engari me uhi anō ki tōu kahu Māori, ki te kahu o tēnei motu ake.

Do not drape The Treaty of Waitangi with the Union Jack of England, but rather with your Māori cloak, which is of this country.
(Āperahama Taonui, 1863)

Colonisation and settlement have been central to Aotearoa New Zealand's histories for the past 200 years.

The settlement of Aotearoa New Zealand has contributed to an increasingly diverse population, with many languages and cultures now part of its fabric.

Colonisation began as part of a worldwide imperial project. It has been a complex, contested process, experienced and negotiated differently in different parts of Aotearoa New Zealand over time. Aotearoa New Zealand has also colonised parts of the Pacific.

Ko te pipi te tuatahi, ko te kaunuku te tuarua.

People use their agency to respond to injustice.

The course of Aotearoa New Zealand's histories has been shaped by the use of power.

Individuals, groups, and organisations have exerted and contested power in ways that improve the lives of people and communities, and in ways that lead to exclusion, injustice, and conflict.

Tuia i runga, tuia i raro, tuia i waho, tuia i roto, tuia te muka tāngata.

People can achieve a common goal when connected through relationships and knowledge.

Relationships and connections between people and across boundaries have shaped the course of Aotearoa New Zealand's histories.

People in Aotearoa New Zealand have been connected locally, nationally, and globally through voyaging, discovery, trade, aid, conflict, and creative exchanges. This has led to the adoption of new ideas and technologies, political institutions and alliances, and social movements.

Know

Whakapapa me te whanaungatanga Culture and identity

This context focuses on how the past shapes who we are today – our familial links and bonds, our networks and connections, our sense of obligation, and the stories woven into our collective and diverse identities.

At years 11–13, for all four contexts students continue to build their knowledge through subjects that draw from Aotearoa New Zealand’s histories.

Years 1–3 (Foundation)

Māori are tangata whenua. They were the first people of this land and have stories about their origins and arrival.

People in our area have come from a variety of places and some retain connections to those places.

Years 4–6

The stories of groups of people from different periods in our history convey their reasons for and experiences of migration. These stories have shaped their culture and identity in Aotearoa New Zealand.

Māori voyaging through the Pacific was deliberate and skilful and brought with it Pacific whakapapa and cultural identities. These identities were transformed over the centuries through adaptations to and relationships with the environment, and through the formation of hapū and iwi that eventually occupied Aotearoa New Zealand.

Individuals and communities have responded to international conflicts in a range of ways for a range of reasons.

Years 7–8

Mid-twentieth-century Māori migration to New Zealand cities occurred at an unprecedented pace and scale, disrupting the whakapapa of te reo and tikanga and depopulating papa kāinga. New approaches to being Māori and retaining iwi values and practices were created and debated. Movements to reassert Māori language, culture, and identity arose throughout the country.

Over time people from a wide range of cultures have participated in and contributed to Aotearoa New Zealand, while retaining and adapting their distinctive identities. The histories of Chinese, Indian, and other Asian communities, Pacific communities, refugee and faith-based communities, disability communities, and the Deaf community demonstrate how this has been experienced. Some have met barriers.

Advocating for the right to citizenship and respect for difference has contributed to the development of a more diverse nation.

Years 9–10

Since the mid-nineteenth century, immigration practices and laws have shaped Aotearoa New Zealand’s population and sought to realise dominant cultural ideals and economic ends, including via Chinese goldminers, Indian and Scandinavian labourers, and Pacific workers.

Māori as tangata whenua were excluded from these cultural ideals, which they experienced as colonising and assimilating.

At different times, various groups have been marginalised in Aotearoa New Zealand. These groups have sought to remedy injustices associated with immigration policies and practices (e.g., through the Disability Action Group, the Polynesian Panthers, and petitions to governments). Governments have sometimes acknowledged these injustices (e.g., through the poll tax apology and the apology for the dawn raids).

Aotearoa New Zealand’s participation in international conflicts over time reflects our changing view of our country’s place in the world and our identity. Our remembrance of these conflicts and our honouring of those involved has evolved over time (e.g., the Crown apologised to Vietnam War veterans and their families for the way their service was not recognised).

Knowledge in relation to stories iwi and hapū tell about their history in the rohe, to stories told about the people, events, and changes

that have been important in the local area, and to student-led inquiries into the history of the rohe and local area.

Knowledge in relation to the diverse histories and experiences of early British, Irish, Chinese, and Indian migrants; of Pacific and Asian communities and communities from continental Europe, the

Americas, and the African continent; of women and children; of the Deaf community and refugee, faith-based, disability, and minority communities.

Know

Tino rangatiratanga me te kāwanatanga Government and organisation

This context focuses on the history of authority and control, and the contests over them. At the heart of these contests are the authorities guaranteed by Te Tiriti o Waitangi | The Treaty of Waitangi. This context also considers the history of the relationships between government agencies and the people who lived here and in the Pacific.

Years 1–3 (Foundation)

Waitangi Day marks the significance of the initial signing of Te Tiriti o Waitangi | The Treaty of Waitangi. We recall what happened at Waitangi at the time of the signing and who was there. This helps us understand why we have a holiday.

Years 4–6

Te Tiriti o Waitangi | The Treaty of Waitangi was signed in different places. The two versions of the Treaty say different things about who would have authority. Māori understandings were based on the version in te reo Māori, which the vast majority of Māori signed.

Governments have selectively supported or excluded people through processes associated with voting rights, access to education, health, and welfare provision, reflecting prevailing public attitudes of the time. Often equitable treatment has been sought by people, including Māori, Chinese, women, children, and disabled people.

Years 7–8

The signings of He Whakaputanga o te Rangatiratanga o Nu Tireni | The Declaration of Independence and Te Tiriti o Waitangi | The Treaty of Waitangi emerged from a long period of complex interactions between hapū/ iwi and newcomers in which Māori were the majority. These interactions, particularly those with missionaries, helped to facilitate the treaty process. Also important were the international events and ideas of the time that informed the Crown's thinking and actions.

Mana was central to all political and economic relationships in traditional Māori society and has continued to shape internal and external interactions.

Pacific peoples have experienced Aotearoa New Zealand's colonial authority and control. Throughout these experiences, they have continued to sustain their cultures and assert their authority. The New Zealand Government has apologised to the people of Samoa for past injustices.

Years 9–10

The Crown asserted its power to establish a colonial state that in consequence diminished mana Māori. Over time, Māori have worked inside, outside, and alongside the Crown to renegotiate the colonial relationship with the Crown and to affirm tino rangatiratanga.

The Waitangi Tribunal investigation process and subsequent settlements by the Crown have provided an opportunity for reconciliation and greater engagement by non-Māori with the Treaty.

Aotearoa New Zealand's relationships with Pacific states since the Second World War have reflected its own interests. These have coincided at times with the interests of Pacific states.

Knowledge in relation to stories iwi and hapū tell about their history in the rohe, to stories told about the people, events, and changes

that have been important in the local area, and to student-led inquiries into the history of the rohe and local area.

Know

Tūrangawaewae me te kaitiakitanga

Place and environment

This context focuses on the relationships of individuals, groups, and communities with the land, water, and resources, and on the history of contests over their control, use, and protection.

Years 1–3 (Foundation)

Tangata whenua are deeply connected to the local area. Naming places was key to establishing and maintaining mana and tūrangawaewae.

Many of the names of geographical features, towns, buildings, streets, and places tell stories. Sometimes there is more than one story.

Years 4–6

People adapted their technologies and tools to the new environment of Aotearoa New Zealand.

Years 7–8

Māori cared for and transformed te taiao, and expressed their connection to place by naming the land and its features.

Years 9–10

Settlers transformed and later cared for the natural world, and renamed places and features to reflect their own cultural origins.

Widespread public awareness and collective action about damage to the environment became most strongly evident in the late twentieth century (e.g., through Manapouri dam protests and the Māori-initiated Manukau Harbour claim).

Knowledge in relation to stories iwi and hapū tell about their history in the rohe, to stories told about the people, events, and changes

that have been important in the local area, and to student-led inquiries into the history of the rohe and local area.

Americas, and the African continent; of women and children; of the Deaf community and refugee, faith-based, disability, and minority communities.

Know

Kōwhiringa ohaoha me te whai oranga Economic activity

This context focuses on the choices people made to meet their needs and wants, how they made a living individually and collectively, and the resulting exchanges and interconnections.

Years 1–3 (Foundation)

The ways different groups of people have lived and worked in this rohe have changed over time.

Years 4–6

Traditional Māori economies were finely tuned to the resources within each rohe, which provided the basis for trade between iwi. There were complicated economic relationships between iwi and early newcomers as newcomers sought resources.

Knowledge in relation to stories iwi and hapū tell about their history in the rohe, to stories told about the people, events, and changes

Knowledge in relation to the diverse histories and experiences of early British, Irish, Chinese, and Indian migrants; of Pacific and Asian communities and communities from continental Europe, the

Years 7–8

Iwi and hapū experimented with new economic opportunities to enhance their mana. In doing so, they built extensive trading networks domestically and with Australia.

that have been important in the local area, and to student-led inquiries into the history of the rohe and local area.

Years 9–10

Technological advancements developed the economy, along with state-supported land acquisition that impacted the Māori economy.

The New Zealand economy has both benefitted from and been vulnerable to the impacts of economic interdependence.

Do**Thinking critically about the past and interpreting stories about it**

When exploring Aotearoa New Zealand's histories as part of social science inquiries, students use three practices for thinking critically about the past and interpreting stories about it.

At years 11–13, students continue to use these practices in subjects that draw from Aotearoa New Zealand's histories.

Years 1–3 (Foundation)**Years 4–6****Years 7–8****Years 9–10****Identifying and exploring historical relationships**

The construction of narratives about the past is based on the ability to sequence events and changes and to identify historical relationships between them and how long ago

I can retell a story from the past and talk about how other people might tell it differently.

I can construct an historical sequence of related events and changes, show how long ago they happened, and say how other people might construct the sequence differently.

they happened. Depending on who is telling the story, the same story can be told in different ways.

I can construct a narrative of cause and effect that shows relationships between events. By comparing examples over time, I can identify continuity or changes in the relationships. I can recognise that others might interpret these relationships differently.

I can construct a narrative of cause and effect that shows relationships between events. By comparing examples over time, I can identify continuity or changes in the relationships. I can recognise that others might interpret these relationships differently.

Identifying sources and perspectives

Drawing on a broad base of historical sources, in varied forms, provides a fuller and layered understanding of the past. This includes paying deliberate attention to mātauranga Māori

sources and approaches. When drawing evidence from sources, it is important to consider authorship and purpose and to identify voices that are missing.

I can use historical sources, giving deliberate attention to mātauranga Māori sources, to help answer my questions about the past.

I can use historical sources, giving deliberate attention to mātauranga Māori sources, to gather evidence to answer my questions about the past. I can identify views that are missing and note how this may affect my answers.

I can use historical sources with differing perspectives on the past, giving deliberate attention to mātauranga Māori sources. I can recognise that the sources may not fully answer my questions, and that my answers are themselves interpretations.

I can use historical sources with differing perspectives and contrary views (including those that challenge my own interpretation), giving deliberate attention to mātauranga Māori sources. I can recognise that the sources available may not capture and fairly represent the diversity of people's experiences.

Interpreting past experiences, decisions, and actions

Interpretations of people's past experiences, decisions, and actions need to take account of the attitudes and values of the time and people's predicaments and points of view. By using

these interpretations and reflecting on our own values, we can make evidence-based ethical judgements about the past.

I can make observations about how people have acted in the past and how they act today.

I can identify the attitudes and values that motivated people in the past and compare them with attitudes and values of today.

I can make informed ethical judgements about people's actions in the past, basing them on historical evidence and taking account of the attitudes and values of the times, the challenges people faced, and the information available to them.

I can make informed ethical judgements about people's actions in the past, basing them on historical evidence and giving careful consideration to the complex predicaments people faced, what they knew and expected, the attitudes and values of the times, and my own attitudes and values.

We **shape** an **education** system that delivers
equitable and **excellent outcomes**

The school curriculum

(developed by schools and communities)

School's Strategic Plan, Annual Implementation Plan, and Annual Report

The New Zealand Curriculum (NZC)

Secondary legislation via gazetting, made under [ETA s90](#), and comprising:

Foundation Curriculum Policies

(Gazette Notice [2009-go8817](#), [2023-go5904](#))

Each board who has chosen* to implement the NZC must, through the principal and staff, develop a curriculum for Years 1-13 that:

- › is guided by the Vision
- › is underpinned by the Principles
- › ensures the Values are encouraged, modelled, and explored by students
- › supports students to develop the five Key Competencies
- › meets requirements for structuring teaching time for reading, writing and maths in Years 0 to 8.

National Curriculum Statements

(Gazette Notice [2009-go8814](#))

State schools are to provide teaching and learning programmes based on statements for¹:

- › The Arts
- › English
- › Mathematics & Statistics
- › Science
- › Health & Physical Education
- › Social Sciences²
- › Technology³.

¹ All statements are updated in Gazette Notice [2023-go5904](#)

² Updated in Gazette Notice [2022-go4492](#).

³ Updated in Gazette Notice [2017-go6474](#).

The Statement of National Education & Learning Priorities (NELP)

Issued under [ETA s5](#)

Board's responsibilities to evaluate and report performance:

- › Reporting of individual student performance (to students and their parents).
- › Reporting on the performance of the school's students (publicly and to the Ministry).

Requirements of Boards:

- › Objectives of Boards: [ETA s127](#)
- › Strategic Planning and Reporting Requirements: [ETA ss134-146](#)
- › Responsibility to consult about the delivery of the health curriculum: [ETA s91](#)

The Education & Training Act 2020 (ETA)

The Treaty of Waitangi | Te Tiriti o Waitangi and its principles

Te Tāhuhu o te Mātauranga
Ministry of Education

* This diagram describes the settings for the NZC. The legislative framework for *Te Marautanga o Aotearoa* is online: [Te Marautanga o Aotearoa | Kauwhata Reo](#) and [Te Marautanga o Aotearoa \(education.govt.nz\)](#). Schools must choose to develop and implement a curriculum based on either the NZC or *Te Marautanga o Aotearoa*. If a school has a bilingual class or classes where Māori is one of the languages of instruction, it may develop and implement a curriculum based on *Te Marautanga o Aotearoa* for those classes, and on the NZC for the rest of the school, in Gazette Notice: [2009-go8817](#).

Requirements for boards (Transitional statement, in effect until 1st January 2027)

A board's primary objectives¹ in governing a school are to ensure:

- Every student is able to attain their highest possible standard in educational achievement
- The school:
 - Is physically and emotionally safe
 - Gives effect to relevant student rights
 - Takes all reasonable steps to eliminate racism, stigma, bullying and any other forms of discrimination within the school
- The school is inclusive of, and caters for, students with differing needs, and
- The school gives effect to Te Tiriti o Waitangi, including by –
 - Working to ensure that its plans, policies, and local curriculum reflect local tikanga Māori, mātauranga Māori, and te ao Māori; and
 - Taking all reasonable steps to make instruction available in tikanga Māori and te reo Māori; and
 - Achieving equitable outcomes for Māori students.

To meet its primary objectives, a board must have particular regard to the National Education and Learning Priorities (NELP)² and ensure the school's principal and staff develop and implement a curriculum for students in years 1-13^{3,4}:

- That is guided by the Vision set out on page 8
- That is underpinned by the Principles set out on page 9
- In which the Values set out on page 10 are encouraged and modelled and explored by students
- That supports students to develop the five Key Competencies set out on pages 12-13
- That provides all students with effectively taught learning and teaching programmes in the learning areas listed below.
 - English, as specified on page 18
 - the Arts as specified on pages 20-21
 - Health and Physical Education, as specified on pages 22-23. Also, at least once every 2 years, after consulting the school community, the board must adopt a statement on the delivery of the health curriculum⁵
 - Mathematics and Statistics, as specified on page 26
 - Science, as specified on pages 29-29
 - Technology, as specified at The New Zealand Curriculum - Technology; and

- Social Sciences including Aotearoa New Zealand histories, as specified at The New Zealand Curriculum - Social sciences and
- Meets requirements for structuring teaching time for reading, writing and maths in Years 0 to 8⁶.

Changes have been made to how boards plan and report their performance (Education and Training Act 2020, ss 134-146 and Education (School Planning and Reporting) Regulations 2023. These changes came into effect on 1 January 2023 and 1 August 2023 respectively. The broad aims of the changes are to ensure boards are focused on meeting their primary objectives, giving effect to Te Tiriti o Waitangi, and having particular regard to the NELP.

Each board must:

- Have
 - a 3 year strategic plan developed in consultation with their school community, that sets out how the board will meet their primary objectives (set out in the Education and Training Act 2020).
 - an annual implementation plan that sets annual targets and actions for working towards their strategic goals
 - an annual report that reports on the school's finances and progress over the last year including:
 - An evaluation and analysis, in plain language, of the school's students' progress and achievement as assessed across any foundation curriculum policy statements and national curriculum statements, and based on good quality assessment information
 - A report on how the board has given effect to Te Tiriti o Waitangi, including the progress and achievement of Māori students and the progress made towards making instruction available in tikanga and te reo Māori
- noting:
 - a board's first strategic plan for its school only has a life-span of 2 years. The first strategic plan under the Education (school planning and reporting) Regulations 2023, must be prepared to take effect from 1 January 2024, and the second one must be prepared to take effect from 1 January 2026
 - detailed content requirements for the strategic and annual implementation plans and annual reports are further outlined in the Regulations
- Ensure the strategic plan is submitted to the Secretary of Education and published before 1 March in the year in which the plan takes effect

- Ensure the annual implementation plan is prepared and published before 31 March each year
- Ensure the school's principal and staff monitors and evaluate the performance of the school's students in relation to, at least, the curriculum and any qualifications system offered at the school
- Ensure information about a student's performance is given to the student and a parent in a timely manner (at least twice a year) and in a form that is readily understandable (written in plain language). Information about the student's performance must be across the curriculum, and in literacy and mathematics, and based on good quality assessment information; and
- Further guidance is available at Schools' planning and reporting

Developing and delivering a high-quality school curriculum is at the heart of board planning for their school. In their first strategic plans, boards should be planning for successful implementation of the refreshed national curriculum.

Further guidance about the curriculum

When designing and reviewing their curriculum, schools select achievement objectives from each learning area in response to the identified interests and learning needs of their students. For learning in digital technologies, schools need to provide teaching and learning opportunities in line with the progress outcomes from the technology learning area. For learning in Aotearoa New Zealand's Histories (part of Social Sciences), schools need to provide teaching and learning opportunities that weave together what students need to Understand Know and Do and support progression in line with progress outcomes.

All schools with students in years 7-10 should be working towards offering students opportunities for learning a second or subsequent language. Teaching programmes should be based on the learning languages statement found on pages 24-25 and the achievement objectives for this learning area. Teaching programmes for students in years 11-13 should be based, in the first instance, on the appropriate national curriculum statements.

Transition to refreshed national curriculum

As described at [New Zealand Curriculum Refresh](#), the New Zealand Curriculum is being updated. The timelines for implementation are:

- Term 1, 2025 – Schools and kura will need to teach the updated English learning area for Years 0 to 6.

- Term 1, 2026 – Schools and kura will need to teach the updated English learning area for Years 7 to 13, and mathematics and statistics learning area for Years 0 to 13.
- 2027 – The full updated national curriculum will be required. This includes the other learning areas: science, technology, health and PE, learning languages, the arts, and social sciences.

Schools and kura will have an opportunity to review the new content before it is finalised.

As Learning Areas are released, boards, principals, teachers and schools should become familiar with the content, and plan for how they will implement the new curriculum.

Resources to support schools and kura in teaching the new content will be developed and made available by the Ministry before the new requirements begin.

Reading, writing and maths teaching time requirements added to all existing National Curriculum Statements for the New Zealand Curriculum

December 2023

The teaching and learning of reading, writing and maths¹ is a priority for all schools. So that all students are getting sufficient teaching and learning time for reading, writing and maths, each school board with students in Years 0 to 8 must, through its principal and staff, structure their teaching and learning programmes and/or timetables for delivering the National Curriculum Statements, including this one, to provide:

- 10 hours a week of teaching and learning focussed on supporting their progress and achievement in reading and writing in a typical school week, recognising the important contribution oral language development makes, particularly in the early phases of learning.
- 5 hours a week of teaching and learning focussed on supporting their progress and achievement in maths in a typical school week.

Where reading, writing and/or maths teaching and learning time is occurring within the context of National Curriculum Statements other than English or mathematics and statistics, progression of students' reading, writing and/or maths dispositions, knowledge and skills at the appropriate level must be explicitly and intentionally planned for and attended to.

While the terms reading and writing are used, these expectations are inclusive of alternative methods of communication, including New Zealand Sign Language, augmentative and alternative communication (AAC) and Braille.

¹ For simplicity, 'maths' is used as an all-encompassing term to refer to the grouping of subject matter, dispositions, skills, competencies, and understandings that encompass all aspects of numeracy, mathematics, and statistics.

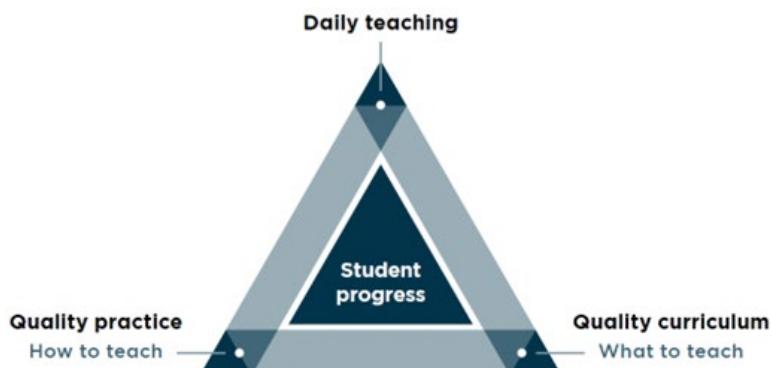

Structuring teaching time for reading, writing and maths foundation curriculum policy statement for The New Zealand Curriculum

Added December 2023

Students develop their dispositions, knowledge, and skills in reading, writing, and maths when this learning is explicitly taught as students engage with the content of all the learning areas set out in the national curriculum statements for The New Zealand Curriculum. While the terms reading and writing are used, these expectations are inclusive of alternative methods of communication, including New Zealand Sign Language, augmentative and alternative communication (AAC) and Braille.

As Figure 1 shows, students progress best when they have daily opportunities to learn this content through the evidence-informed, high-quality approaches and teaching practices. Teachers maximise student progress when they have comprehensive understanding and knowledge of curriculum content and effective teaching practices.

Figure 1: Maximising student progress

Designing teaching and learning programmes that support the progress and achievement of all students requires consideration of all three of these aspects.

Explicit teaching of reading, writing, and maths is a priority

The teaching and learning of reading, writing, and maths¹ is a priority for all schools using The New Zealand Curriculum. So that all students are getting sufficient teaching and learning time for reading, writing, and maths, each school board with students in Years 0 to 8 must, through its principal and staff, structure their teaching and learning programmes and/or timetables to provide for daily teaching as set out in the National Curriculum Statements for the New Zealand Curriculum.

Daily teaching time requirements are also inclusive of expectations to monitor student progress and achievement through high quality assessment information, so student participation in formal assessment activities will form part of teaching time in some weeks.

¹ For simplicity, ‘maths’ is used as an all-encompassing term to refer to the grouping of subject matter, skills, competencies, and understandings that encompass all aspects of numeracy, mathematics, and statistics.

Deliberately design teaching and learning programmes to provide for daily teaching

Principals and teachers will need to consider the balance of time provided as dedicated reading, writing, or maths blocks/lessons with time spent developing students' reading, writing, and maths dispositions, knowledge and skills within the context of all learning areas. This balance will vary by age and phase of learning, the specific needs of each student, and by each school's approach to curriculum design. Similarly, dedicated blocks/lessons may consist of a full hour or be broken up into smaller blocks or lessons at the class level or for specific students if they would benefit from smaller and more manageable chunks of learning over their day.

Where reading, writing, and/or maths teaching and learning time is occurring within the context of national curriculum statements other than mathematics and statistics or English, progression of students' reading, writing and/or maths knowledge and skills at the appropriate level must be explicitly and intentionally planned for and attended to.

Accommodate the specific needs of individual students where needed

Education in all schools must be responsive to the specific needs of individual students, providing appropriate accommodations and supports that enable all students to access, engage and succeed in reading, writing and maths. For a small number of students, it may be in their best interests for their hours of reading, writing and/or maths learning to be varied from these requirements for a period of time. This should only be done in partnership with them and/or their family as part of a student's individual education plan where appropriate and agreed to by themselves and their family.

Provide transparency to the school community

School boards need to provide their school community with information on how they are making sure they are meeting teaching time requirements. For example, in their annual strategic plan reporting and/or on their website.

While most schools may be able to explain this in terms of a 'standardised' approach at the class level, the nature of provision in Te Aho o Te Kura Pounamu and specialist schools means that may not be possible due to the greater individualisation of student programmes. In these cases, school boards will need to describe the approach they are taking to make sure that the teaching time requirements for reading, writing and maths are taken into account in the design of students' programmes.
